HYDAC Filtration Technology...

...the name you can trust for Filtration.

HYDAC filtration technology is the culmination of rigorous laboratory testing as well as practical field-testing. It offers a complete range of filters for liquid and gaseous media.

The HYDAC Filter Division manufactures products tailored to market requirements and to the highest quality standards, backed by modern machinery and a large production capacity.

HYDAC Filtration Technology is based on intensive basic research, technical problem solving, specific customer requirements, and international standardization.

Development, Design, Production, Quality, Service and Distribution...

... are equally important to HYDAC. The concentration of all these functions in our independent filter division guarantees continuity in processing, optimum price/performance ratio, and a consistent quality standard.

Development at HYDAC means designing application-orientated filtration systems based on test results from our research and test laboratories as well as on-site measurements and analysis, taking into account the requirements of the user and the manufacturer.

A skilled development team, using computer-aided analysis, measuring and testing equipment and test rigs, ensures rapid implementation of test results.

Production at HYDAC means large production capacity coupled with modern machinery and, in conjunction with rational manufacturing processes, ensures an optimum price/performance ratio.

Quality has absolute priority at HYDAC. It is guaranteed by continuous production control and systematic laboratory tests. Service and distribution – worldwide – through our international network of sales offices and production centres.

■ Many years of experience coupled with fast CAD design,

■ supported by intensive research and testing,

■ result in a market-orientated product range.

■ Quality and safety guaranteed by consistent clean room production.

■ Every piece a quality product: NC controlled processing,

■ semi and fully automatic manufacturing plant,

■ strict controls, careful packaging, rapid despatch.

HYDAC Filters: Efficiency with Performance.

HYDAC Filters...

...Their quality guarantees reliable performance and increases the service life of components, systems and machinery.

Due to their design and application-orientated characteristics, HYDAC filters provide superior performance, such as:

- high beta value stability across a wide differential pressure range
 - high pressure stability
 - high contamination retention capacity
 - long service life
 - low pressure drops
 - wide selection of filtration ratings
 - extensive model range
 - optimum filter materials for specific applications
 - wide range of applications
- and therefore increase the protection of components and reduce the downtime of machinery and systems.

HYDAC Servicenter

The HYDAC Servicenter, together with its service partners, offers you a complete package of services.

After in-depth consultation, you can create a service package tailored to your needs.

Whether it be support of existing in-house maintenance or sub-contracting the complete package, we will always find the best solution for you.

...more about Filtration?

Filters for Process Engineering

Working pressure: up to 600 bar
Working temperature: up to 400 °C
Filter elements: from 1 µm absolute

Units for in-house servicing

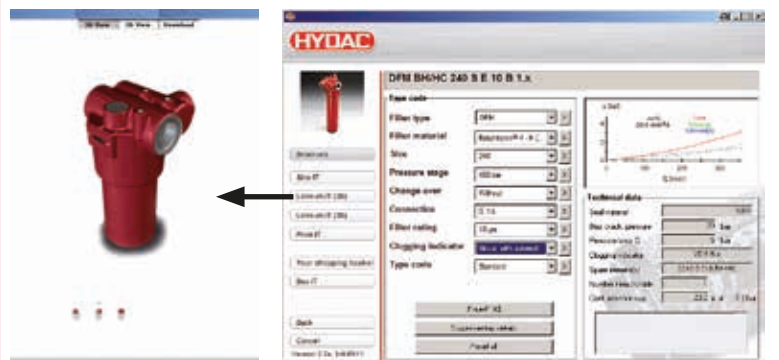

Oil sampling and other laboratory units,
portable and stationary filter pump transfer units,
combined oil transportation and filtration units,
dewatering units.

Filter-IT! – The Electronic Filter Catalogue.

Here you will find the whole HYDAC Filtration Technology product range incorporated in one location: from technical data to product benefits, from brochures to spare part lists and parts explosion drawings for every filter size and type of connection.

In addition, using the "Look-at-IT" function, it is possible to download the 3-D models and 2-D drawings for all filters in any format.

The sizing program "Size-IT" further provides computer-aided filter sizing, specific to your particular system and application profile

The electronic filter catalogue (Filter-IT) can be found on our website www.hydac.com.

Filter Handbook

In the following pages you will find the basic principles of filtration illustrated and explained using simple examples.

For filtration and hydraulics specialists requiring more detailed information, we recommend downloading our complete filter handbook (www.hydac.com).

If you have any questions about the contents of this brochure or if you have a specific problem to solve, we will be happy to help you in person. Please contact your nearest HYDAC representative or contact our headquarters.

Awareness of fluids

As a manufacturer or operator of machines or systems in today's fast-moving and globalised market in Central Europe, we must make use of every possible means to continually improve competitiveness.

Primarily, this implies reduction in costs, not only of the purchase cost but of all costs generated during the **whole lifetime** of the system (Life Cycle Cost Reduction).

The condition of the operating fluid plays a key role in this objective since approximately **70 % of all breakdowns of hydraulic and lubrication systems can be attributed to the condition of the oil** – with proven detrimental effects on the efficiency and profitability of systems and equipment.

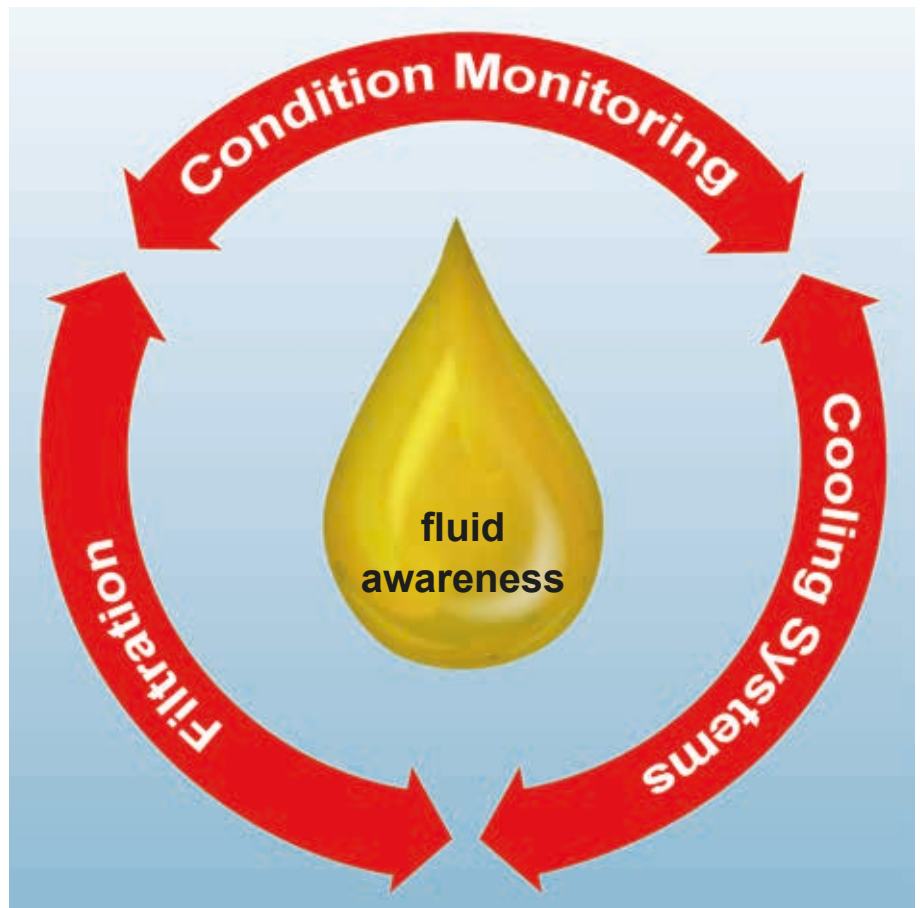

Causes of breakdowns in hydraulic and lubrication systems

Once the direct connection between fluid condition and the profitability of hydraulic and lubrication systems is recognised, the action required becomes obvious: cooling, continuous online monitoring and a well-engineered filtration concept, which guarantee the efficiency and operational reliability of the entire system.

Although this filtration handbook - as the name suggests - deals primarily with the "filter" component, HYDAC experts will also provide you with modern solutions which are specific to your system in the areas of cooling and condition monitoring.

Only by taking an integrated approach is it possible to improve the condition of the fluid used and to reduce the Life Cycle Costs.

As HYDAC's hydraulic experts, we want to focus attention on **fluid awareness** and we would like to share our experience with you. The following pages relate to filtration, but we can also help you in relation to cooling and condition monitoring if required.

Why is filtration so important?

Selecting the optimum filtration solution contributes significantly to preventing damage caused by contamination, to increasing the availability of the system and therefore to increasing productivity considerably.

The new filter element technology Betamicron®4 has been specially developed for the reduction of the Life Cycle Cost. The previous glass fibre elements from HYDAC (Betamicron®3 generation) provided complete security: a high level of fluid cleanliness and long-term stability for your hydraulic or lubrication system.

The new generation goes one better: with further improvements to the performance data the elements with Betamicron®4 technology ensure the highest fluid cleanliness. By optimizing the filter media structure both the separation performance and the contamination retention capacity have increased to a large extent. This means that sensitive components are protected over the long term and the filter element has a significantly longer service life.

