®

ACTUATORS

ELECTRIC CYLINDER SERIES ELEKTRO ISO 15552

An electric cylinder with a connection interface in accordance with ISO 15552.

The piston rod extension is controlled by a system with a hardened screw and recirculating ball screw nut. The piston has a guide strip calibrated to reduce to a minimum play with the barrel and hence vibration during ball screw rotation.

The cylinder can be equipped with a built-in non-rotating system featuring two opposing slides that run in separate longitudinal slots in the barrel.

The piston comes with magnets and the barrel has longitudinal slots for housing sensors. The piston rod has increased outside diameter and thickness to make it extra rigid and more resistant to radial and peak loads.

A system for greasing the screws is included. Numerous standard accessories for pneumatic cylinders, can be used for mounting the cylinder. Accessories made of aluminium, or made of steel for heavy-duty operations, can be used.

The motor can be selected from an optimised range, which encompasses both STEPPING and BRUSHLESS motors.

There is a version with a brake mounted on the motor.

Stepper motors are also available with a brake and encoder (all BRUSHLESS motors come with an encoder). It is important to remember that the brake is static type, so the motor must be stopped before the brake is engaged.

There is a version for in-line assembly, where the drive shaft is jointed directly onto the screw. There is also a geared motor version, where

transmission is provided by pulleys and a cog belt with a transmission ratio of 1:1.

A planetary gear box, in the case of a Ø 100 in-line cylinder, and pulleys with a non-unitary gear ratio, in the case of a Ø 80 and Ø 100 cylinder, can be used to increase the torque. Suitable motor drives are provided.

Special adaptor flanges and joints can be provided if the customer wishes to use a particular brand of motor.

**N.B.: A piston rod anti-rotation system must be used. If the piston rod is not fixed firmly to an element, a flange or to any other device preventing it from rotating, a cylinder in the anti-rotation version must be used.**

in-line version

geared version

## TECHNICAL DATA

	Ø 32	Ø 50	Ø 63 - 63 HD	Ø 80	Ø 100
Piston rod thread	M10x1.25	M16x1.5	M16x1.5		M20x1.5
Environmental temperature range for STEPPING motors BRUSHLESS motors	°C		from -10 to +50 from 0 to +40

● in line with gear box

The total mass moment of inertia ( $J_{tot}$ ) reduced for the motor is:  $J_{tot} = [J_1 \cdot \text{corso [m]} + J_2 \cdot (\text{Carico [kg]} + M_x [\text{kg}]) + J_0] \cdot \tau^2 + J_3$   
 $M_x$  is defined in the weight table.

## CALCULATION OF MEAN AXIAL LOAD $F_m$ AND VERIFICATION

Peak axial load in a work cycle must not exceed the static axial load  $F_o$ . The peak value is usually achieved during upward acceleration in vertical installation. Exceeding this value leads to greater wear and hence shorter life of the recirculating ball screw.

### Mean axial load $F_m$

$$F_m = \sqrt{\sum F_x^3 \times \frac{V_x}{V_m} \times \frac{q}{100}} =$$

$$F_m = \sqrt{F_{x1}^3 \times \frac{V_{x1}}{V_m} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{V_{x2}}{V_m} \times \frac{q_2}{100} + F_{x3}^3 \times \frac{V_{x3}}{V_m} \times \frac{q_3}{100} + \dots}$$

$F_x$  = Axial load at stage x

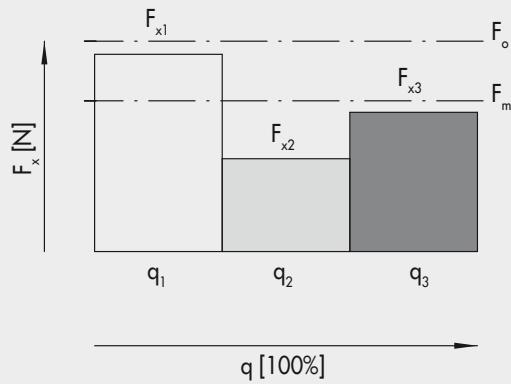

$F_m$  = Mean axial load during extension

$F_o$  = Static axial load

q = Time segment

$V_x$  = Speed in the phase x

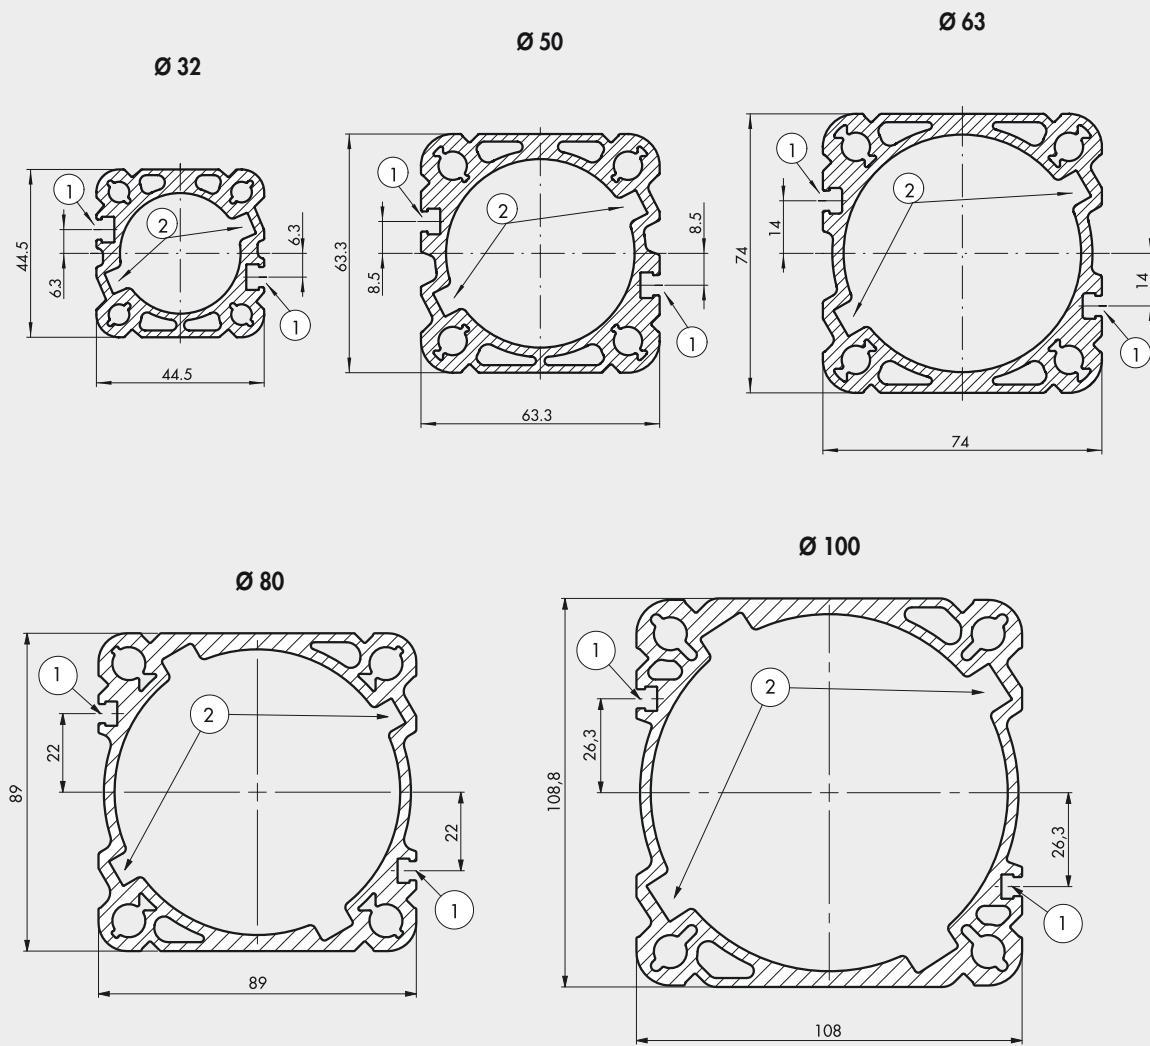

$V_m$  = Average speed

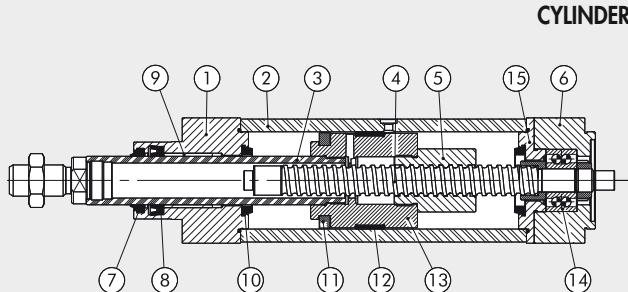

The mean axial load must not exceed the dynamic axial load:  $F_m \leq F$

The graphs on page 1-462 show screw life as a function of  $F_m$

## BARREL CROSS SECTION

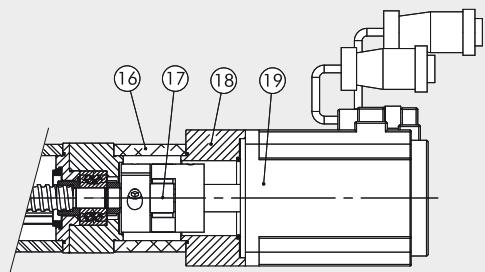

## COMPONENTS

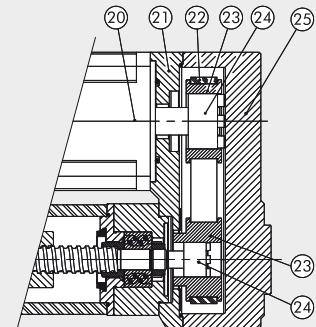

- ① FRONT CYLINDER HEAD: anodised aluminium
- ② BARREL: extruded and anodised aluminium alloy
- ③ PISTON ROD: grinded chrome steel
- ④ WORM SCREW: hardened steel
- ⑤ BALL SCREW: steel
- ⑥ REAR CYLINDER HEAD: anodised aluminium
- ⑦ WIPER RING: polyurethane
- ⑧ PISTON ROD GASKET: NBR (IP55/ IP65 version only)
- ⑨ GUIDE BUSHING: steel strip with bronze and PTFE insert
- ⑩ BUFFER: technopolymer
- ⑪ MAGNET: plastoferrite
- ⑫ GUIDE STRIP: self-lubricated calibrated technopolymer
- ⑬ PISTON: aluminium
- ⑭ BEARING: oblique with two ball rings
- ⑮ BEARING LOCKING RING: anodised aluminium
- ⑯ BELL: extruded and anodised aluminium alloy
- ⑰ COUPLING
- ⑱ ADAPTOR PLATE: anodised aluminium
- ⑲ ELECTRIC MOTOR
- ⑳ ELECTRIC MOTOR
- ㉑ TRANSMISSION PLATE: anodised aluminium
- ㉒ DRIVE BELT
- ㉓ PULLEY: steel
- ㉔ SHRINK DISC
- ㉕ COVER: anodised aluminium
- ㉖ PLANETARY GEAR BOX

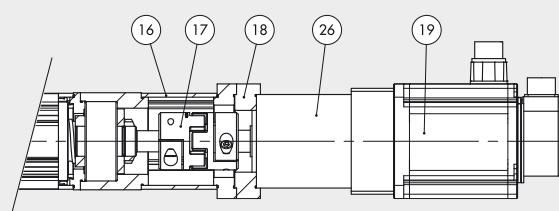

## CYLINDER WITH IN-LINE MOTOR

## CYLINDER WITH GEARED MOTOR

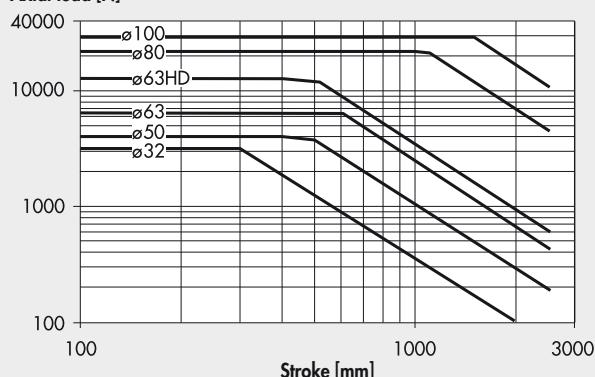

## CYLINDER WITH MOTOR AND GEAR BOX

## PEAK LOADS

With vertical installations, the following load conditions applied to the piston rod must be met.