Furthermore, even fluids with extremely low conductivity can be filtered without electrostatic discharge taking place within the filter element, due to a special feature of the filter mesh pack. This is another benefit therefore in the area of operating reliability and gives HYDAC the cutting edge in the area of element innovation.

The table on the right summarizes the positive effect of the new element technology, Betamicron®4, on the Life Cycle Cost of your machine or system.

		Optimised mesh-pack structure	Optimised longitudinal seam	Zinc-free composition	Spiral lock support tube	Protective outer sleeve	Electr. discharge capability

More detailed information such as technical specifications and customer benefits can be found in the brochure "Filter Elements Betamicron®4. For Reduced Life Cycle Cost".

What kinds of damage does contamination cause?

Contamination has a detrimental effect on the function of hydraulic and lubricating fluids, e.g. the transfer of heat and energy, even to the point of system failure.

Subsequent damage analyses have shown that approx. 75% of system failures are attributed to damage to the components used - caused by contamination in the operating fluid.

Causes of contamination

What are the causes of contamination and which mechanisms can lead to a rise in the costs outlined above?

The following illustration indicates possible contamination sources:

Origin / formation of contamination:

Built-in contamination from integrated components (e.g. valves, fluids, cylinders, pumps, tanks, hydraulic motors, hoses, pipes)

Contamination produced during assembly of the system, by opening the system, during system operation and during fluid-related system failure.

Contamination entering from outside the system, through:

- tank breathing
- cylinders, seals

Contamination entering the system during maintenance procedures

- system assembly/disassembly
- opening the system
- filling with oil

If these, usually high-value components are damaged by solid contamination in the hydraulic and lubricating media, system faults, including unplanned shutdowns can occur.

The severity of the component damage depends on the material of the contamination, the operating pressure, the nature (round or sharp-edged) and size and quantity of particles.

As a rule of thumb: the harder the particles, the more extensive the component damage and the higher the operating pressure, the more forcefully the particles become lodged in the lubrication clearance.

It often goes unrecognized that the majority of these solid particles is smaller than 30 μm and therefore they are not visible to the naked eye. This means an apparently clean fluid can, in fact, be badly contaminated.

Particularly critical are particles which are the same size as the clearance between moving parts.

This is compounded by the fact that hydraulic users are constantly demanding smaller and lighter, high-performance components, which reduces the clearance even further.

In the following diagrams you will find the typical clearances.

On hydraulic pumps:

On valves:

- Servo valve 1 - 4 μm
- Proportional valve 1 - 6 μm
- Directional control valve 2 - 8 μm

The operational or dynamic lubricating film is not the same as the machine clearance and is dependent on the force, speed and viscosity of the lubrication oil.

Therefore the lubricating film separates the moving surfaces in order to prevent metal-to-metal contact.

Components	Clearance (μm)
Plain bearing	0.5-100
Ball bearing	0.1-3
Hydrostatic ball bearing	1-25

What types of wear are there?

1. Abrasion

caused by particles between reciprocating surfaces.

2. Erosion

caused by particles and high fluid velocity.

3. Adhesion

caused by metal-to-metal friction (loss of fluid).

4. Surface fatigue

surfaces damaged by particles are subjected to repeated stress.

5. Corrosion

caused by water or chemicals (not examined below).

Effects of wear in the case of a hydraulic cylinder:

Rod seal wear
→ External oil leak

Guide bush wear
→ Loss of rod alignment

Piston seal wear
→ Loss of cylinder speed
→ Loss of holding ability

Piston bearing wear
→ Loss of rod alignment

1. Abrasion

Abrasion caused by foreign bodies

Effects of abrasion:

- Changes to tolerances
- Leakage
- Reduced efficiency
- Particles produced in the system create more wear!

Damaged piston rod

Effects of erosion:

The high velocity of the fluid forces existing particles against the corners and edges of the system. Other coarse and fine particles therefore become detached from the surface and there is a gradual attack on the surfaces in the system.

2. Erosion

Erosion damage on the cog wheel

Effects of adhesion:

Low speed, excessive load and/or a reduction in fluid viscosity can reduce the oil film thickness. This can result in metal-to-metal contact, and also possible shearing.

3. Adhesion

Adhesion on ball bearing

The smallest cracks in the surface are hollowed out causing material to break off, therefore creating new particles. This action causes an increase in wear.

4. Surface fatigue

Surface fatigue on ball bearing

How clean should the fluid be?

Classification of the solid particle contamination

Solid particle contamination in lubrication and hydraulic fluid is classified according to ISO 4406/1999.

To determine the cleanliness level the solid particles present in 100 ml fluid are counted, sorted according to size & quantity and classified into particle ranges.

Depending on the method of particle counting, there are 2 or 3 ranges:

The ISO Code can be "translated" into a maximum particle quantity for each particle size range with the aid of the adjacent table.

This code is specified for each size range.

The oil cleanliness level determined by electronic particle counters is expressed as a combination of three numbers, e.g. 21/18/15; the particle quantity determined by microscopic counting is expressed as a combination of two numbers, e.g. -/18/15.

Particle counting method	Particle sizes (Code no.)		
	>4 μm _(C)	> 6 μm _(C)	> 14 μm _(C)
Automatic particle counter	>4 μm _(C)	> 6 μm _(C)	> 14 μm _(C)
Microscopic counting	---	> 5 μm	> 15 μm

ISO Code (to ISO 4406)	Particle quantity/100ml	
	from	to
5	16	32
6	32	64
7	64	130
8	130	250
9	250	500
10	500	1000
11	1000	2000
12	2000	4000
13	4000	8000
14	8000	16000
15	16000	32000
16	32000	64000
17	64000	130000
18	130000	260000
19	260000	500000
20	500000	1000000
21	1000000	2000000
22	2000000	4000000
23	4000000	8000000
24	8000000	16000000
25	16000000	32000000
26	32000000	64000000
27	64000000	130000000
28	130000000	250000000

Determined using...

...electronic particle counter

21 / 18 / 15
>4μm_c >6μm_c 14μm_c

...microscopic counting

- / 18 / 15
>5μm_c 15μm_c

Typical cleanliness level:

New oil, delivered in drums

New oil, delivered in road tanker

New oil, delivered in mini-container

Required for modern hydraulic systems

Cleanliness requirements for lubricating and hydraulic components

The cleanliness level required in lubricating and hydraulic systems is determined by the most sensitive component.

Numerous manufacturers of components for lubrication, industrial and mobile hydraulics specify the optimum cleanliness requirements for their components. If more heavily contaminated, the fluid can lead to a significant reduction in service life of those components. Therefore, we recommend contacting the particular manufacturer for written recommendations concerning the cleanliness of the fluid.

In the case of warranty claims, this information is important in order to reject claims for damages. If the component manufacturers do not have specific data concerning the required cleanliness level, the following table can be used:

The cleanliness levels shown in the table are based on an operating pressure from 100 to 160 bar, a normal level of ambient contamination and normal system availability.

Therefore, the following criteria must be taken into account when determining the required cleanliness class of the fluid:

Type of system/Area of application/Components	Recommended cleanliness class
Systems with servo hydraulics sensitive to fine contamination	15/13/10
Industrial hydraulics ● Proportional technology ● High pressure systems	17/15/12
Industrial and mobile hydraulics ● Solenoid control valve technology ● Medium pressure and low pressure systems	18/15/12 19/16/14
Industrial and mobile hydraulics with low requirement for wear protection	20/18/15
Forced-feed circulatory lubrication on transmissions	18/16/13
New oil	21/19/16
Pumps/motors ● Axial piston pump ● Radial piston pump ● Gear pump ● Vane pump	18/16/13 19/17/13 20/18/15 19/17/14
Valves ● Directional valves ● Pressure valves ● Flow control valves ● Check valves ● Proportional valves ● Servo valves	20/18/15 19/17/14 19/17/14 20/18/15 18/16/13 17/15/12
Cylinders	20/18/15

	Correction factor for the recommended cleanliness
Operating pressure	less than 100 bar more than 160 bar
Expected service life of the machine	up to 10 years over 10 years
Repair and spare part costs	high
Downtime costs due to shutdown	up to €10,000/hr. over €10,000/hr.
Pilot system (system which significantly affects the manufacturing process or cycle)	

What kinds of filters are there and when are they used?