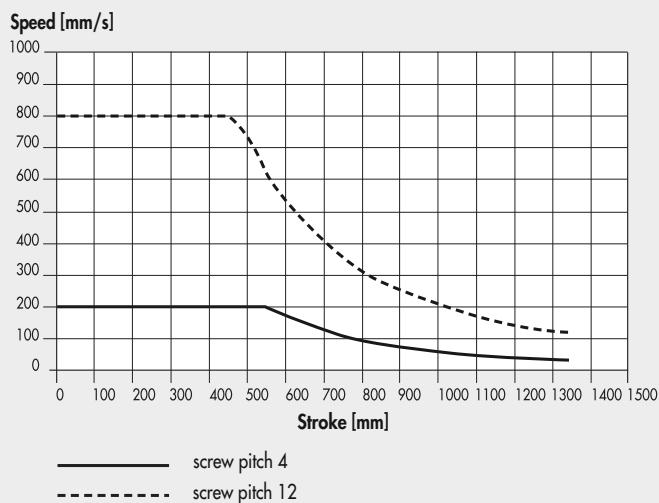

### Axial load [N]

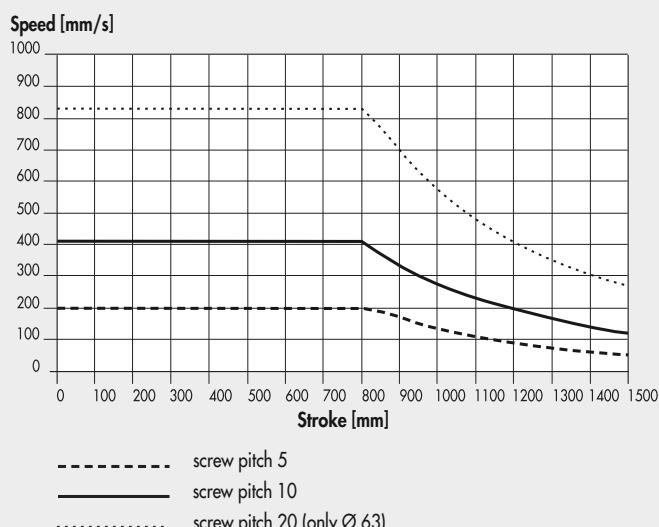

## CRITICAL VELOCITY

The two variables (stroke and linear speed) must meet the conditions in the graph below, otherwise resonance could be generated and affect the system.

### $\varnothing 32$

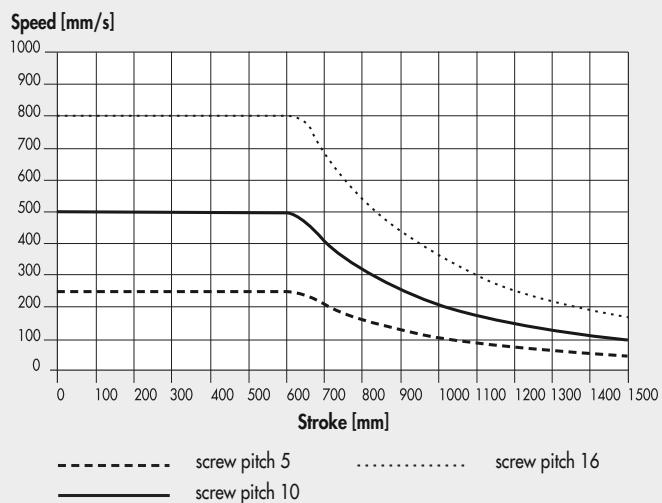

### $\varnothing 63 - \varnothing 63\text{ HD}$

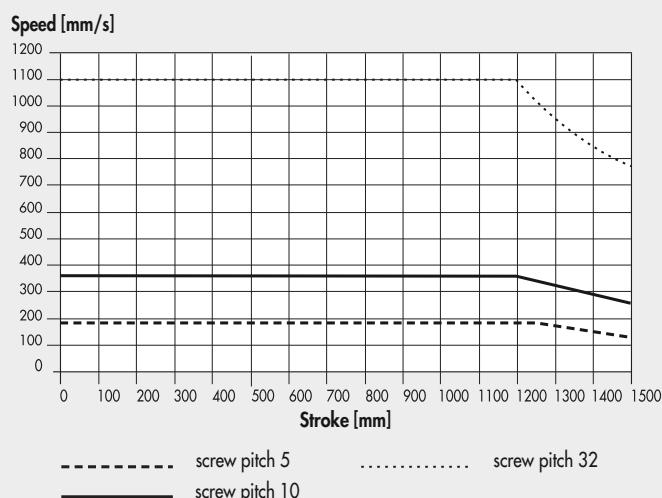

### $\varnothing 100$

### $\varnothing 50$

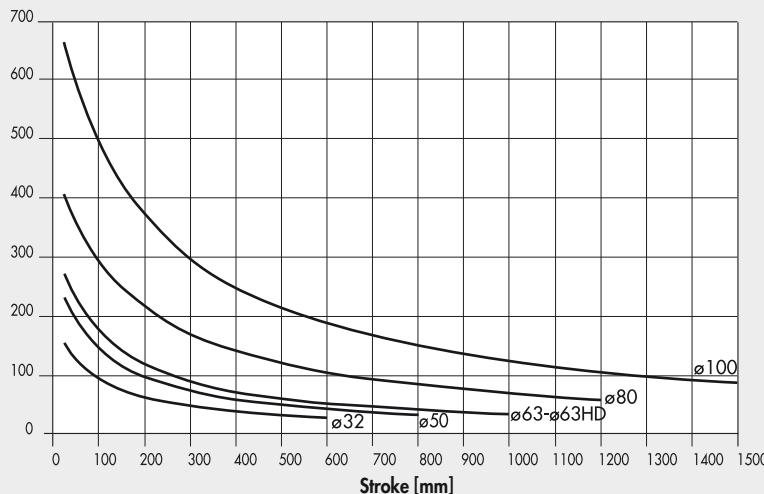

### $\varnothing 80$

## MAXIMUM RADIAL LOADS ON PISTON ROD

Radial loads [N]

Radial loads can be applied to the piston rod.

They must not exceed the values in the adjacent chart, otherwise the guides on the rod and piston will be subjected to excessive wear.

## PISTON ROD SPEED DEPENDING ON THE NUMBER OF SCREW TURNS

SCREW PITCH	TRANSMISSION RATIO	K (n/V)
4	1:1	15
5	1:1	12
10	1:1.25	15
	1:1	6
	1:1.25	7.5
	1:1.5	9
	1:2	12
12	1:1	5
16	1:1	3.75
20	1:1	3
32	1:1	1.87
40	1:1.5	2.81
	1:1	1.5
	1:2	3
	1:3	4.5

The table shows the direct correspondence between the number of turns (1/min) and the translation speed of the stem (mm/s).

In any case all the other conditions and limitations of each specific cylinder will have to be complied.

**Example:**

V = 100 mm/s  
pitch = 10  
transmission ratio = 1:1.5  
K = 9  
n = V x K = 900 rpm

## DRIVE TORQUE AS A FUNCTION OF THE AXIAL LOAD APPLIED TO THE PISTON ROD

SCREW PITCH	TRANSMISSION RATIO	h (C/F)
4	1:1	0.0008
5	1:1	0.0010
10	1:1.25	0.0008
	1:1	0.0020
	1:1.25	0.0016
	1:1.5	0.0013
	1:2	0.0010
12	1:1	0.0024
16	1:1	0.0032
20	1:1	0.0040
32	1:1	0.0064
40	1:1.5	0.0043
	1:1	0.0080
	1:2	0.0040
	1:3	0.0027

The friction generated in the mechanical system is taken into account.

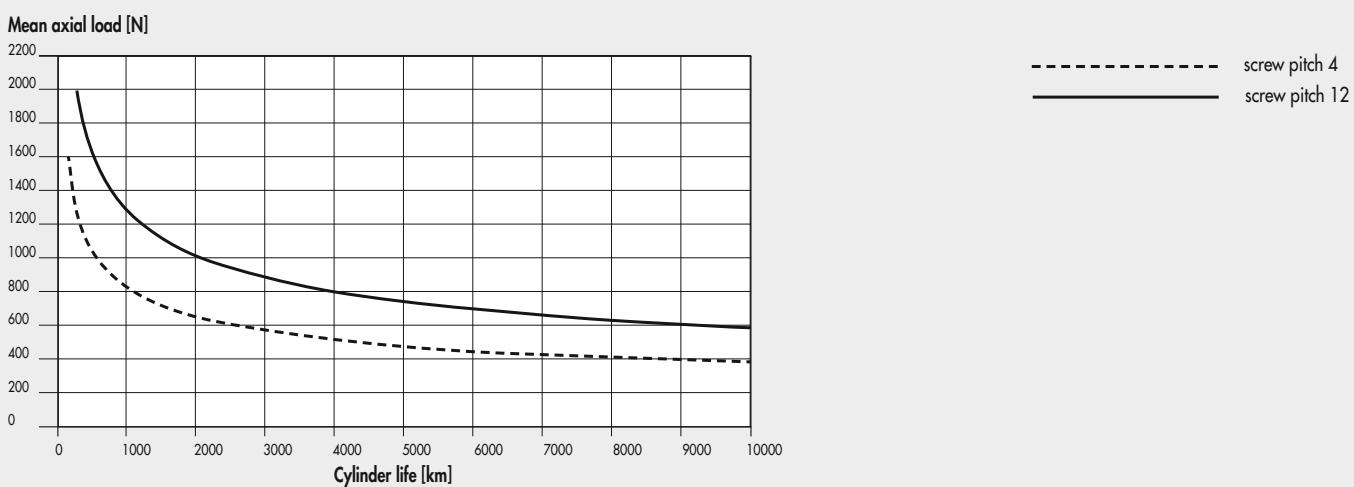

**Example:**

F = 1000 N  
pitch = 10  
transmission ratio = 1:1.5  
h = 0.0013  
C = F x h = 1.3 Nm

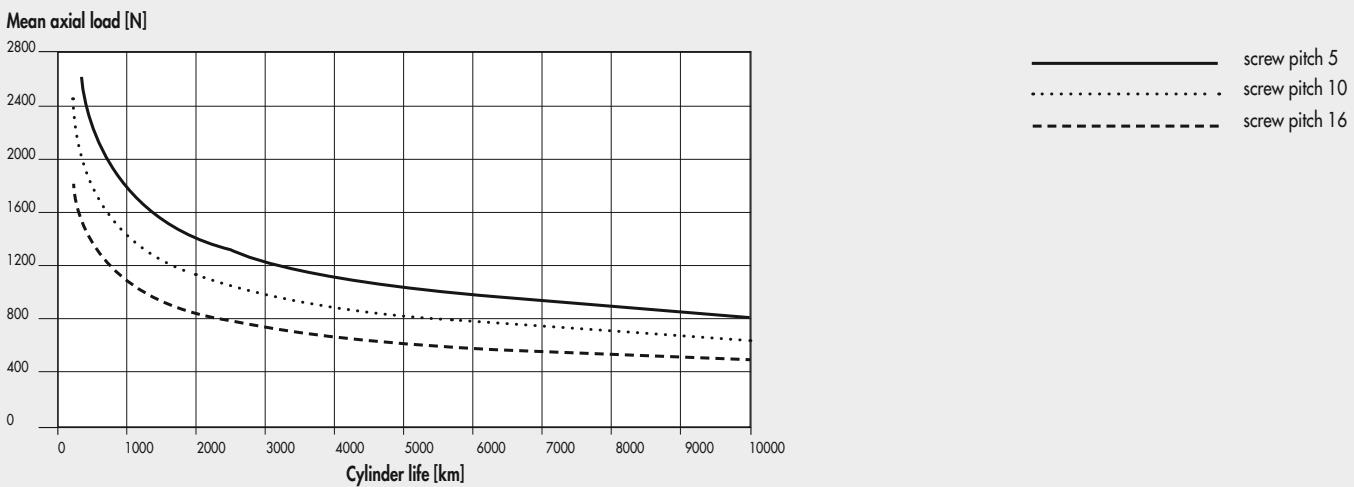

## LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD

Life characteristics can vary considerably from those indicated in the graphs due to different operating conditions (radial loads, temperature, lubrication status, etc.).