Installation location of a filter

Suction filters

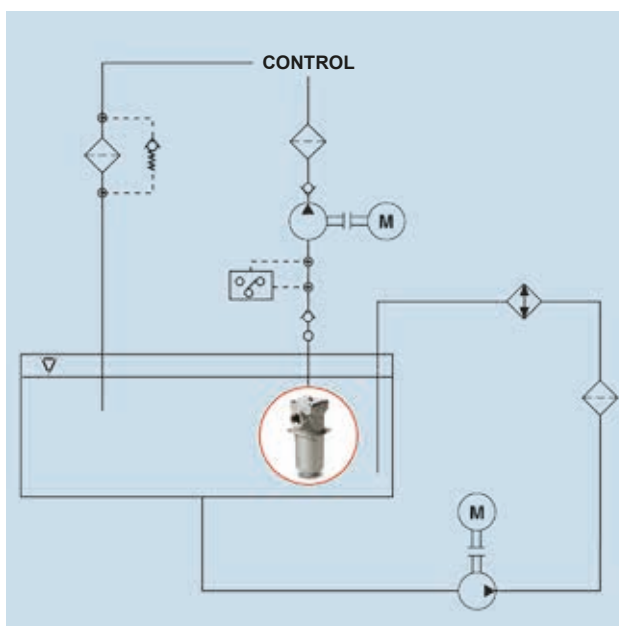

These filters are installed between the tank and the booster pump to protect the pump from coarse contamination which can cause a high level of wear in the pump.

They can be installed inline, at the intake port in the tank or below the tank.

To prevent hazardous operating conditions for the pump, we recommend using a vacuum gauge between the filter and pump.

Due to the risk of pump cavitation, relatively coarse filter materials with a filtration rating of $> 25 \mu\text{m}$ are used.

For this reason, suction filters are **not** suitable for ensuring the component protection necessary for the economical operation of the system.

SF, SFM, suction filter element
Extract from product range

Suction filters	
Advantages	Please note
<ul style="list-style-type: none"> ● Protects the pump against coarse contamination 	<ul style="list-style-type: none"> ● Fine filtration not possible ● Pump must be protected against cavitation (vacuum switch) ● Risk of cavitation, particularly at low temperatures (cold start) ● To guarantee protection from wear, other filters must be installed

Pressure filters

This type of filter is defined in the DIN 24550 standard as an inline filter designed for a specific nominal pressure. It can be installed before or after the boost pump, but also in the return line between components and tank.

Wherever the filter is installed, the housing must be sized in accordance with the system pressure, the pressure pulsations and the flow rate.

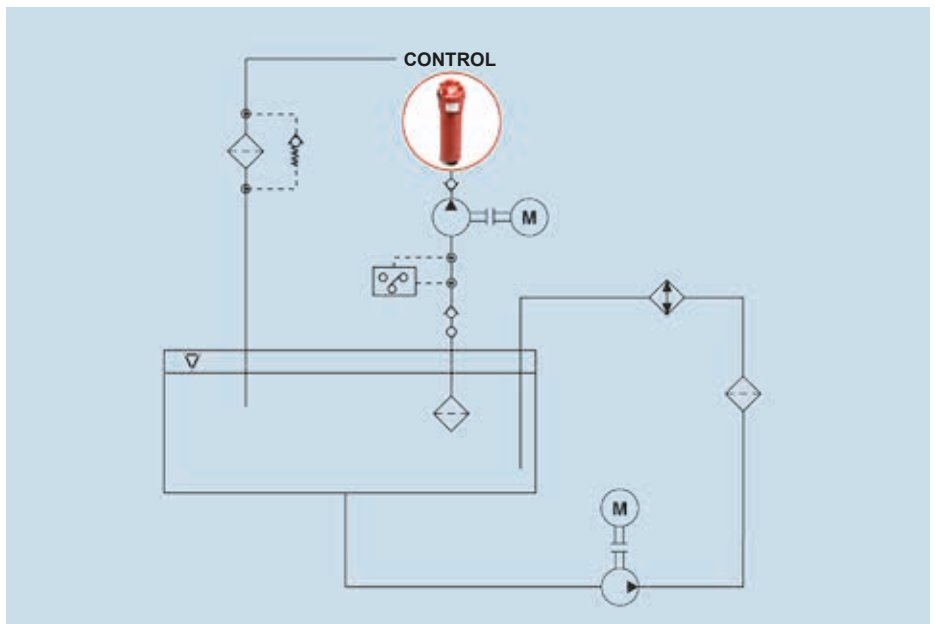

To enhance the reliability of the whole hydraulic and lubrication system, filter housings are designed to have high fatigue strength. The filter housings are flow-optimized to be able to achieve a low pressure drop and a compact, space-saving design. They therefore make a significant contribution to the economy of the whole system. On mobile machines which comply with the latest regulations, the space-saving housing concept offers considerable advantages. To reduce the risk of unwanted leaks from the inline filter during operation, these can be integrated into a cost-optimized hydraulic or lubrication module. To protect particularly sensitive components, such as servo and proportional valves, we recommend installing this type of filter immediately before the component. However, in particular, the high dynamics in the control circuits must be taken into account in this case.

Inline filters which are fitted with filter elements where the flow is from out to in, should preferably be installed in systems which have high pressure pulsations and where the filter housing has no bypass valve.

On systems with a high contamination load, as with cooling lubricants, for which additional effective filtration of metallic particles is required, HYDAC recommends installing filter housings in which the flow through the filter elements is from in to out.

Depending on where the inline filter is installed in the machine, this type of housing offers advantages for element change.

Pressure filters must always be fitted with a clogging indicator. Before particularly critical components, only inline filters without bypass valves should be used. Such filters must be fitted with a filter element which must itself be able to withstand higher differential pressures, without sustaining any damage.

Pressure filters

Advantages	Please note
<ul style="list-style-type: none"> ● Filtration is directly upstream of the components which need protection ● Required cleanliness level is guaranteed 	<ul style="list-style-type: none"> ● More expensive filter housing and element due to pressure load ● Complex element construction as a result of the necessary differential pressure resistance ● Pump is not protected ● In the case of single filters, the system has to be shut down to change the element.

Return line filters

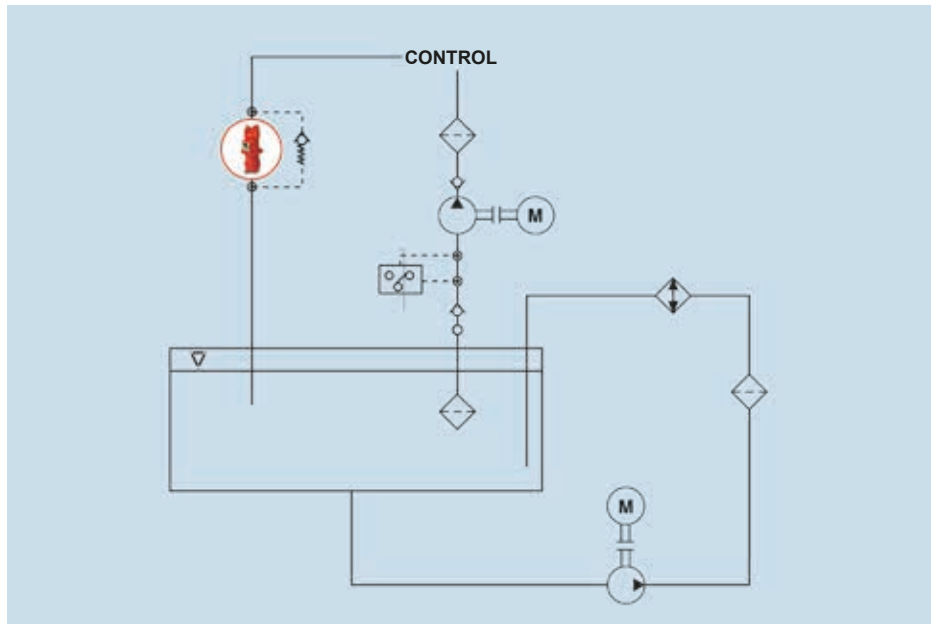

This type of filter can either be installed inline (in the hydraulic tank line) or as a tank-mounted filter (on top of the hydraulic tank).

To prevent dangerous malfunctions in hydraulic components as a result of excessive back-pressure in the return line, return line filters are usually fitted with a bypass valve. For systems which are operated around the clock, the filter housing must be of the change-over type so that the system does not need to be shut down for filter maintenance. So that the oil flow is not interrupted during the change-over process, causing undersupply to the lubrication points, the change-over valve is designed with negative overlap.

When selecting the correct filter size, the maximum possible flow rate must be taken into account. This corresponds to the area ratio of piston to piston minus the rod of hydraulic cylinders and can be greater than the flow rate generated by the pumps.

In order to prevent possible foaming of the fluid in the tank, make absolutely sure that the fluid outlet from the filter is always below the fluid level in all operating conditions. It may be necessary to fit a pipe or flow rate diffuser in the filter outlet. It is important that the distance between the floor of the tank and the end of the pipe is no less than two to three times the pipe diameter.

Return line filters can be fitted with breather filters as additional equipment.

Return line filters

RF

NF

RFN

Extract from product range

Return line filters

Advantages	Please note
<ul style="list-style-type: none"> ● All fluid flowing back to tank is filtered ● No system contamination reaches the tank ● Filter housing and element are excellent value 	<ul style="list-style-type: none"> ● In the case of high-value components a pressure filter must be used in addition ● It is advisable to fit a bypass valve ● In the case of elements with low differential pressure resistance, it is possible for the element to burst as a result of multiple pulsations ● In the case of single filters, the system has to be shut down to change the element ● Large filters are required for high flow rates (area conversion for differential cylinders)

Return line & Suction Boost Filters

This type of filter has the advantage that the pump capacity (pressure and flow rate) installed in the steering and working hydraulics is implemented to supply the usually high-value drive hydraulics, which have a strict requirement for oil cleanliness, exclusively with filtered hydraulic oil.

In addition, dangerous operating conditions where negative pressure occurs on the suction side of the boost pump, is reduced to a minimum. Excellent cold start characteristics for the whole unit are the result.

To enhance the economy of the whole unit, this space-saving return line & suction boost filter, which is usually installed as a "return line filter" on the hydraulic tank, provides the means of reducing the oil circulation volume by installing a smaller tank.

In order to maintain the initial load of approx. 0.5 bar at the connection to the charge pump, a surplus of at least 10% between the return line volume and the suction volume is required under all operating conditions.

Through the use of a pressure relief valve, when the Δp reaches 2.5 bar, the oil flows directly into the tank (no bypass to the closed circuit).

If, in addition to the flow from the open circuit, the leakage oil from the hydrostatic drive also goes through the filter, then the permitted pressure of the leakage oil at the filter must not be exceeded (taking into account the pressure drop of the leakage oil lines, of the oil cooler and the pressure relief valve) to protect the radial shaft seal rings.

Return line & Suction Boost Filters

RKM

Return line & Suction Boost Filters

Advantages	Please note
<ul style="list-style-type: none"> ● Finely filtered oil supplied to consumer (increases the availability) ● Oil is pre-charged in the suction connection (0.5 bar) (prevents cavitation, less wear) ● Replaces several filters (lower fitting costs, only ONE spare element) ● Extremely low pressure drop (full filtration at low temperatures) ● Various options (thermal bypass valve, multi port) 	<ul style="list-style-type: none"> ● Useful if under operating conditions the return line volume is greater than the volume needed on the suction side

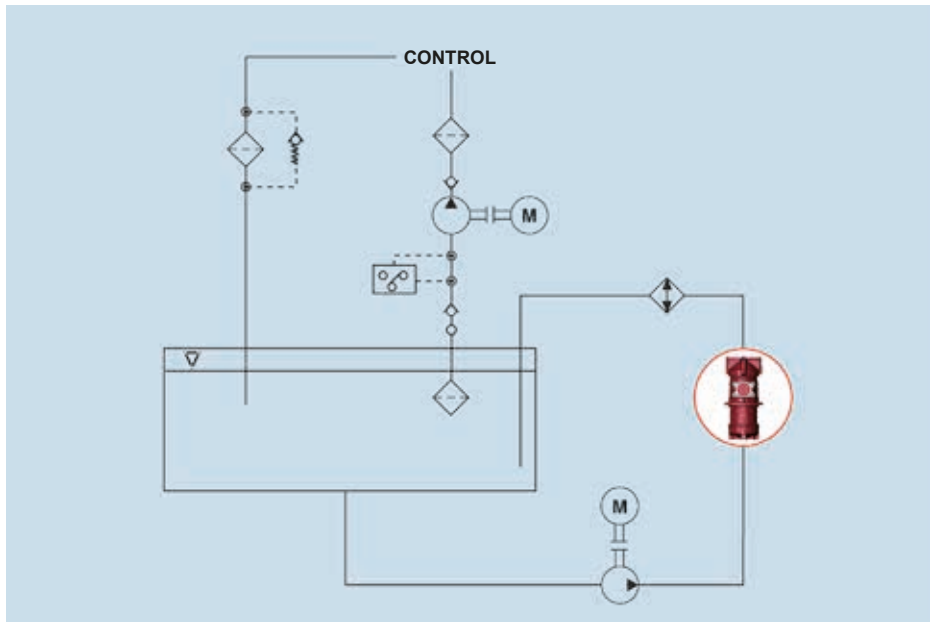

Offline filters

In hydraulic systems with heavy loads, additional offline filters are used increasingly to avoid the accumulation of fine particles.

In contrast to main filters, only part of the whole flow in the system is filtered by offline filters.

Excellent oil cleanliness levels can be achieved through continual filtration, regardless of the operating cycle of the machine. In addition, the main filters are relieved, meaning that element changing intervals can be extended.

Offline filter systems should be used in addition to main filters. In this case the main filter should be sized as a protective filter, i.e. filtering less finely and without a bypass valve.

Offline filters

Extract from product range

NF

Offline filters

Advantages

- Excellent cleanliness classes
- Filtration independent of the system
- High contamination retention capacity of filter elements as a result of pulsation-free, low and constant flow through the filter elements
- Element change possible without stopping the machine
- Cost savings as a result of lower material costs
- Less time spent on maintenance
- Fewer downtimes
- Cost-effective filter elements
- Possible to fill hydraulic system
- Can be easily retrofitted in systems with insufficient filtration
- Dewatering of the fluid is possible
- Service life of fluid in the system is extended

Generally speaking, offline filters should be installed:

- if a high rate of contamination is expected, e. g. on production test rigs, large-scale systems in dusty areas, cleaning systems
- when installing a separate cooling circuit
- when there are vigorous changes in system flow rate

Tank breather filters

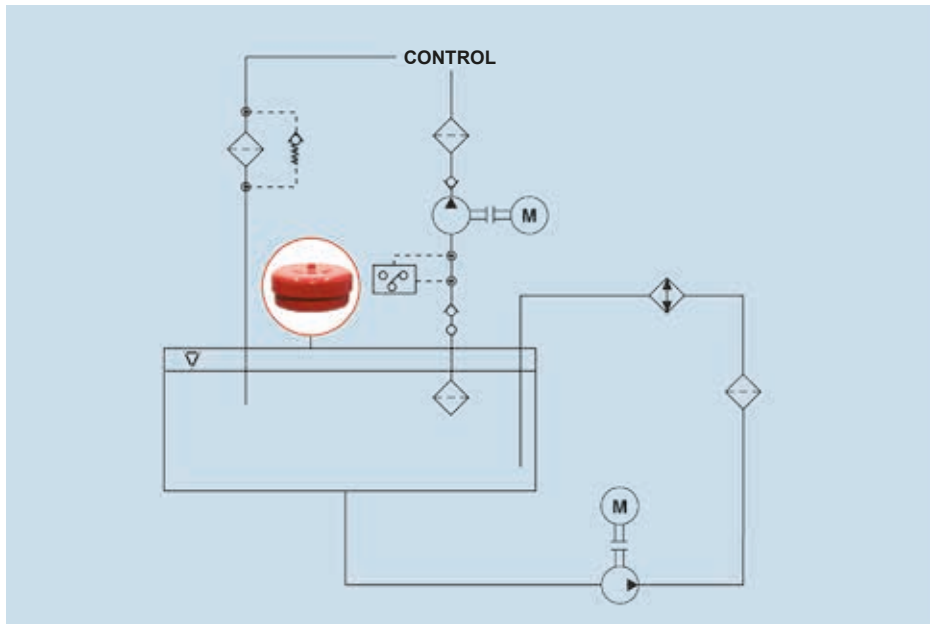

Tank breather filters are one of the most important, yet neglected, components in filter design.

As a result of changes in temperature and of using cylinders or accumulators, the oil level in the tanks of hydraulic and lubrication systems is subject to constant fluctuations.

The resulting pressure differential to the ambient is equalized by an exchange of air which means contamination can get into the tanks.

Breather filters can prevent contamination from entering. Ideally the breathers should be of at least the same filtration rating as the system filter in the hydraulic circuit. By using breather filters with double check valves, the air exchange between the tank and the ambient can be significantly reduced, minimizing the amount of contamination and dust entering the tank and increasing the service life of the breather filter.

Where there are high temperature changes and high humidity, water also enters the tank. HYDAC BD filters prevent water from entering and therefore improve the fluid performance.

Offline e.g. cooling circuit	<ul style="list-style-type: none"> ● Continuous cleaning of the hydraulic fluid, also when system is shut down ● Maintenance can be carried out when system is running ● Filtering action is not impaired by fluctuations in flow and provides optimum service life and efficiency of filter elements ● Possible to fill the tank with filtered new oil ● Particular cleanliness level can be achieved and maintained accurately. ● Possible to install fluid cooling easily 	<ul style="list-style-type: none"> ● High investment costs ● Additional space-requirement ● No direct component protection 	NF, NFD, LF, MF

Filter selection

Filter efficiency is the most important but not the only factor involved when evaluating the filter design. A filter can be ineffective if it is installed in the wrong place and if it is given the wrong job.

When creating a filtration concept, some **fundamental rules** play a crucial role.

For example, the function of a hydraulic filter is always to reduce wear which means it should filter to a finer level than the critical tolerances. Filters should be used with the highest possible flow rate. Suitable seals on cylinders and on breather filters should prevent contamination from entering the system etc.

Therefore we can distinguish between **protective filters** and **working filters**.

Restricting the flow velocity

Since specific flow velocities in the connection lines must not be exceeded, depending on the filter type, we recommend only special maximum flow rates.

Here we give guideline values which are based on our experience. Exceptions, depending on the application, are of course possible and reasonable.

Determining the appropriate filter element

Depending on the conditions of the system and the environment, filters with the same filtration rating perform differently.