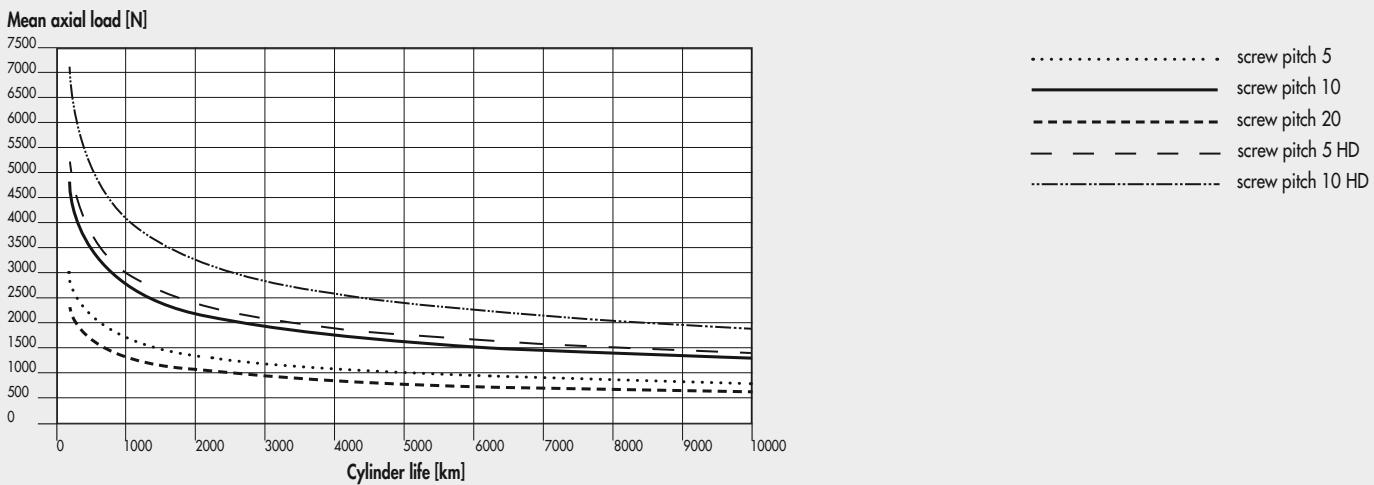

### Ø 32

### Ø 50

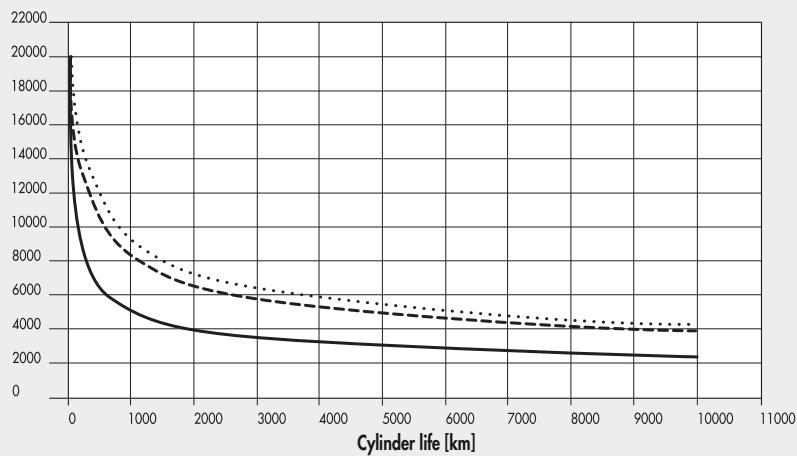

### Ø 63 - Ø 63 HD

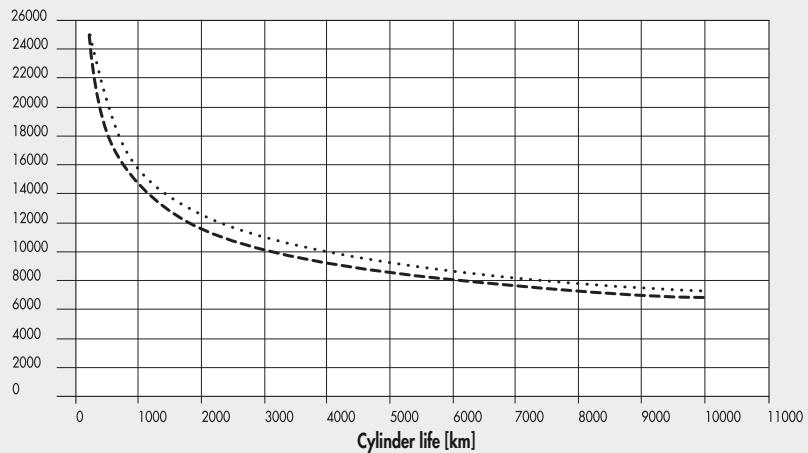

## Ø 80

Mean axial load [N]

## Ø 100

Mean axial load [N]

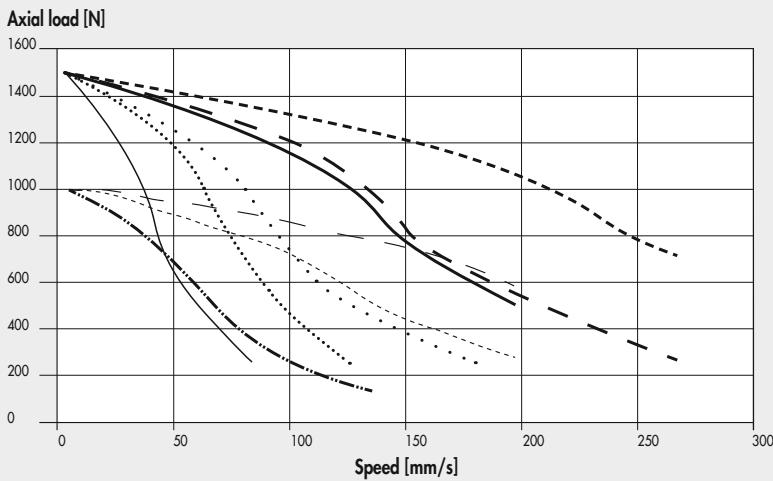

## NOTES

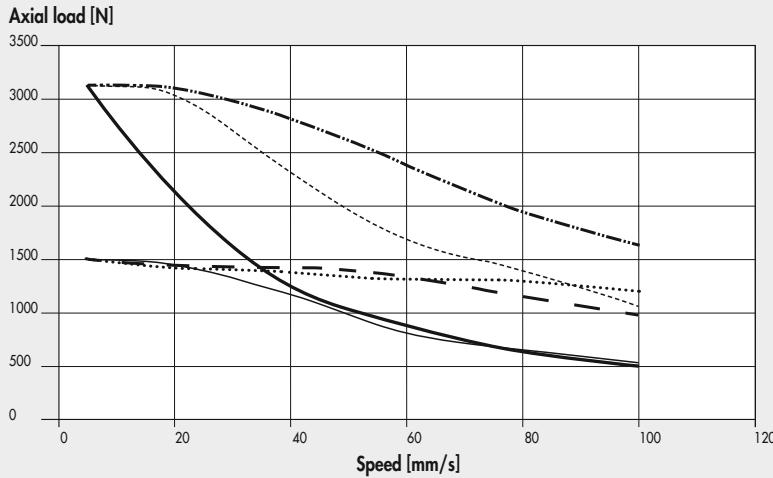

## AXIAL LOAD CURVES AS A FUNCTION OF SPEED (CYLINDER COMPETE WITH MOTOR AND DRIVE)

N.B.: The obtainable load values already take the efficiency of the system into account. For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating. Consequently, available axial load with the motor stopped is also reduced by 50%.

or 37M4770000 (with brake)  
+ 37D2600001 (3000W) in-line version (1:1)

Ø 100 with pitch 40 screw, BRUSHLESS motors and BRUSHLESS motors with BRAKE (3000W)

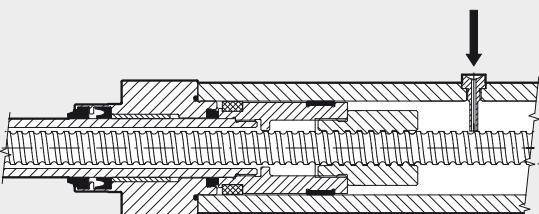

## LUBRICATION DIAGRAMS

### LUBRICATION OF VERSION WITH NON-ROTATING PISTON ROD

- Retract the piston rod towards the rear head. The piston rod/piston ball screw/system must rest against the buffer of the rear head
- Unscrew the cap on the lubricator port (see note 1 to the drawing on page 1-477)
- Screw the lubricating pin (see accessory on page 1-489) into the thread. Make sure you enter the corresponding hole in the piston below.
- Pump grease (code 9910506) in 4-5 times using a suitable lubricator
- Unscrew the lubricating pin and make the piston rod perform four complete strokes. The piston rod should end up in the initial (retracted) position
- Repeat the last two operations
- The operation of re-greasing will have to be repeated every 200 km, approximately.

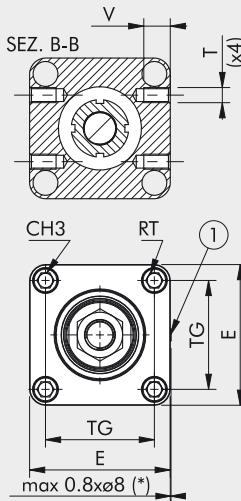

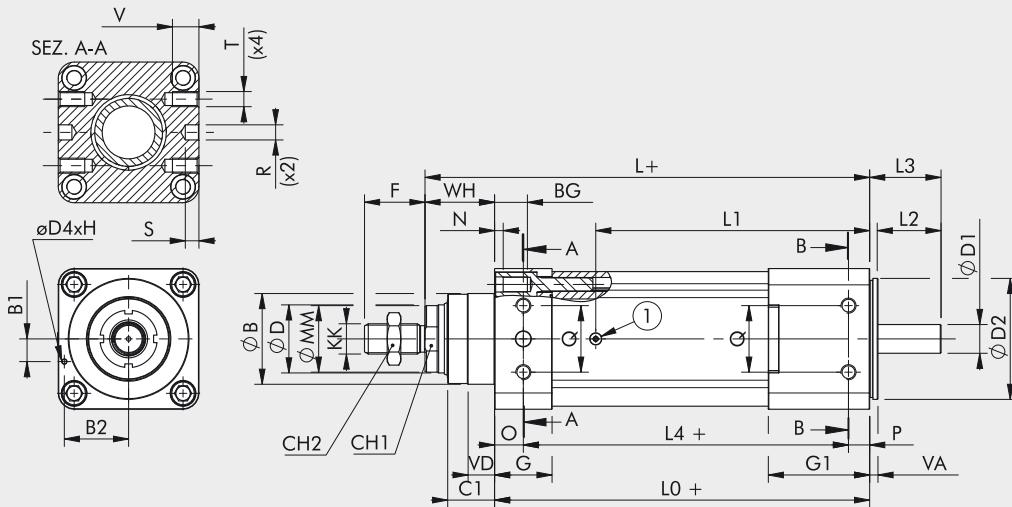

### LUBRICATION OF VERSION WITHOUT NON-ROTATING PISTON ROD

- Extend the piston rod completely. The piston rod/piston/ball screw system must rest against the buffer of the front head
- Unscrew the cap on the lubricator port (see note 1 to the drawing on page 1-477)
- Screw the lubricating pin (see accessory on page 1-489) into the thread. Make sure you enter the corresponding hole in the piston below.
- Pump grease (code 9910506) in 4-5 times using a suitable lubricator
- Unscrew the lubricating pin and make the piston rod perform four complete strokes. The piston rod should end up in the initial (extended) position
- Repeat the last two operations
- The operation of re-greasing will have to be repeated every 200 km, approximately.

C<sub>out</sub> = rated output torqueN<sub>in</sub> = nominal input speed

J = mass moment of inertia of the gearbox

# ELECTRIC CYLINDER SERIES ELEKTRO ROUND DC

In the ELEKTRO ROUND DC cylinder, the forward movement of the piston rod is obtained via an acme screw and a self-lubricating technopolymer nut. This piston has a guide ring that is calibrated to minimize the backlash with the cylinder liner and reduce vibration during rotation of the screw. The piston also comes with a magnet for magnetic sensors.

The system is driven by a direct current motor available in two versions, 12 and 24VDC. The position of the motor can be controlled using an optional encoder. A resettable optional fuse can be inserted in the cylinder for motor thermal overload protection. The motor used has a planetary gearbox with a 1/13 or 1/25 ratio.

Depending on the configuration (screw pitch and gear ratio), this cylinder can be either irreversible (supporting the load with the motor off) or reversible under load.

Both versions are supplied without piston rod anti-rotation device, which will be provided by the customer outside the cylinder.

It is available in two versions:

- with an in-line motor, where the motor shaft is connected directly to the screw via a coupling.
- with a geared motor, where the transmission of motion is ensured by three cogwheels with a ratio of 1:1.

This cylinder is designed for use with IP65 protection rating.

The solutions with the acme screw are generally suitable for applications where the number of operations per time unit is reduced; the degree of accuracy is not particularly high due to heating of the screw-leadscrew assembly; wear over time does not create inconveniences, no high forces and speeds are required at the same time.

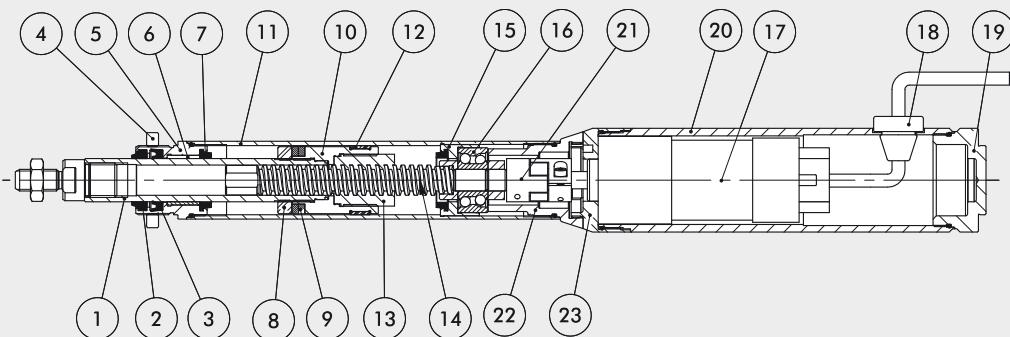

## TECHNICAL DATA

		Ø 32 pitch 4	Ø 32 pitch 20
Temperature range	°C		from -20 to +60
Degree of protection			IP65
Gearing ratio of the planetary gear unit	mm	25	1/13 or 1/25
Minimum stroke	mm		50
Maximum stroke	mm		1000
Piston rod diameter	mm		20
Maximum thrust	N		see graphs on page 1-497
Maximum speed	mm/s		see graphs on page 1-497
Maximum load in vertical position and motor powered off (reversibility)	N	irreversible (max recommended 1000)	90 with 1/25 gear ratio 40 with 1/13 gear ratio
Work cycle at 25°C (duty cycle)	%		20 (example: 2 min. ON 8 min. OFF)
Overall radial oscillation of the piston rod (without load) for 100 mm of stroke	mm		0.4
Versions			In-line or geared
Uncontrolled impact at the end of stroke			NOT ALLOWED (it provides an extra-stroke minimum 5 mm)
Sensor magnet			YES
Work position			Any
Motor			Direct current DC
Supply voltage	VDC		12 or 24
Input power with MAX torque	W		24
Input current with MAX torque	A		2 (12VDC) 1 (24VDC)
Interference suppression			VDR and capacitors according to polarity
Direction of rotation			two channels, three pulses per rev for each channel
Encoder (optional)			Overload and short-circuiting protection using resettable fuse (optional)
Motor protection			
Power cable (length)	m		2
Weight at stroke 0, in-line version	g	1247	1224
Weight at stroke 0, geared version	g	1461	1437
Additional weight for each mm stroke	g		1.4

### NOTES

# ELECTRIC AXIS ELEKTRO SHAK SERIES

**DEXYÍ**  
®

ACTUATORS

ELECTRIC AXIS ELEKTRO SHAK SERIES

Belt-driven rodless electric cylinder with V-Lock type interface. The cylinder structure features a sturdy anodised aluminium extruded profile to ensure optimal rigidity. The typical V-Lock dovetail (no grooves) is provided for easy installation using QS elements. The V-Lock interface with a dovetail and standard grooves is mounted on the moving plate to fix the other components using K or QS elements. The slide is moved by means of adjustable casters running along hardened and tempered guides inserted into the extruded profile, to obtain a rigid system with adjustable clearance. Guide lubrication nipples are also mounted on the slide plate. The slide is driven by a reinforced belt that is in turn operated by a pulley keyed onto the motor; a mechanical belt-tensioning system is mounted on the cylinder.