The following cleanliness classes are typical for HYDAC elements:

Protective filter	Working filter
● Component protection	● Cleaning function
● No bypass valve	● Flow with least possible pulsations where filter installed
● Does not prevent long-term wear	● Bypass valve available as an option
● Filters more coarsely than working filter	● Differential pressure indicator is recommended
● High differential pressure resistant filter elements	● Use of low differential pressure resistant elements is possible

Threaded connection	Maximum recommended flow rate in l/min				
	Suction filter 1.5 m/s	Return line filter 4.5 m/s	Pressure filter up to 100 bar 4.5 m/s	Pressure filter up to 280 bar 8 m/s	Pressure filter up to 420 bar 12 m/s

Selection of the appropriate filter material

The variety of applications of HYDAC filters has given rise to different element models, each specifically optimized for particular requirements. We are therefore in a position to provide you with the type of element most technically and economically appropriate for your special application. The following table outlines the most important filtration media. Our sales team is always available to help you select the filtration media which is most appropriate for your application.

	Element designation	Construction of filter mesh pack	Typical features
Synthetic fine filtration materials			
	Optimicon® ON (20 bar)	Multiple-layer, supported, pleated (Helios pleat geometry) filter mesh pack with glass fibre	<ul style="list-style-type: none"> ● Low rise in differential pressure ● New "Helios" pleat geometry to stabilise the pleats and increase available area of incident flow ● First class filtration efficiency ● Outer wrap with improved diffuser effect
	Optimicon® Power ON/PO (10 bar)	Multi-layer, supported, pleated filter mesh pack with glass fibre	<ul style="list-style-type: none"> ● Low pressure drop ● Filtration performance defined according to API specifications ● Homogeneous flow of the fluid ● Stat-Free® technology inclusive
	Optimicon® Pulse ON/PS (20 bar) OH/PS (210 bar)	Single-layer, supported, pleated (Helios pleat geometry) filter mesh pack with glass fibre	<ul style="list-style-type: none"> ● Particularly high fatigue strength ● Low rise in differential pressure ● Integrated Stat-Free® technology
	Optimicon® Pulp & Paper ON/PP (10 bar)	Multiple-layer, supported, pleated (Helios pleat geometry) filter mesh pack with glass fibre	<ul style="list-style-type: none"> ● Differential pressure greatly reduced ● Significantly increased contamination retention capacity ● Exclusive micro-glass media ● Outer wrap with improved diffuser effect
	Betamicron® BN4HC (20 bar) BH4HC (210 bar)	Multi-layer, supported, pleated filter mesh pack with glass fibre	<ul style="list-style-type: none"> ● High contamination retention ● High rate of particle separation over a wide differential pressure range ● High resistance to pressure and flow rate fluctuations
	Mobilemicon MM	Multi-layer, supported, pleated filter mesh pack with synthetic fibre	<ul style="list-style-type: none"> ● High rate of particle separation ● Low pressure drop ● Sufficient contamination retention ● First class filtration in the suction range possible
	Ecomicon ECON2	Multi-layer, supported, pleated filter mesh pack with glass fibre, support tube and end caps in electrically conductive synthetic material	<ul style="list-style-type: none"> ● High rate of particle separation ● Low pressure drop ● High contamination retention ● Uses first class synthetic materials which can easily be disposed of ● Low weight ● Free of steel and iron
Paper			
	Paper P/HC	Simply supported, pleated, organic paper (usually impregnated with phenolic resin)	<ul style="list-style-type: none"> ● Cheap element ● Low level of particle removal and contamination retention (Multipass usually not possible) ● Low pressure drop ● Low pressure stability (bypass absolutely necessary)
Stainless steel and wire mesh materials			
	Wire mesh or dutch weave W/HC or T/HC	Multi-layer or single-layer, supported, pleated square mesh in stainless steel or dutch weave	<ul style="list-style-type: none"> ● Protective filter with low filtration performance and contamination retention
	Chemicon and Metal fibre V	Multi-layer, pleated mesh pack with sintered stainless steel fibre	<ul style="list-style-type: none"> ● All the components used in the element are in stainless steel. ● On the element type "metal fibre V" the components are bonded using a 2-component adhesive (max. temperature 100 °C). ● On the "Chemicon" element the element components are bonded without the use of adhesive.

Filter sizing

Once the element material, the required filtration rating and the filter construction have been established, the size of the filter can be determined. Here we can assume that the initial pressure drop of a filter does not exceed a specific value, or that it comes as close as possible to this value (see adjacent table).

The total pressure drop of a filter (at a specific flow rate Q) is the sum of the housing Δp and the element Δp and is calculated as follows:

Example

Sizing a return line filter, tank mounted, type RFM 150, element material Betamicon®4, 10 µm filtration rating, Flow rate in the return line: 60 l/min, operating fluid: ISO VG 46, operating temperature: 40 °C.

Note:
At 40 °C this oil has an operating viscosity of approx. 46 mm²/s (always take manufacturer's data into account).

Use as	Filter type	Total initial differential pressure (with new filter element)
Working filter	Return line filter, Pressure filter with bypass valve	0.15 to 0.2 • Pressure setting of clogging indicator (P _{indicator})
	Offline filter, Inline filter, Separate units	0.15 to 0.2 bar
Protective filter	Pressure filters without bypass valve	0.3 • P _{display}
	Suction filter	0.04 bar

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = \text{please refer to housing curve (see brochure)}$$

$$\Delta p_{\text{element}} = Q \cdot \frac{\text{element gradient coefficient}}{1000} \cdot \frac{\text{operating viscosity}}{30}$$

Max. initial differential pressure: 1 bar (=0.2 • P_{indicator} = 0.2 • 2 bar = 0.4 bar)

$\Delta p_{\text{housing}}$:
(please refer to "RFM" brochure)

RFM 90, 150

$\Delta p_{\text{element}}$:
(for gradient coefficients for element 0150 R 010 BN4HC please refer to "Filter Elements" brochure or "RFM" brochure)

$$60 \text{ l/min} \cdot \frac{4.0}{1000} \cdot \frac{46 \text{ mm}^2/\text{s}}{30} = 0.368$$

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}} = 0.09 + 0.368 = 0.458 \text{ bar}$$

What is the procedure in practice?

If you calculate on the generous side, i.e. choosing the larger filter, this will provide a longer service life, and will probably cost more. But if the sizing is only just adequate, i.e. you select the smallest possible filter, you risk a shorter service life and reduced component protection despite lower purchase costs.

The aim, of course, is to find the most economical filter whilst taking into consideration the total system life cycle (reduction of the Life Cycle Cost).

Computer-aided filter sizing using Filter Sizing Program "Size-IT".

Size-IT enables computer-aided filter sizing, specific to the particular system and application profile.

Size-IT is a component of our electronic product catalogue, **Filter-IT**.

We will, of course, be pleased to send you a copy. Alternatively the program is available on our website (www.hydac.com).

Size-IT automatically computes all calculations, which in the previous example, had to be carried out painstakingly step by step.

Possible errors when reading graph data are avoided; the time saving is considerable.

The size of the filter can be determined with the help of

- Housing and element pressure drop curves in the brochures (= manual filter sizing)
- Filter sizing program **Size-IT** (= computer-aided filter sizing)
- Concept creation tool **Optimize-IT** (= computer-aided system optimization)

Example of a filter calculation using sizing software "Size-IT".

Filter calculation according to the expected contamination rate using the concept creation tool "Optimize-IT"

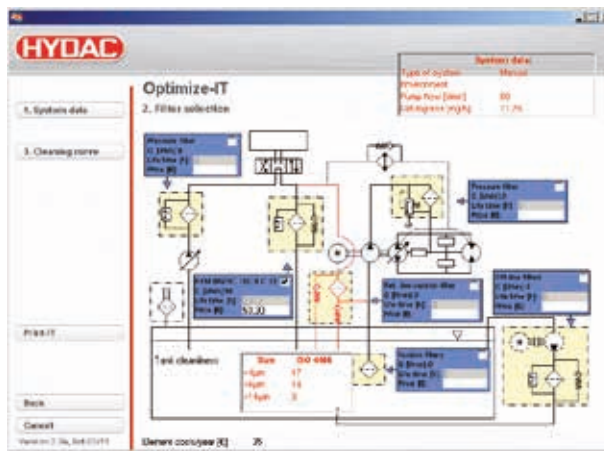

This electronic tool, called **"Optimize-IT"**, is also a component of our electronic product catalogue, but is only available to our filter specialists. Cleanliness classes and achievable service lives for different filter designs can be identified and compared using this tool.

Based on the expected contamination, the optimum filter combination and filter size combination can be determined, right down to a specific calculation of the element costs per year.

Example of concept optimization using the electronic tool "Optimize-IT":

Determining the expected contamination for a particular system

Calculation of the service lives and element costs/year

Cast Design

Innovative Element Technology for installation in HYDAC filters

- Quick Selection -

High Quality Element Technology for Hydraulic Oils and Lubricants

Design

As the core of the filter, it is the filter element which performs the actual filtration and/or dewatering function in the housing. Elements consist of several pleated filtration and support layers which are placed as a cylinder around or inside the stabilizing support tube. These mesh packs are sealed by the end-caps. Depending on the type of filter, flow direction through the filter elements is from the outside to the inside, or from the inside to the outside. Depending on the filter material, the filter mesh pack is encased in an additional outer plastic wrap.

Innovation Stat-Free® technology

With the new Stat-Free® filter elements, HYDAC has for the first time succeeded in combining excellent electrostatic characteristics with filtration performance. Unprecedented low charge generation in the filter element and in the fluid in the system is achieved with a new type of filter element mat and element design.

Innovation HELIOS pleat geometry

Helios doubles the available area for incident flow and its small support pleats prevent collapsing of the filter mesh pack (compression of the pleats) even under high hydraulic loads.

In comparison to a standard pleat design, Helios achieves a significant reduction in flow velocity between the pleats and this is maintained even under the most adverse conditions.

Innovation Outer wrap printed with customer logo

Since the outer wrap can be printed with the customer logo, it acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated condition.

The outer wrap with its multicoloured design and improved diffuser effect ensures optimised flow over the pleat tips.

The tried-and-tested outer wrap which is in highly tear-resistant plastic has elliptical perforations in the Optimicron® element. The shape of these pores (patent pending) improves the angle of incidence onto the filter pleats.

Installation and element versions

- In inline filters to API 614 (element version "A")
- In return line filters/inline filters (element version "R")
- In return line filters to DIN 24550 (element version "RN")
- In inline filters (element version "D")
- In inline filters to DIN 24550 (element version "DN")
- In inline filters, but return line filter element (element version "RD")
- In inline filters MFX (element version "MX")
- In return line suction filters RKM (element version "RK")
- In suction line filters (element version "RS")

Multipass-Filter Efficiency Data to ISO 16889

The contamination retention and particle filtration performance of an element (with the exception of: paper P, P/HC, wire mesh W, W/HC, V and Superabsorber AM) are established in the multipass test to ISO 16889. This procedure with its precisely defined test conditions and a standard test dust (ISO MTD) enables the performance data of different elements to be compared.

Explanation of the Multipass Test

The multipass test is an idealised hydraulic circuit, in which the filter element under test is subjected to a constant flow rate. The size and number of contamination particles are calculated before and after the element. The ratio of the number of particles of a certain size (and larger) before the filter to the number of particles of a certain size after the filtration performance, what is known as the $\beta_{x(c)}$ value. The "x" stands for the particular particle size being considered. A $\beta_{x(c)}$ value of 200 or above is considered (according to DIN 24550) to be absolute filtration. It is important that $\beta_{x(c)}$ values remain at absolute level over a wide differential pressure range and do not fall as the element contamination and operating time increase. The degree of separation is determined from the $\beta_{x(c)}$ value (see illustration).

Performance features

Owing to their high performance standard, HYDAC absolute elements protect the functions of important and expensive hydraulic components and increase their service life.

The most important performance features are:

- High level of particle separation ($\beta_{x(c)}$ values)
- High level of particle separation over a wide differential pressure range (high $\beta_{x(c)}$ value stability)
- High contamination retention capacity
- High burst pressure values
- Low initial pressure difference
- Good flow fatigue strength
- Good water retention capacity (for water-absorbent filter materials)

Dynamic Multipass Test = Hydraulic Load Cycle Test (HLCT)

The new dynamic Multipass Test provides application-orientated characteristics of filtration performance data (field measurements) and relates directly to real work cycles. It is based on different flow profiles for selected HYDAC key applications derived from years of field experience. The Hydraulic Load Cycle Test establishes a direct association of the particular flow profiles to the filter designs and filter media used.

Performance features

- **Flow ripple parameters adjusted to suit the user**
 - Flow rate acceleration
 - Retention times at Q_{min} and Q_{max}
 - Pulsation frequency
- **Test fluid selected according to**
 - oil type for specific application
 - Operating temperature
 - Operating viscosity
- **Test dirt and type of dirt addition selected on basis of following aspects**
 - Both test dirt alternatives (ISO MTD and ISO FTD)
 - Other test dirt varieties with greater practical relevance
 - Both options for dirt addition (discontinuous/continuous)
 - Type of dirt addition adjusted to suit application (e.g. in relation to machine's operating conditions, discontinuous dirt addition for maintenance or oil change)
 - Adjusted upstream dirt concentration
- **Simple presentation of results**
 - β values and β value stability spread out across entire duration of test
 - Cleaning cycles only with specific reference to application
 - Example: filter element 0160 D... e. g. cleaning cycles for different operating conditions (cold start, commissioning system pump, for various load conditions of the filter element)
 - Direct reference to application-specific flow rate

NEW and ESSENTIAL dynamic parameters:

Flow rate acceleration number (VB number) (for each cm^2 filter area)

$$h'_{a(+/-)} = \frac{\left(\frac{dQ}{dt}\right)}{A_{\text{eff}}} = \frac{(Q_2 - Q_1)}{t_2 - t_1} \cdot \frac{1}{A_{\text{eff}}} = \frac{a_Q}{A_{\text{eff}}} \quad \left[\frac{l}{\text{min}^2 \cdot \text{cm}^2} \right]$$

With:

dQ/dt	Flow rate difference between Q_2 and Q_1	[l/min]
$t_2 - t_1$	Time difference between t_1 and t_2	[min]
A_{eff}	Effective filtration area	[cm^2]

Example: Filter element 0160 D...

A large choice of filter elements.

Optimicron® Power

- **Designation:** ON/PO
- **Filter material:** plastic fibre, multi-layer support
- **Filtration rating:** 5, 10, 20 µm
- **Collapse stability:** 10 bar
- **Flow direction:** outside to inside.
- **Plastic shell:** yes
- **Element version:** A, R
- **Element type:** single-use element
- **Brochure no.:** 7.213../..

Optimicron® Pulse

- **Designation:** ON/PS, OH/PS
- **Filter material:** glass fibre, single-layer support
- **Filtration rating:** 3, 5, 10, 20 µm
- **Collapse stability:** 20 / 210 bar
- **Flow direction:** outside to inside.
- **Plastic shell:** yes
- **Element version:** D

HYDAC

FILTERTECHNIK

Innovative
Element Technology

Stat-Free®

1. Introduction

The use of modern environmentally-friendly hydraulic and lubrication oils, together with the trend towards ever more compact systems and finer filtration, has in the past few years exacerbated the problem of electrostatic charge and discharge. As a result, the components integrated into the system become severely restricted in their function or are even damaged. Electrostatic discharges destroy filter elements, damage valves and sensors and can even cause explosions in the hydraulic tank. In addition, they accelerate oil ageing.

To ensure that the whole system operates economically and without risk, it is essential to use filter systems which are capable of absorbing oil ageing products and which can prevent dangerous electrostatic discharges from occurring. Unscheduled and costly oil changes can be avoided by using this system of filters.

We have recognized the long-term problem of electrostatic discharge and with our innovative **Stat-Free® series of elements** have developed an effective solution to the occurrence of charging and discharging in the hydraulic and lube circuit.

With findings drawn from the specifically designed **Electrostatic Test Rig** which has been verified by TÜV as well as numerous field tests, we have been able to create an element technology which inhibits the phenomenon of electrostatic discharge in the filter element as well as significantly reducing the charge in the oil.

In the following pages, the principles and consequences of electrostatic charge and discharge in the hydraulic circuit are examined more closely and the advantages of the new Stat-Free® element technology are demonstrated.

2. The Trend in Hydraulic Fluids

Globalisation of markets compels oil producers worldwide to supply consistently high quality hydraulic and lubrication oils to the manufacturers and operators of systems, such as compressor stations, large transmissions or machines. For category I base oils, where the molecular structure of the crude oil has not been changed, this is not guaranteed. Increasingly, therefore, base oils are used where the molecular structure has been broken down by hydrocracking and then selectively rearranged according to requirement.

Refinery capacities of oil producers all over the world are currently geared to this trend (in Asia and the USA, for example, predominantly category II base oils or higher are produced).

To achieve the oil characteristics guaranteed by the oil producers, additives (usually several, as an additive package) must be added to the base oil. Category I base oils contain aromatics most of which are toxic. In addition the additive packages contain zinc which is a heavy metal, and ash is produced on combustion. They therefore no longer comply with the current international environmental standards.

Hydraulic and lubrication oils in **category II and III** which are produced with appropriate additive packages, contain no toxins or carcinogens, are free of heavy metals and do not produce residues as a result of combustion. However, because they do not contain any metal, these oils have **low electrical conductivity**. When this oil flows through the filters in the hydraulic system, an electrostatic charge is generated. This can result in sparking in the system, which can cause considerable damage to hydraulic components.

Examples of conductivity in oils of different categories

3. Theoretical Principles

3.1 Electrostatic charging of solid particles

Every substance or material has a certain electron work function, i.e. the tendency to accept or release electrons. If two substances which have different electron work functions are then brought together (distance $< 10^{-9}\text{m}$) at the same temperature, then at the point of interface, electrons are transferred from the material with low work function to the material with higher work function. An electrical double layer is produced with a certain charge Q . There does not have to be any friction between the two materials. Friction merely reduces the distance between the substances involved.