Different drives are available, both brushless and stepping. The versions with a brushless motor can be equipped with a 1:3 speed gear unit, when you want to make the most of the available torque.

In addition to the standard drives included in the catalogue, custom cylinder can also mount other types of motor. The homing position is identified by a inductive sensor included in the supply.

Two different size are available, SHAK 340 and SHAK 470, with pre-set standard strokes. For each size it is possible to choose side on which to mount the motor (4 positions). A version with a smooth tree-type output, mounted in a pre-set position, is also available. The SHAK cylinder can be mounted both horizontally and vertically. With vertical installation, it is advisable to use motors with a holding brake that only activates in the event of a power failure but not when there is a motor overload. For the correct operation of the brake, it is necessary to meet the limits required by the axial load curves according to the speed. Among the accessories available there is a cable guiding system with a handy cable channel and bracket.

## COMPONENTS

- ① INTERFACE PLATE: anodized aluminium
- ② SLIDE: aluminium
- ③ BODY: anodized aluminium
- ④ TOOTHED TRANSMISSION BELT: loaded polychloroprene (CR)
- ⑤ HARDENED GUIDE: hardened ground chromed steel
- ⑥ DRIVE PULLEY: steel
- ⑦ IDLE PULLEY: aluminium
- ⑧ INDUCTIVE SENSOR
- ⑨ GUARD: aluminium - technopolymer
- ⑩ COVER PROFILE: anodized aluminium
- ⑪ ECCENTRIC ROLLER
- ⑫ CONCENTRIC ROLLER
- ⑬ DRIVING PULLEY: aluminium
- ⑭ BUFFER: rubber

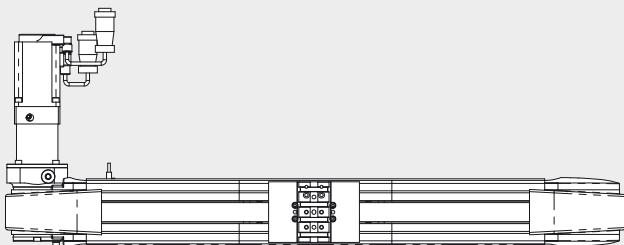

**VERSIONS**

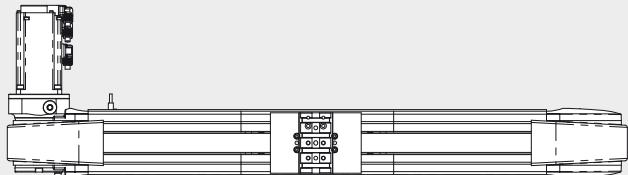

**VERSION WITHOUT MOTOR** (attachment on the top left side only)

**VERSION WITH MOTOR AND GEAR UNIT**

**VERSION WITH MOTOR WITHOUT GEAR UNIT**

The versions supplied with **MOTOR** or with **MOTOR AND GEAR UNIT** are available in the following configurations:

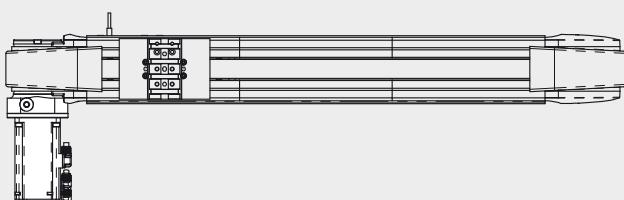

**VERSION WITH MOTOR OR  
MOTOR AND GEAR UNIT TOP LEFT**

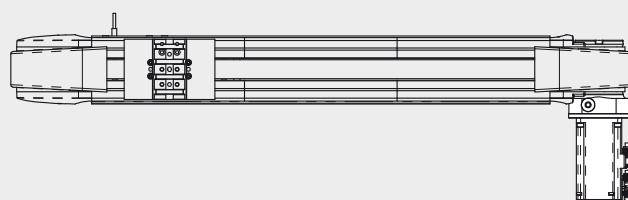

**VERSION WITH MOTOR OR  
MOTOR AND GEAR UNIT TOP RIGHT**

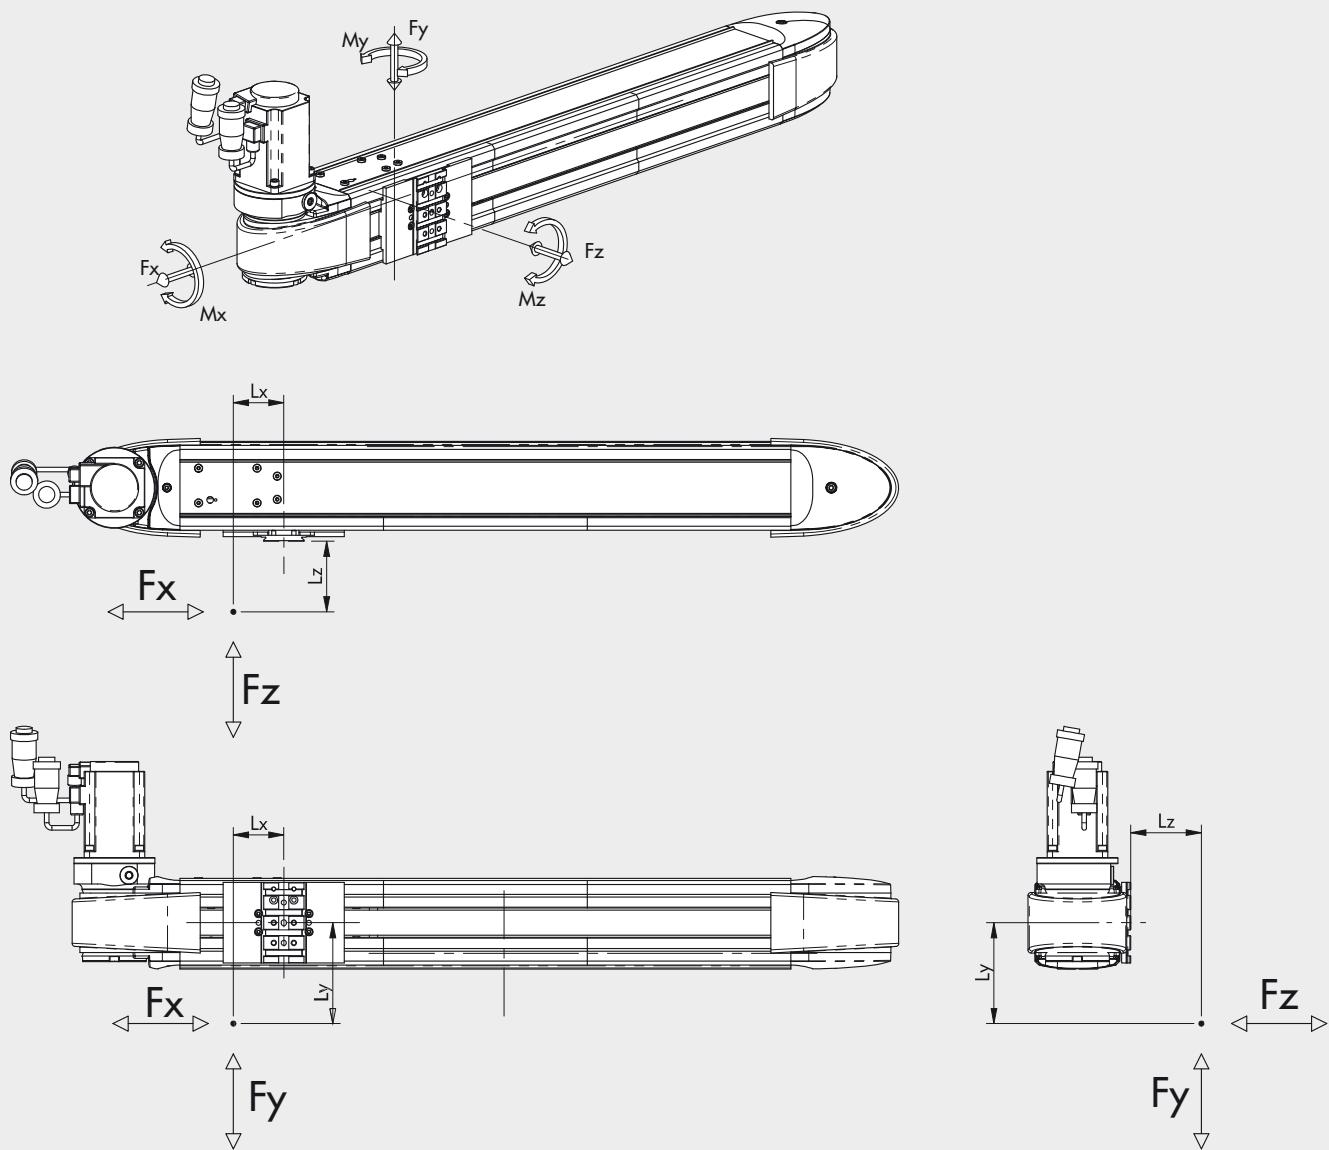

**VERSION WITH MOTOR OR  
MOTOR AND GEAR UNIT BOTTOM LEFT**

**VERSION WITH MOTOR OR  
MOTOR AND GEAR UNIT BOTTOM RIGHT**

## DIAGRAM OF FORCES AND MOMENTS

Size	$F_y$ max [N]	$F_z$ max [N]	$M_x$ max [Nm]	$M_y$ max [Nm]	$M_z$ max [Nm]
SHAK 340	800	600	24	42	52
SHAK 470	1000	800	32	50	70

N.B.: The values are calculated on the basis of theoretical useful life of 10000 km.

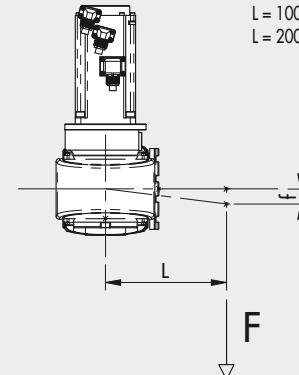

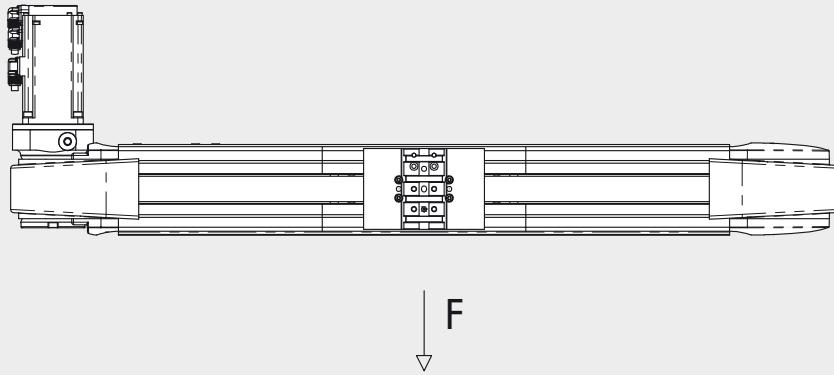

N.B.: For the maximum value of  $F_x$  see the general technical data and the axial load curves depending on the speed.

N.B.: When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where  $L_x$ ,  $Ly$  and  $Lz$  have to be given in metre.

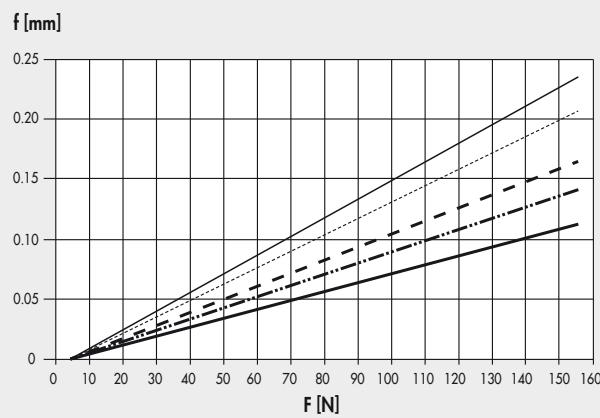

$$M_x = F_z \cdot Ly + F_y \cdot Lz \quad M_y = F_z \cdot Lx + F_x \cdot Lz \quad M_z = F_y \cdot Lx + F_x \cdot Ly$$

$$\frac{(M_x)}{M_x \text{ max}} + \frac{(M_y)}{M_y \text{ max}} + \frac{(M_z)}{M_z \text{ max}} + \frac{(F_y)}{F_y \text{ max}} + \frac{(F_z)}{F_z \text{ max}} \leq 1$$

## DEFORMATION ACCORDING TO LOAD

## AXIAL LOAD-SPEED CURVES

**N.B.:** Check that the following constraints are met for each cycle phase:

- the maximum movable masses and related acceleration values specified in the data sheets;
- the values specified in the force and moment calculation diagram (including moment of inertia).