Development of the double layer

If the two materials are separated and the distance between them is therefore increased, the capacitance is reduced and the potential difference (= voltage) is increased. Both materials are electrostatically charged.

Separation of the two materials

The amount of charge is dependent on the speed of separation, amongst other things. If separated slowly, charge can be equalized over the last point of contact. The faster the separation occurs, the higher will be the charge.

If the voltage generated exceeds the specific limit of dielectric strength (in air approx. 3 kV/mm), there will be a sudden equalization of voltage which is usually in the form of discharge sparking.

3.2 Charging of fluids

In fluid/solid systems as is the case in hydraulic systems (filter medium/oil) a double charging layer is also formed here at the phase boundary, as shown in the following diagram. Near the boundary, this double layer consists of a linked layer of charge carriers (in this case positively charged). In the oil there is a diffuse layer of opposing (negative) charge carriers.

Distribution of charge in fluid/solid systems

When the fluid then flows, the charge is carried downstream and creates a difference in potential. The faster the fluid is flowing, the higher the potential difference will be. If the voltage exceeds the dielectric strength of the oil, it will discharge in the form of sparking.

Sparking

The precondition for charge generation is that the fluid has a sufficiently low conductivity, otherwise the charges of the diffuse layer can flow back and can be equalized.

3.3 Main factors

The main factors influencing the electrostatic behaviour in hydraulic systems:

- **Electric conductivity**
The lower the conductivity, the higher the charge
- **Filter medium**
Different materials produce different charges depending on the electron work function
- **Temperature**
In general the charge falls as the temperature rises
- **Flow velocity**
The higher the flow velocity, the higher the charge
- **Contamination**
Conductive particles or water increase the conductivity of the fluid which results in a lower charge

4. Consequences of Discharge

The consequences of electrostatic discharges can be serious.

Electrostatic discharging in the filter element

The discharge sparks can burn **holes**, for example, in the filter medium. The following picture shows a hole of about 200 μm in 3 μm filter media. The required oil cleanliness is therefore no longer achievable.

Burn hole in the filter material

Furthermore, when the charge is carried further downstream by the oil, uncontrolled discharges can occur in the hydraulic tank. Depending on the oil/air mixture in the tank, dangerous **explosions** are possible.

Breather filter burned as a result of explosion in the tank

The electrostatic discharges also cause **electromagnetic waves** which disrupt and damage sensitive sensors and electronic components in a hydraulic system.

It is not only hydraulic components but also the hydraulic oil itself which is damaged by discharges. The sparking cracks the molecules of the fluid and free radicals are formed. These radicals polymerize into long chains and this in turn leads to the **formation of varnish**. In addition, the free radicals accelerate oil ageing.

5. Measuring Equipment

5.1 Mobile measuring equipment

In order to examine more closely the electrostatic behaviour of a hydraulic system in the field, we have a range of test equipment.

With the aid of a **portable conductivity measurement instrument** we are able very quickly and simply to determine the electrical conductivity of the hydraulic fluid. It enables us to make an initial assessment as to whether the conductivity has fallen below a critical limit and can lead to electrostatic phenomena.

Furthermore, HYDAC has developed a special voltage sensor, the so-called **StatStick**. In conjunction with our widely-available portable device (HMG 3000) it is possible for our engineers in the field to measure the voltage in the oil directly in the system.

Innovative StatStick with HMG 3000

In the case of discharge sparking in the system, an oscilloscope can also be used as a measurement device. Owing to the high sampling rate of the oscilloscope, the transient discharges are shown as peaks on the display.

5.2 Stationary test rig

Our specially developed **test rig** which has been certified by TÜV is used to simulate real-world critical applications. With the help of the test rig, the electrostatic behaviour of the hydraulic filter in critical oils has been thoroughly analysed.

This has led to the development of the Stat-Free® filter element series which combats the problem of electrostatic discharge.

HYDAC Electrostatic Test Rig

Comparative measurement of a standard element versus a Stat-Free® element on the electrostatic test rig

6. The Stat-Free® Technology

If a hydraulic system is using an oil with a **low conductivity** and a non-conductive filter element, the filter and the fluid can be **charged** electrostatically and can lead to electrostatic **discharges**.

A **purely discharge-capable** design without the addition of a special combination of media, indeed reduces sparking in the element but the oil continues to be charged. The charges at the interface of the filter can dissipate, but the fluid has an even **higher charge** because there is no sparking on the filter to neutralize the charge. The highly charged oil is transported further through the system and uncontrolled discharges are possible in other parts of the system which under certain circumstances can lead to serious damage (e.g. explosion in the tank).

Using a new type of filtration meshpack and element design, HYDAC has for the first time combined excellent electrostatic characteristics and filtration performance. Our Stat-Free® elements have achieved a previously **all-time low charge** of the filter element and the fluid during system operation. In addition the Stat-Free® elements are equipped with conductive O-ring caps and conductive core tubes.

The performance of Stat-Free® elements has been confirmed in thorough laboratory and field tests. By comparing the test diagram below, the Stat-Free® elements have a striking advantage over the conventionally designed standard elements, in terms of the oil charge generated.

Comparison of the electrostatic charge (volt)

The new Stat-Free® technology is available for the following HYDAC element materials:

- **Mobilemicron (MM)**
for filtration ratings 8, 10, 15 µm
- **Optimicron® (ON)**
for filtration ratings 1, 3, 5, 10, 15, 20 µm,
Optimicron® Pulp & Paper (ON/PP)
for filtration rating 5 µm and
Betamicron® (BN4HC, BH4HC)
for filtration ratings 3, 5, 10, 20 µm
In this case, please add **/-SFREE** to the element model code.
Example: 2600 R 010 ON /-SFREE
- **Optimicron® Power (ON/PO)**
for filtration ratings 5, 10, 20 µm and
Optimicron® Pulse (ON/PS, OH/PS)
for filtration ratings 3, 5, 10, 20 µm with SFREE inclusive

Stat-Free® elements are particularly suitable for applications in power plants, gas turbines, plastic injection moulding machines and calenders (paper industry) and in mobile hydraulics, as well as any other hydraulic and lubrication system which uses new low conductivity oils.

They guarantee a **high level of operating reliability**, since they prevent sparks, deflagration and sludge formation in the oil. **Longer oil change intervals** can be achieved through non-damaging filtration of the oil.

7. Real-World Example and Reference

HYDAC became aware of the possibility of explosions in the hydraulic tank of a large hydraulic system after breather filters were burned out. The filters concerned were competitor's filters which were not optimized for electrostatic charging. Measurements made on site using the StatStick revealed voltage peaks of **up to 17,000 Volt** and dangerous discharge sparks in the tank. Once retro-fitted with Stat-Free® elements, **no further discharges** could be detected and the voltage was just **2-3 Volt**.

Voltage measurement using StatStick
(above: competitor's standard element voltage peaks up to 17kV [scaling: 5kV]; below: Hydac Stat-Free® element 2-3V [scaling: 5V])

A number of established companies in sectors such as turbine lubrication, presses, plastic injection moulding machines and mobile hydraulics have already named HYDAC as a reference with regard to finding a solution to the problem of electrostatic discharge, as indicated by the following quotation:

"Due to numerous, frequently recurring difficulties on actual systems, we urgently recommend using filter cartridges which inhibit electrostatic charging in oils with low electrical conductivity. These filters are available from HYDAC under the same model code, by adding "/-SFREE"."

Moreover, the functionality of the Stat-Free® filter elements has been analysed by DEKRA EXAM GmbH, the German specialist unit for explosion protection at the mining test facility (BVS). The efficiency of the elements was confirmed in the expert report 13EXAM 10666 BVS-BI by DEKRA EXAM GmbH, Explosion Protection Department.