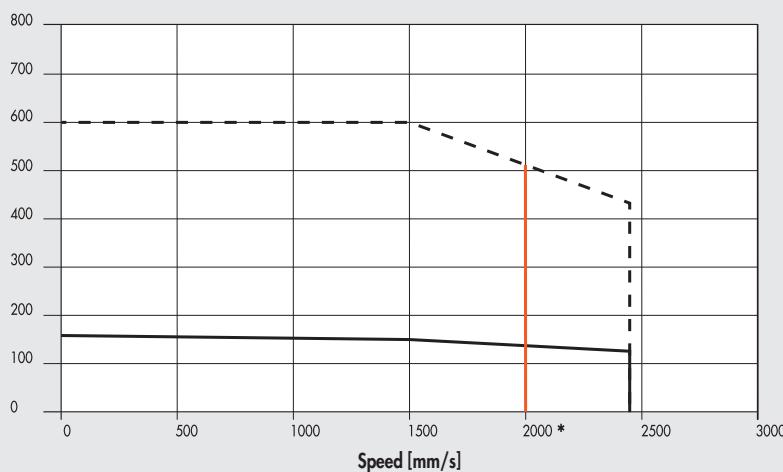

The following diagrams show the axial load with changing speed (mm/s). Each diagram shows two separate curves:

- **NOMINAL AXIAL LOAD** curve: the nominal axial load delivered by the motor with a duty cycle of 100%
- **MAXIMUM AXIAL LOAD** curve: the axial load delivered by the motor with a duty cycle of less than 100%.

### SHAK 340

BRUSHLESS and BRUSHLESS with BRAKE drives (versions with 1:3 gear unit)

Axial load [N]

Force load with maximum torque load  
37M2220000 or 37M4220000 (with brake)  
+ 37D2400000 (400W)

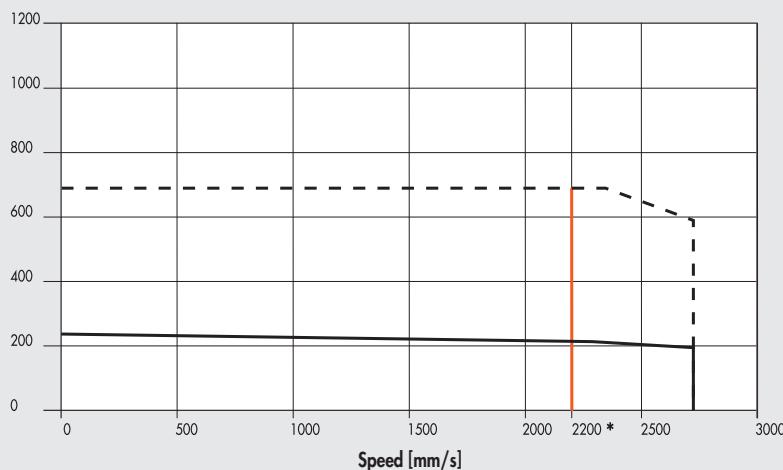

Force load with nominal torque load  
37M2220000 or 37M4220000 (with brake)  
+ 37D2400000 (400W)

\* = limit of gear unit continuous operation: higher speeds can be reached only for "duty cycle"  $\leq$  60% and for a maximum number of 1000 accelerations per hour.

### SHAK 470

BRUSHLESS and BRUSHLESS with BRAKE drives (versions with 1:3 gear unit)

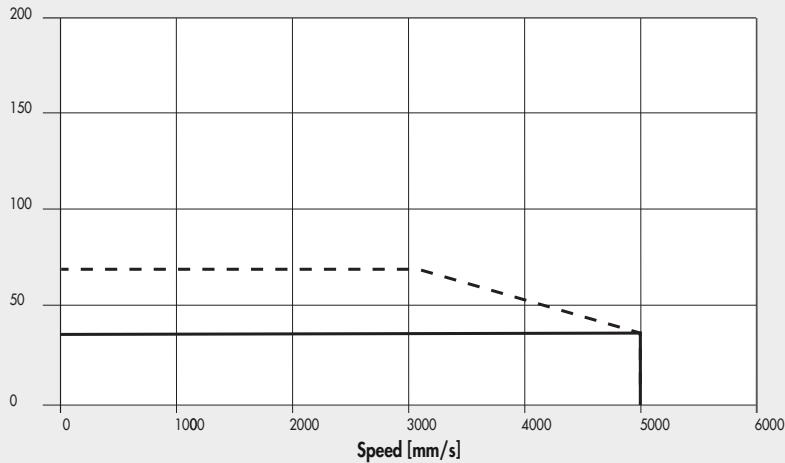

Axial load [N]

Force load with maximum torque load  
37M2330000 or 37M4330000 (with brake)  
+ 37D2400000 (750W)

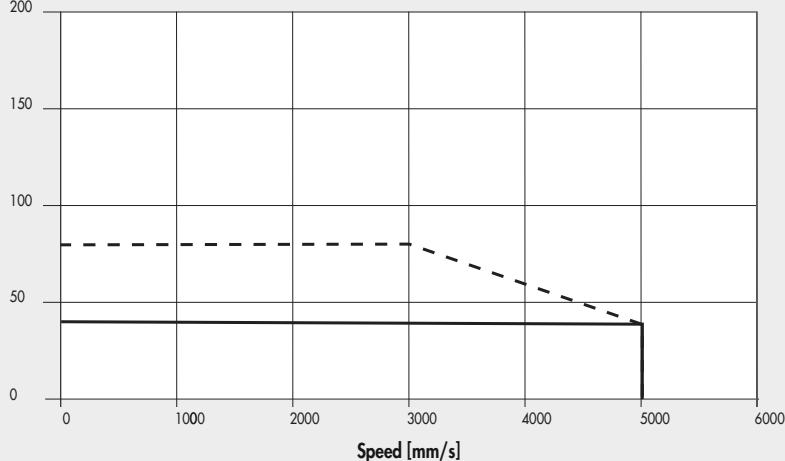

Force load with nominal torque load  
37M2330000 or 37M4330000 (with brake)  
+ 37D2400000 (750W)

\* = limit of gear unit continuous operation: higher speeds can be reached only for "duty cycle"  $\leq$  60% and for a maximum number of 1000 accelerations per hour.

**SHAK 340  
BRUSHLESS and BRUSHLESS with BRAKE drives**
**Axial load [N]**

Force load with maximum torque load  
37M2220000 or 37M4220000 (with brake)  
+ 37D2400000 (400W)

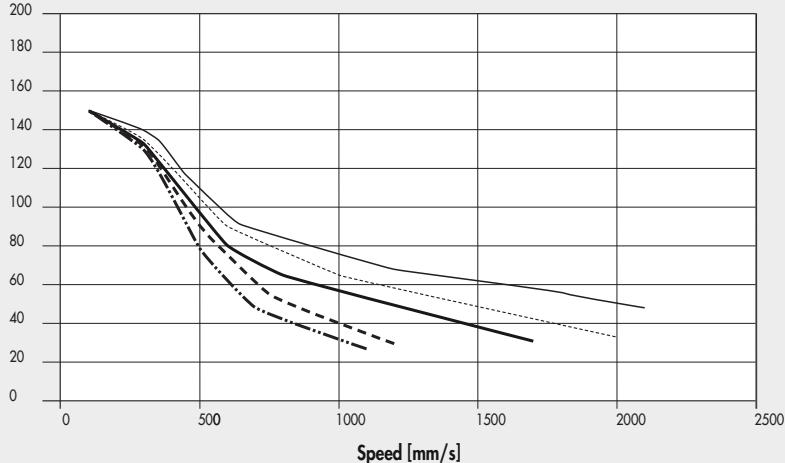

Force load with nominal torque load  
37M2220000 or 37M4220000 (with brake)  
+ 37D2400000 (400W)

**SHAK 470  
BRUSHLESS and BRUSHLESS with BRAKE drives**
**Axial load [N]**

Force load with maximum torque load  
37M2330000 or 37M4330000 (with brake)  
+ 37D2400000 (750W)

Force load with nominal torque load  
37M2330000 or 37M4330000 (with brake)  
+ 37D2400000 (750W)

N.B.: The obtainable load values already take the efficiency of the system into account. For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating. Consequently, available axial load with the motor stopped is also reduced by 50%.

# ELECTRIC AXIS SERIES ELEKTRO SHAK GANTRY

**DEXYÍ**  
®

ACTUATORS

ELECTRIC AXIS SERIES ELEKTRO SHAK GANTRY

The gantry consists of two parallel belt-driven axes, of which one acts as drive axis (drive X-axis) and the other as driven axis (geared X-axis). Both axes are connected one to the other by means of an anodized aluminium shaft and two flexible couplings that compensate for any minor misalignments between the axes caused by the support base. The shape of both coupling and drive shaft is designed to facilitate disassembly.

The carriages of the drive axis and the driven axis (both with a V-Lock interface featuring a typical shape and grooves) move synchronously thanks to the drive shaft. On the extruded body of both axes, on the side opposite to the carriages, the typical (no grooves) V-Lock dovetail is provided for easy fixing to the support to the support structure using QS elements. On the carriages of the X-axes another SHAK electric axis (Y-axis) is mounted transversally.

The motion is the same as for the single axis and has the same advantages: rigid structure, movement of the carriage with adjustable clearance, the presence of guide lubrication nozzles, the possibility of adjusting belt tensioning.

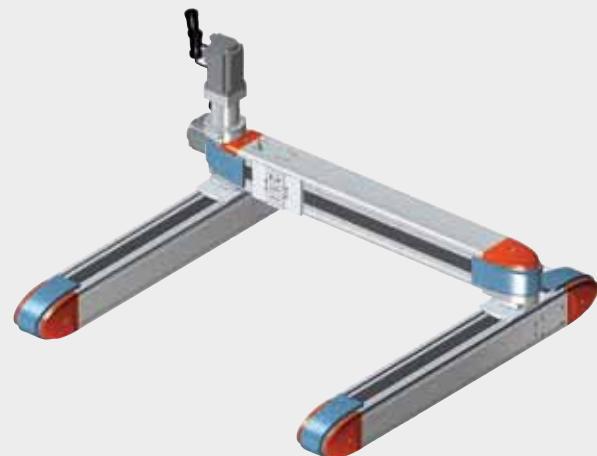

A BRUSHLESS motor with a 1:5 speed gear unit has been adopted as it ensures optimal load capacity without sacrificing the dynamic and speed performance typical of this product.

In addition to the standard drives proposed in the catalogue, the cylinder can be customised with the installation of other motors.

The homing position is identified by an inductive proximity sensor included in the supply.

Two sizes are available, SHAK-GANTRY 340 and SHAK-GANTRY 470, with standard pre-set strokes. For each size, it is also possible to choose on which side to mount the motors (right- or left-hand).

The Elektro SHAK-GANTRY was designed and optimized for horizontal installation. On request, the motors can be supplied with a holding brake, which activates only in the event of a power failure but not when there is a motor overload. For correct operation of the brake, it is important to comply with the limits required by the axial load curves according to speed. Among the accessories available there is a cable-guiding system with a handy cable channel and bracket (in the version with motors on the left-hand side).

## TECHNICAL DATA

		SHAK GANTRY 340	SHAK GANTRY 470

$$J_{\text{tot}} = [2 \cdot J_x + J_T + M \cdot (\frac{d_p}{2})^2] \cdot \tau^2 + J_R + J_M$$

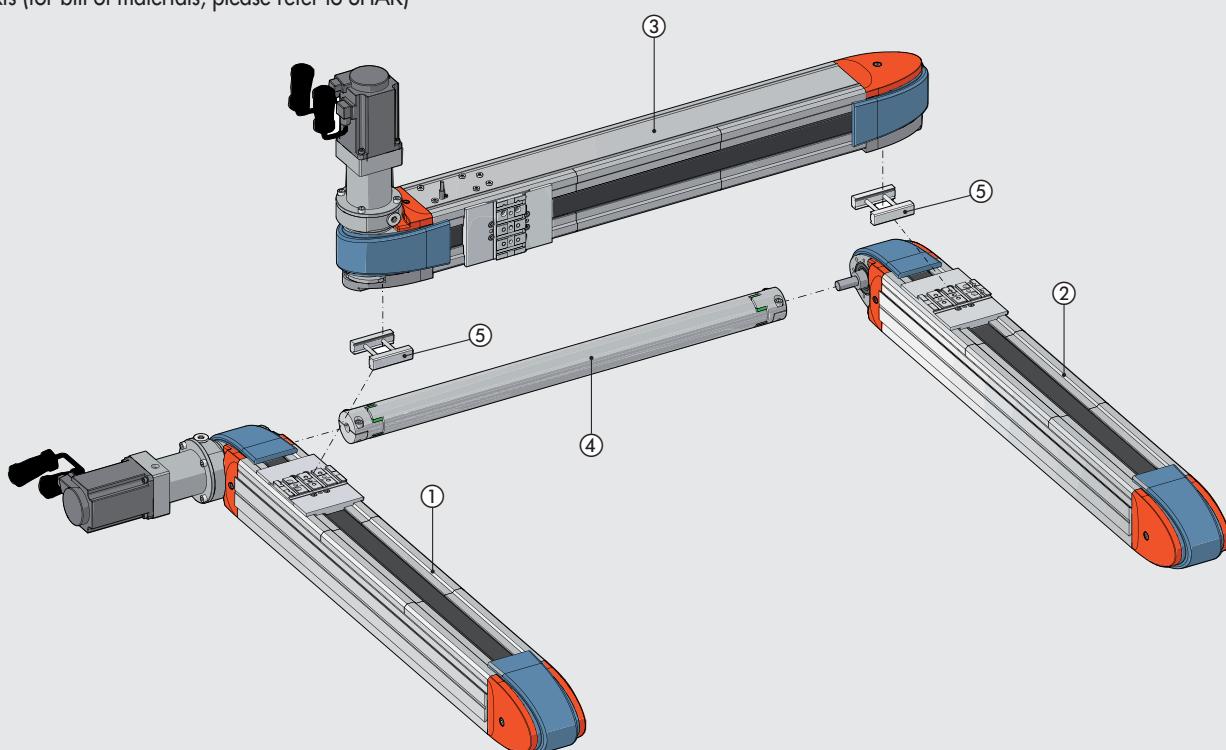

N.B.: M = weight axis Y + mass applied on Y axis

CONNECTION JOINT		SHAK GANTRY 340 Y-AXIS			SHAK GANTRY 470 Y-AXIS		
Max. number of revs	rpm	2000 (all strokes)			2000 (stroke 600/1000/1400) 1400 (stroke 1800) 1000 (stroke 2200)		
Maximum transmissible torque	Nm	25 (hole Ø12)			32 (hole Ø15)		

## COMPONENTS

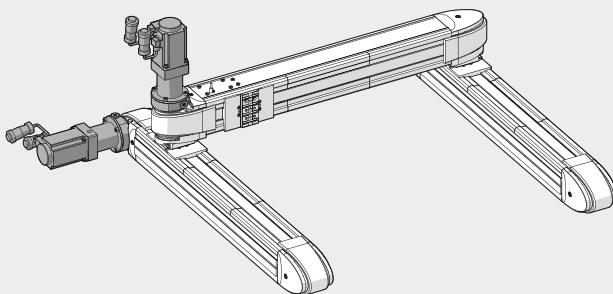

- ① Drive X-axis (for bill of materials, please refer to SHAK)
- ② Driven X-axis (for bill of materials, please refer to SHAK)
- ③ Y-axis (for bill of materials, please refer to SHAK)

- ④ Connection joint (aluminium and polyurethane)
- ⑤ QS fixing elements

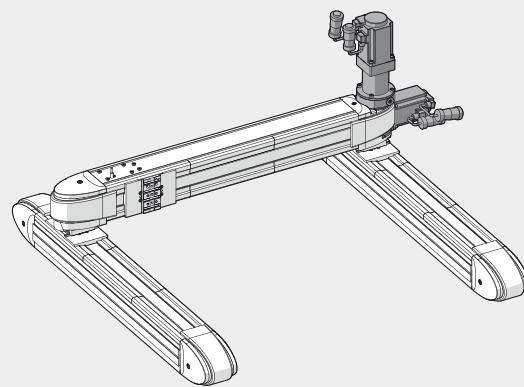

## VERSIONS

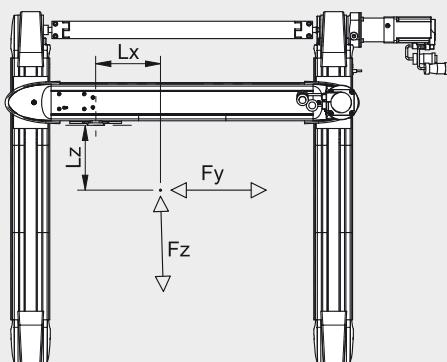

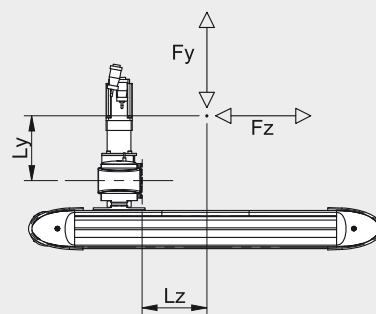

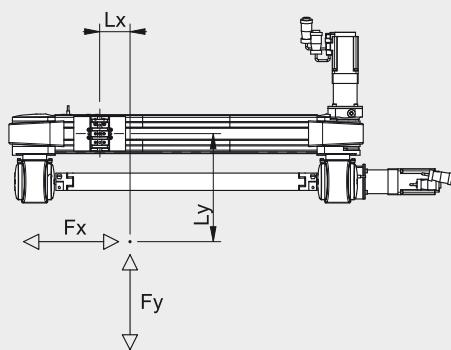

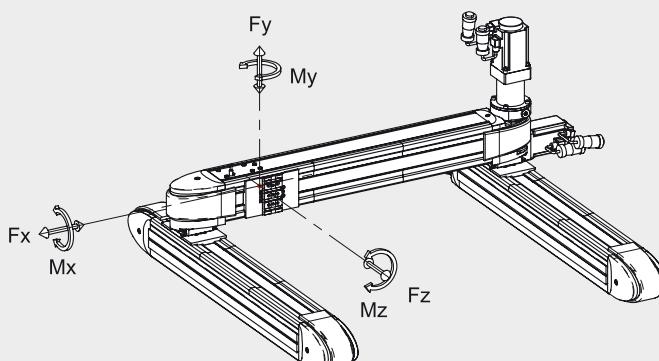

VERSION WITH MOTORS ON THE LEFT-HAND SIDE

VERSION WITH MOTORS ON THE RIGHT-HAND SIDE

## DIAGRAM OF FORCES AND MOMENTS

Size	Fy max [N]	Fz max [N]	Mx max [Nm]	My max [Nm]	Mz max [Nm]
SHAK GANTRY 340	800	600	24	42	52
SHAK GANTRY 470	1000	800	32	50	70

N.B.: The values are calculated on the basis of theoretical useful life of 10000 km.

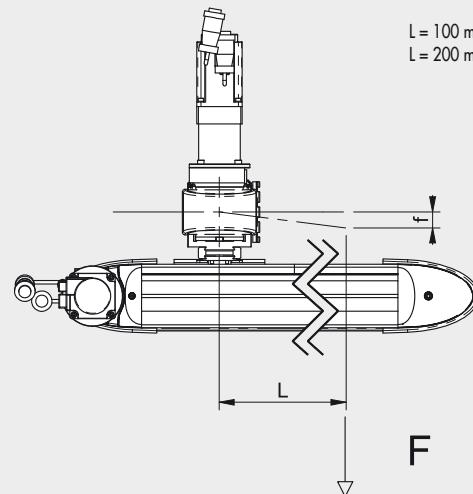

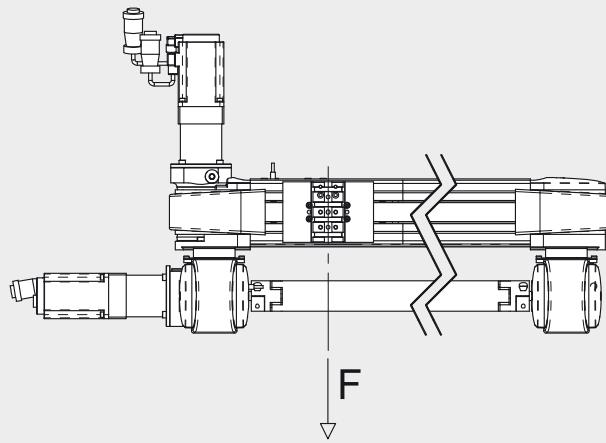

N.B.: For the maximum value of Fx see the general technical data and the axial load curves depending on the speed for SHAK single axes. For the maximum value of Fz, please also refer to general technical data and axial load curves, depending on the speed for SHAK portal axes.

N.B.: When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where Lx, Ly and Lz have to be given in metre.

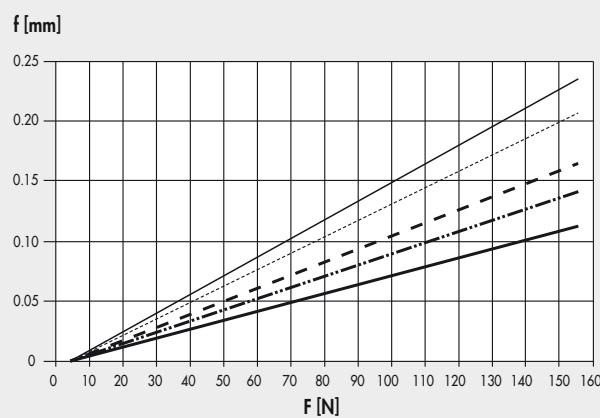

$$Mx = Fz \cdot Ly + Fy \cdot Lz \quad My = Fz \cdot Lx + Fx \cdot Lz \quad Mz = Fy \cdot Lx + Fx \cdot Ly$$

$$\frac{(Mx)}{Mx \max} + \frac{(My)}{My \max} + \frac{(Mz)}{Mz \max} + \frac{(Fy)}{Fy \max} + \frac{(Fz)}{Fz \max} \leq 1 \quad \text{e} \quad \frac{(Fx)}{2Fy \max} \leq 1$$

	2800 - 1800		1.00
	2800 - 2200		1.20

**N.B.:** Maximum moving mass 25 kg

Traverse times relate to operation with motors supplied by Metal Work, using max. 200% of the rated torque.

**EXAMPLE:**

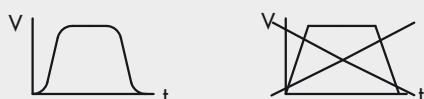

Average traverse times with SHAK GANTRY 340, 800-1200.

The following can be obtained from the tables: tX = 0.7 and tY = 0.80

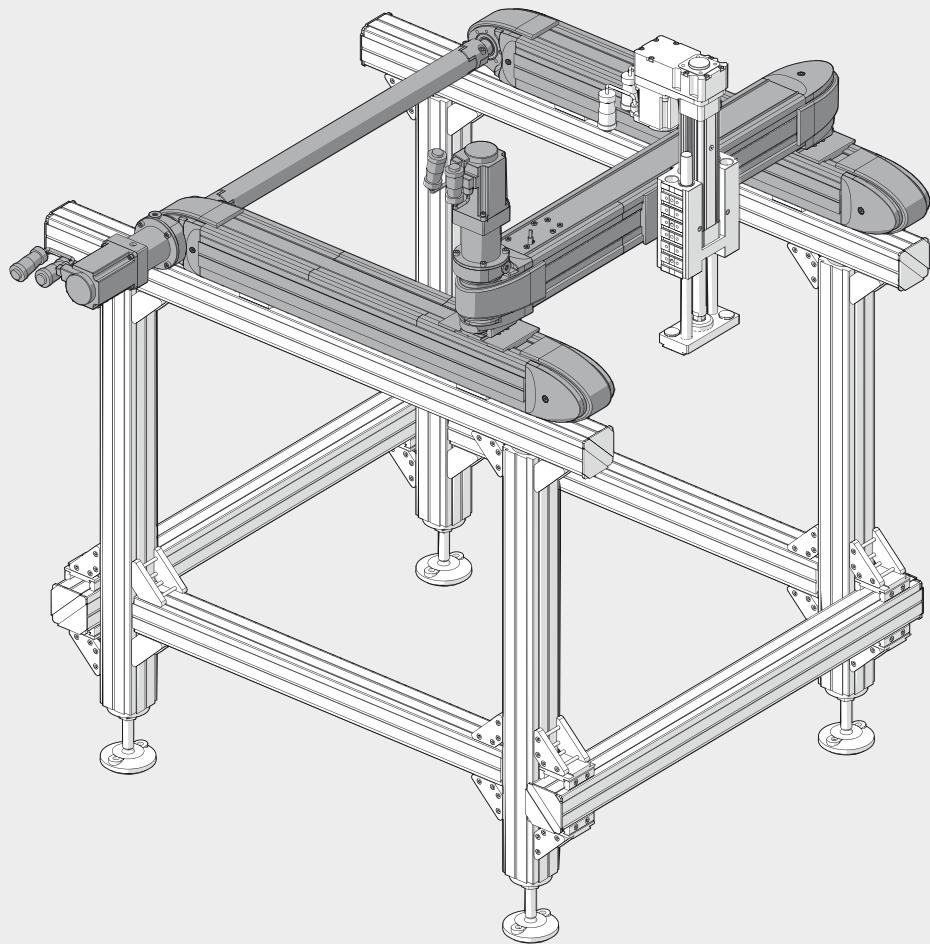

**MOTOR-DRIVE COUPLINGS**

MOTOR CODES		DRIVES CODES	
Metal Work	Manufacturer	Metal Work	37D2400000
		Manufacturer	SANYO DENKI RS1A03
37M2220000	Motor SANYO DENKI R2AA06040FXH11M (400W)		(30A 400±750 W)
37M2330000	Motor SANYO DENKI R2AA08075FXH11M (750W)		SHAK GANTRY 340 SHAK GANTRY 470

The motor must be controlled in such a way as to avoid sudden changes in speed.

$C_{out}$  = rated output torque

$N_{in}$  = nominal input speed

$J$  = mass moment of inertia of the gearhead

### SHAK INDUCTIVE SENSOR

Code 095340A0000 Description SHAK inductive sensor accessory kit

### ELECTRIC MOTORS

For SHAK GANTRY 340, please refer to motor code 37M2220000 page 1-556  
For SHAK GANTRY 470, please refer to motor code 37M2330000 page 1-556

# ELECTRIC AXIS - RODLESS ELEKTRO SK SERIES

**DEXYÍ**  
®

Electric axis without screw piston rod, with V-Lock interface.

The cylinder frame is made of anodized extruded solid aluminium, which gives the cylinder optimal torsional and flexural rigidity. The typical V-Lock dovetail is provided on three sides of the channel for easy fixing with QS elements.

The carriage features an interchangeable fixing interface plate, which is available with V-Lock axial or V-Lock orthogonal ports or in the blank type for custom solutions.

The carriage is driven by two sturdy pre-loaded ball recirculation bearings that ensure great accuracy of movement.

Threaded holes for the lubrication of the guides and ball recirculation screws are provided on both sides of the carriage.

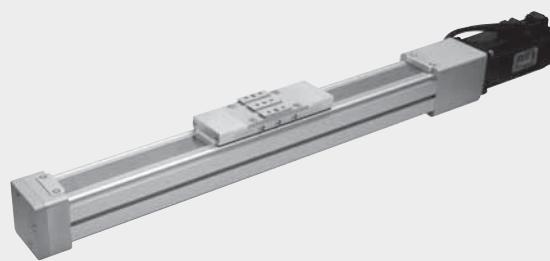

The carriage is driven by a system consisting of a hardened and tempered screw and a ball recirculation lead nut. The screw is pre-stressed with an elastic load device by means of cup springs in order to reduce vibration and hence noise level and the useful life of the system.

A series of slots for the fixing of magnetic sensors are provided on the two sides of the liner.

Various BRUSHLESS and STEPPER motor drives are available with optional motor brake and/or built-in encoder.

The cylinder can also be supplied without motor drive or, on request, with modules for interfacing with motors from the trade.

The motors can be installed in line with the liner or geared using toothed belt transmission gears.

## TECHNICAL DATA

Admissible ambient temperature for STEPPER motor	°C	from -10 to +50
Admissible ambient temperature for BRUSHLESS motor	°C	from 0 to +40
Maximum relative humidity (IP40)		90% at 40°C; 57% at 50°C (no condensate)
Maximum duty cycle for STEPPER motor		50%
Maximum duty cycle for BRUSHLESS motor		100%
Minimum stroke	mm	100
Maximum stroke	mm	1200
Positioning repeatability	mm	± 0.02
Positioning accuracy	mm	± 0.2 **
Uncontrolled impact at the end of stroke		NOT ALLOWED (it provides an extra-stroke minimum 5 mm)
Sensor magnet		YES
Work position		Any
Interface for fixing on carriage		Axial V-Lock / Orthogonal V-Lock / Blank
Noise level	dBA	<66

\*\* indicative average data that gets influenced by various factors such as the stroke, the type of motor, the cylinder version, etc ...

## MECHANICAL FEATURES

Worm screw pitch	mm	4	10
Worm screw diameter	mm	12	
Maximum static axial load* ( $F_0$ )	N	2800	
Dynamic axial load	N	5200	3600
Maximum number of revs	1/min	3000	4000
Maximum speed ( $V_{max}$ )	mm/s	200	670
Maximum acceleration without load	m/s <sup>2</sup>	5	
Maximum drive torque applicable to the worm screw shank	Nm	5	

\* Maximum admissible static load without causing damage.

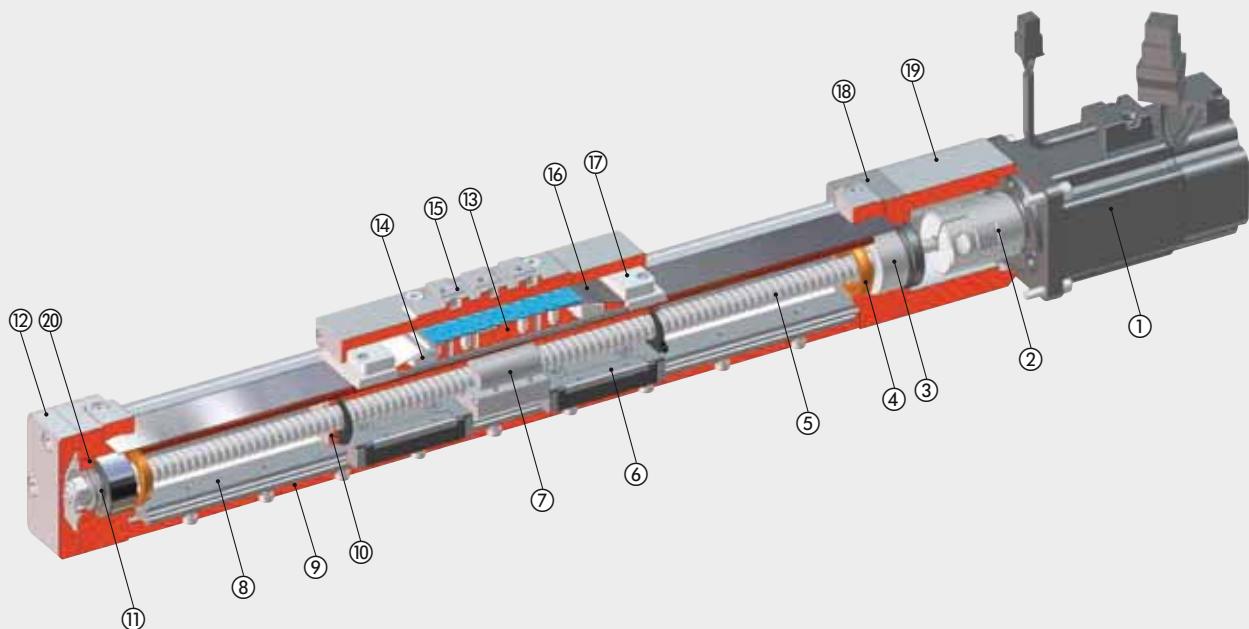

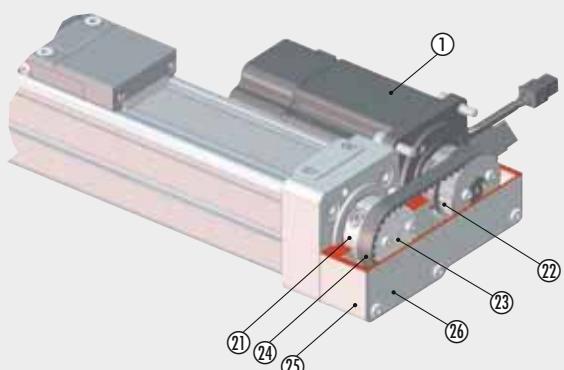

**N.B.:** For the verification of the linear guide system, please refer to page 1-526. For the verification of the screw, please refer to page 1-527.

## WEIGHTS

Worm screw pitch (p)	mm	4	10
Weight at stroke 0 (excluding the carriage fixing interface)	g	2990	3000
Additional weight each mm of stroke	g	7	
Moving mass	g	1050	

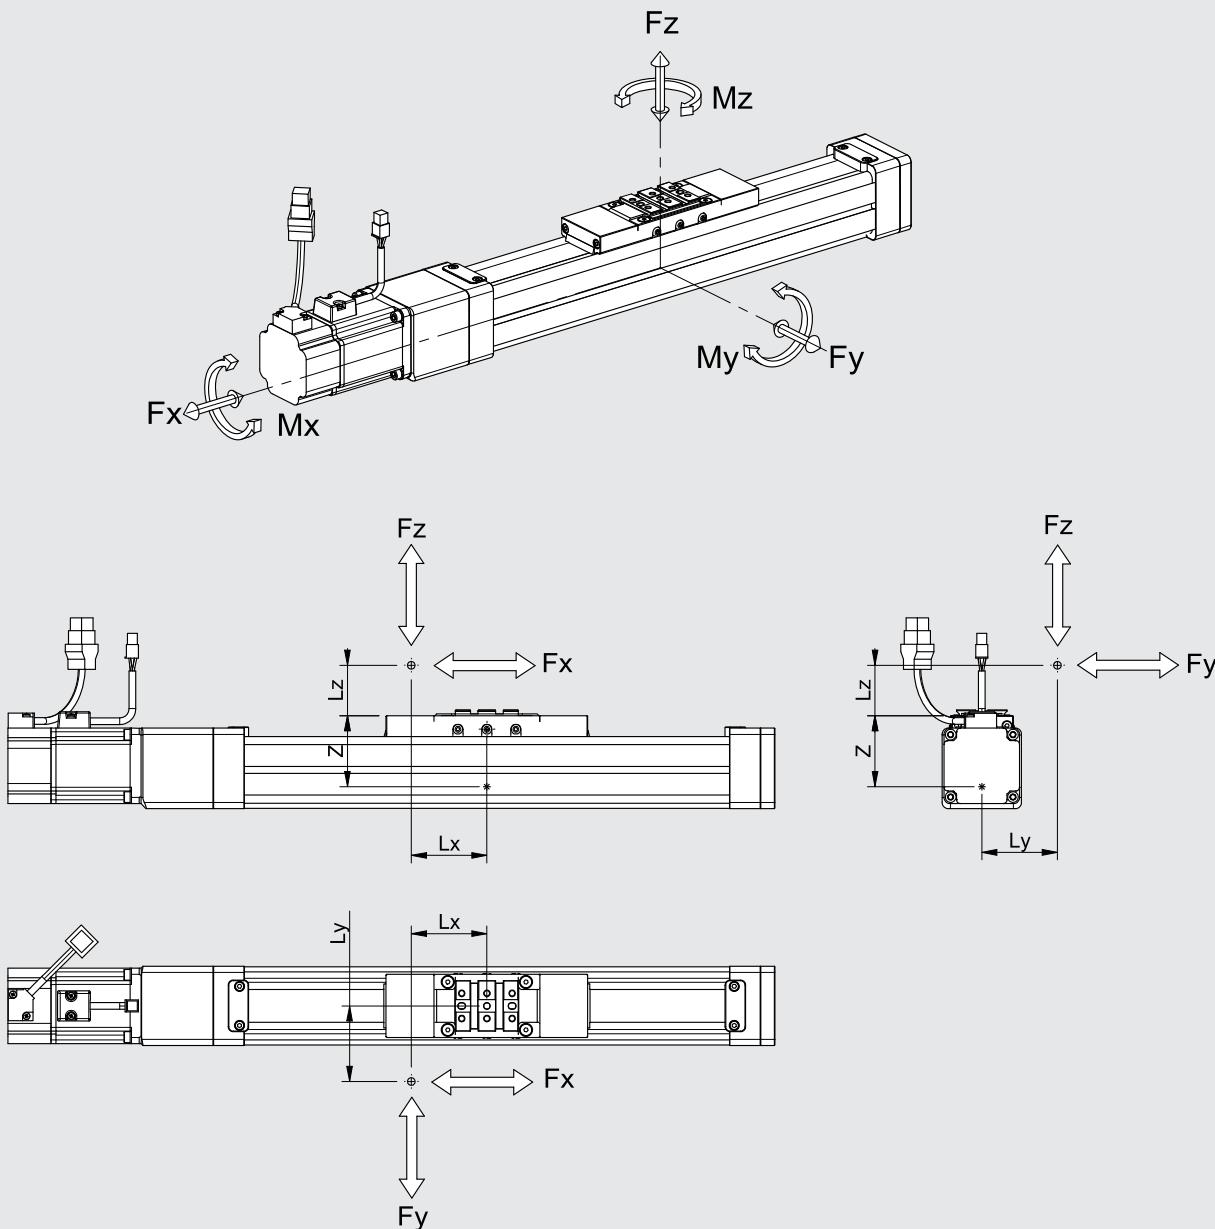

**MASS MOMENTS OF INERTIA**

Worm screw pitch	mm	4	10
J0 at stroke 0	kg mm <sup>2</sup>	2.7909	5.3633
J1 each metre of stroke	kg mm <sup>2</sup> /m	12.0259	17.3353
J2 each kg of load	kg mm <sup>2</sup> /kg	0.4056	2.5355

 Total mass moment of inertia  $J_{tot} = J_0 + J_1 \cdot \text{stroke [m]} + J_2 \cdot \text{load [kg]}$ 
**COMPONENTS**
**ELECTRIC AXIS WITH IN-LINE MOTOR**

**ELECTRIC AXIS WITH GEARED MOTOR**

- ① MOTOR
- ② ELASTIC COUPLING: aluminium / polyurethane
- ③ DOUBLE-ROW ANGULAR BALL BEARING
- ④ BUFFER: polyurethane
- ⑤ RECIRCULATING BALL SCREW: hardened steel
- ⑥ BALL RECIRCULATION PAD: stainless steel / technopolymer
- ⑦ RECIRCULATING BALL SCROLL: hardened steel
- ⑧ RAIL: hardened steel
- ⑨ CYLINDER LINER: anodized aluminium
- ⑩ CARRIAGE LIMIT SWITCH: anodized aluminium
- ⑪ PRETENSIONING CUP SPRING: hardened steel
- ⑫ HEAD COVER: anodized aluminium
- ⑬ CARRIAGE BODY: anodized aluminium
- ⑭ LOWER STRAP SHOE: technopolymer
- ⑮ INTERFACE FOR FIXING: anodized aluminium
- ⑯ PROTECTIVE STRAP: stainless steel
- ⑰ UPPER STRAP SHOE: technopolymer
- ⑱ HEAD: anodized aluminium
- ⑲ MOTOR BEARING: anodized aluminium
- ⑳ BEARING LOCKING RING NUT: zinc-plated steel

- ㉔ TOOTHED TRANSMISSION BELT: reinforced rubber
- ㉕ GEARED MOTOR BEARING: aluminium
- ㉖ TRANSMISSION GUARD: aluminium

## DIAGRAM OF FORCES AND MOMENTS

### STATIC VERIFICATION

When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

Z [mm]	$F_{y0}$ max [N]	$F_{z0}$ max [N]	$M_{x0}$ max [Nm]	$M_{y0}$ max [Nm]	$M_{z0}$ max [Nm]
57	4500	4500	70	450	450

N.B.: The values in the table relates to the maximum admissible loads beyond which serious damage is likely to occur.

$$M_x = F_z \cdot L_y + F_y \cdot (L_z + z) \quad M_y = F_z \cdot L_x + F_x \cdot (L_z + z) \quad M_z = F_y \cdot L_x + F_x \cdot L_y$$

$$\frac{(M_x)}{M_{x0} \text{ max}} + \frac{(M_y)}{M_{y0} \text{ max}} + \frac{(M_z)}{M_{z0} \text{ max}} + \frac{(F_y)}{F_{y0} \text{ max}} + \frac{(F_z)}{F_{z0} \text{ max}} \leq 1$$

### DYNAMIC VERIFICATION

When the cylinder is subjected simultaneously to torque and force, keep to the following equations, where the lengths have to be given in metres.

Z [mm]	$F_y$ max [N]	$F_z$ max [N]	$M_x$ max [Nm]	$M_y$ max [Nm]	$M_z$ max [Nm]
57	2500	2500	35	250	250

N.B.: The values are calculated on the basis of theoretical useful life of 10000 km.

$$M_x = F_z \cdot L_y + F_y \cdot (L_z + z) \quad M_y = F_z \cdot L_x + F_x \cdot (L_z + z) \quad M_z = F_y \cdot L_x + F_x \cdot L_y$$

$$\frac{(M_x)}{M_{x \text{ max}}} + \frac{(M_y)}{M_{y \text{ max}}} + \frac{(M_z)}{M_{z \text{ max}}} + \frac{(F_y)}{F_{y \text{ max}}} + \frac{(F_z)}{F_{z \text{ max}}} \leq 1$$

## CALCULATION OF MEAN AXIAL LOAD $F_m$ AND VERIFICATION

Peak axial load in a work cycle must not exceed the static axial load  $F_o$ . The peak value is usually achieved during upward acceleration in vertical installation. Exceeding this value leads to greater wear and hence shorter life of the recirculating ball screw.

### Mean axial load $F_m$

$$F_m = \sqrt{\sum F_x^3 \times \frac{V_x}{V_m} \times \frac{q}{100}} =$$

$$F_m = \sqrt{F_{x1}^3 \times \frac{V_{x1}}{V_m} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{V_{x2}}{V_m} \times \frac{q_2}{100} + F_{x3}^3 \times \frac{V_{x3}}{V_m} \times \frac{q_3}{100} + \dots}$$

$F_x$  = Axial load at stage x

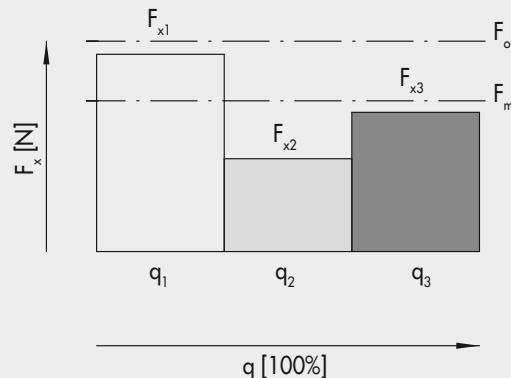

$F_m$  = Mean axial load during extension

$F_o$  = Static axial load

q = Time segment

$V_x$  = Speed in the phase x

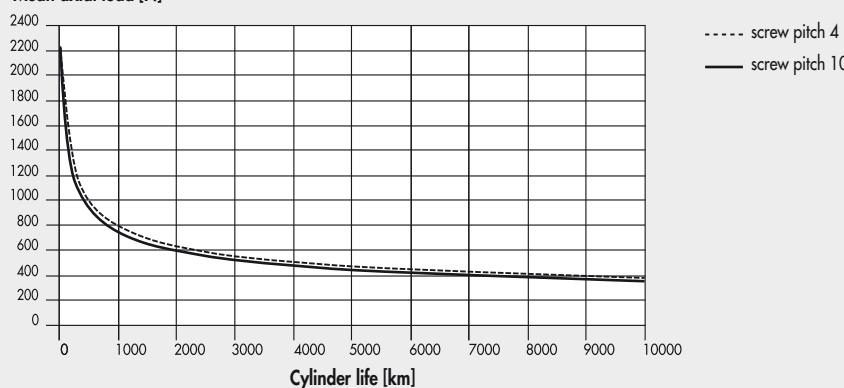

$V_m$  = Average speed

The mean axial load must not exceed the dynamic axial load:  $F_m \leq F$   
The graph below shows the lifecycle of the screw as a function of  $F_m$

## LIFE CHARACTERISTICS AS A FUNCTION OF THE MEAN AXIAL LOAD

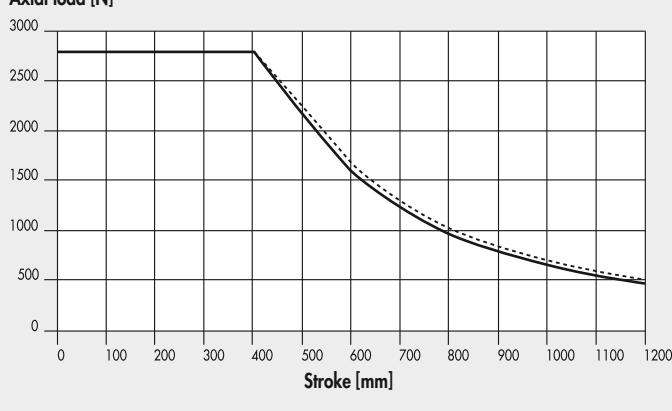

### Mean axial load [N]

## MAXIMUM AXIAL LOAD

The two variables (axial load and stroke) must comply with the conditions indicated in the graph, otherwise this could cause a serious damage.

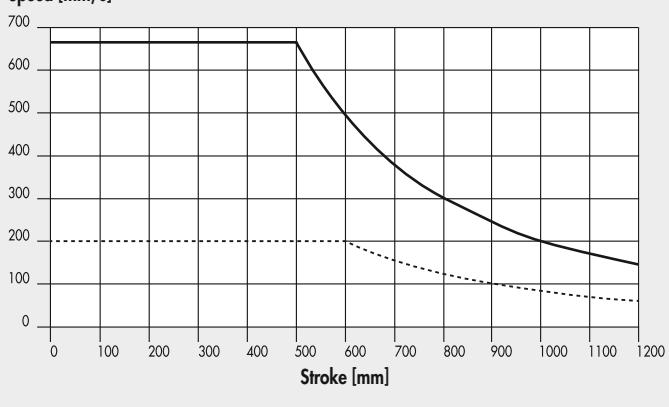

### Axial load [N]

## CRITICAL SPEED

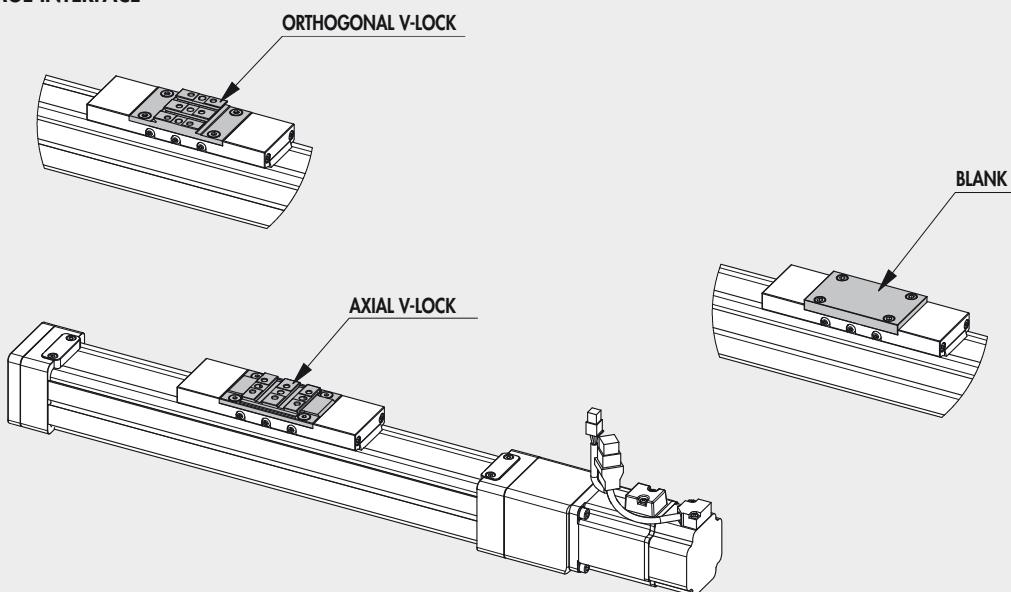

The two variables (axial load and stroke) must comply with the conditions indicated in the graph, otherwise this could trigger resonance phenomena that could impair the good functioning of the system.

### VERSION WITHOUT MOTOR

## AXIAL LOAD CURVES AS A FUNCTION OF SPEED (CYLINDER COMPETE WITH MOTOR AND DRIVE)

**N.B.:** Check that the following constraints are met for each cycle phase:

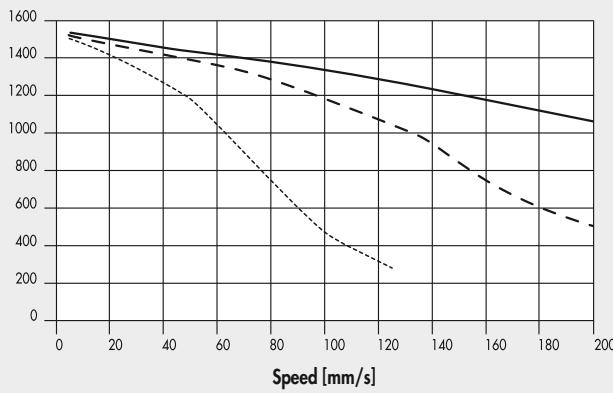

- the maximum movable masses and related acceleration values specified in the data sheets;
- the values specified in the force and moment calculation diagram (including moment of inertia);
- calculation of average axial load and peak axial load.

**N.B.:** The obtainable load values already take the efficiency of the system into account. For STEPPING motors, with the motor off, the drive current is automatically reduced by 50% to prevent overheating. Consequently, available axial load with the motor stopped is also reduced by 50%.

Brushless motor-drive with brake, 3 metres		<b>37C2730000</b>
Brushless motor-drive-encoder, 3 metres		<b>37C2230001</b>
Brushless motor-drive with brake, 5 metres		<b>37C2750000</b>
Brushless motor-drive-encoder, 5 metres		<b>37C2250001</b>
<b>BRAKE</b>		
Supply voltage	VDC	24 ±10%
Braking torque static	Nm	1.3
Absorption	W	6.5

BRUSHLESS motor with BRAKE code **37M4770000** +  
drive code **37D2600001** (3000W)

#### Motor torque [Nm]

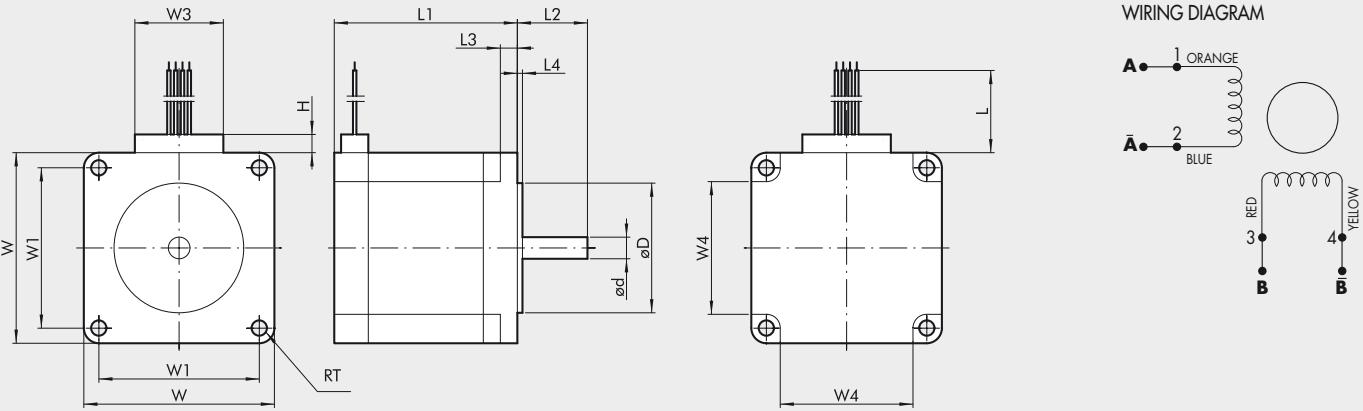

— Nominal torque 37M4770000 + 37D2600001 (3000W)  
- - - Max torque 37M4770000 + 37D2600001 (3000W)

#### TECHNICAL DATA

	MOTOR 37M4770000	
	BRUSHLESS with BRAKE	
Motor type	Nm	<b>9.55</b>
Nominal torque	mm	<b>130</b>
Coupling flange (square)	W	3000
Nominal power	rpm	3000
Nominal speed	rpm	4500
Maximum speed	Nm	9.55
Stall torque	Nm	28.65
Maximum torque	kgmm <sup>2</sup>	1400
Rotor inertia	kg	9.2
Mass	pulse/rev	1048576 (20 bit)
Encoder		IP65
Degree of protection		<b>37D2600001</b>
Drive code		
Connecting cable:		<b>37C3230001</b>
Brushless motor-drive-encoder, 3 metres		<b>37C3730000</b>
Brushless motor-drive with brake, 3 metres		
Brushless motor-drive-encoder, 5 metres		<b>37C3250001</b>
Brushless motor-drive with brake, 5 metres		<b>37C3750000</b>
<b>BRAKE</b>		
Supply voltage	VDC	24 ±10%
Braking torque static	Nm	10

#### NOTES