8. Summary

- The charge separation in **low conductivity oils** results in electrostatic charging and discharging.
- Electrostatic discharges can cause the following damage, amongst others:
 - Explosions in the hydraulic tank
 - Accelerated oil ageing
 - Damage to the filter element
 - Destruction of electronic components
 - Damage to cooler units
- A conductive design of filter element is **not** sufficient to reduce oil charging.
- HYDAC **Stat-Free® elements** ensure a very low charge in the filter element and the hydraulic fluid

Advantages:

- **High level of operating reliability**
because discharge sparking, deflagration and sludge formation in the oil is eliminated
- **Longer oil change intervals**
because filtration of the oil is non-damaging

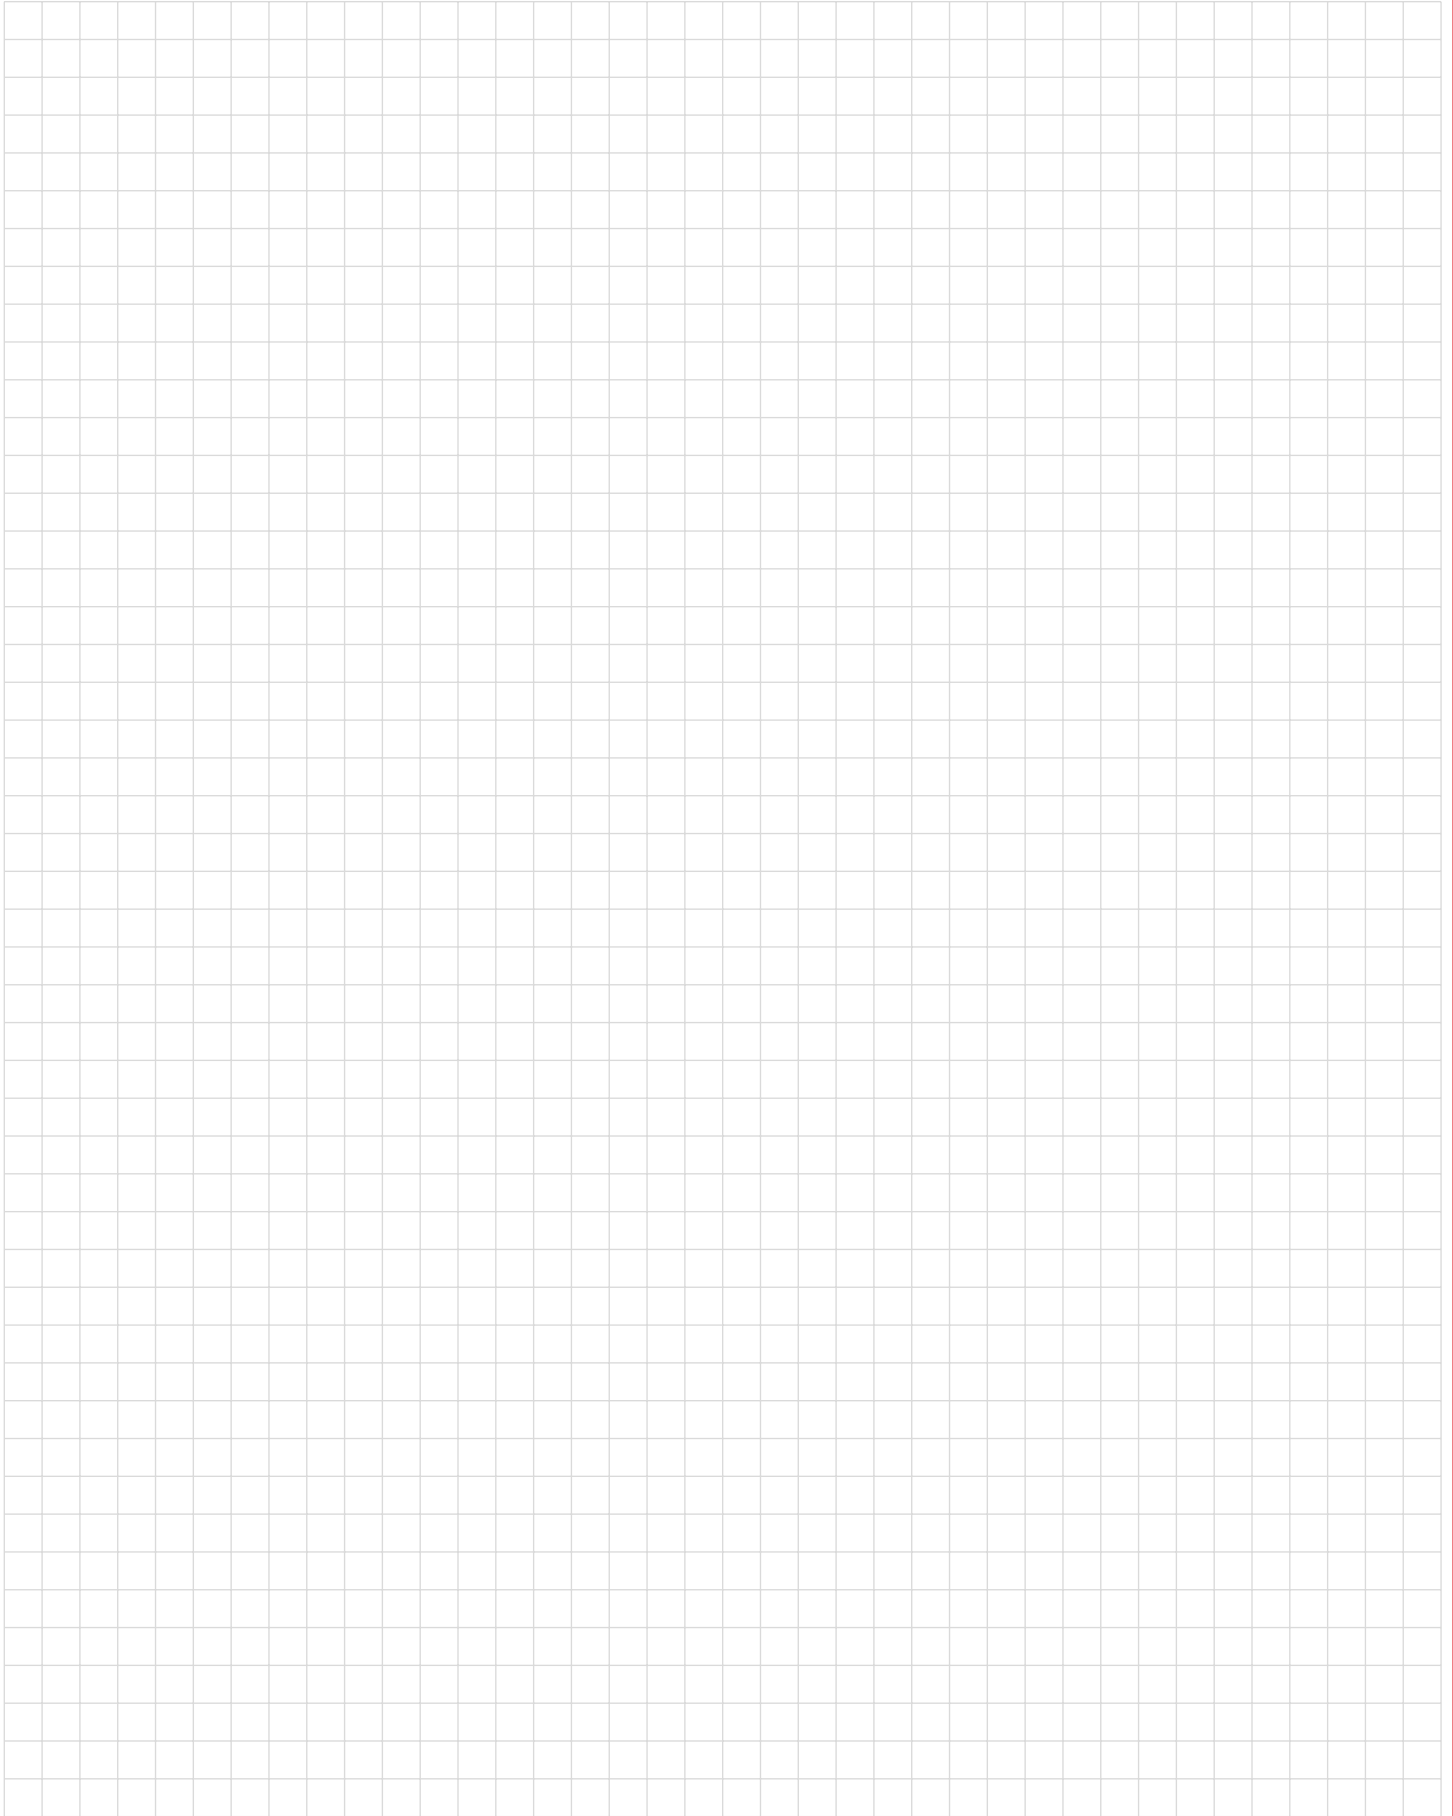

Conclusion:

These developments prove that at HYDAC we will always find a solution to a customer problem. We not only provide an efficient result, but we will see you through the whole diagnostic process, especially in challenging cases.

We look forward to hearing about your new projects!

**Energy efficient
filtration.
Our contribution
to sustainability.**

Optimicon® Innovative Filter Element Technology for Sustainable Filtration

HYDAC Optimicon® has a wealth of innovations and optimised features.

HYDAC Optimicon® at a glance:

- Unique HELIOS pleat geometry
- Innovative, integrated drainage layer*
- New, upstream drainage layer*
- Efficient filter materials
- Expansion of the range of filtration ratings
- Optimised filter element wrap

Optimicon® will save you up to 30 % in differential pressure. This not only protects your pocket, but also the environment.

*) Designed for specific applications

Optimicon® Innovative Filter Element Technology for Sustainable Filtration

Resources are increasingly scarce, energy prices are rising and the environment is suffering. Energy efficiency is the key to counteracting this trend and to saving both costs and valuable resources.

■ HYDAC Optimicon® shows the way!

These innovative filter elements can make substantial savings on energy and costs for machine and system operators. The savings apply over the entire service life and the elements offer superior performance at the same time. The high energy efficiency of the new filter elements therefore reduces CO₂ emissions.

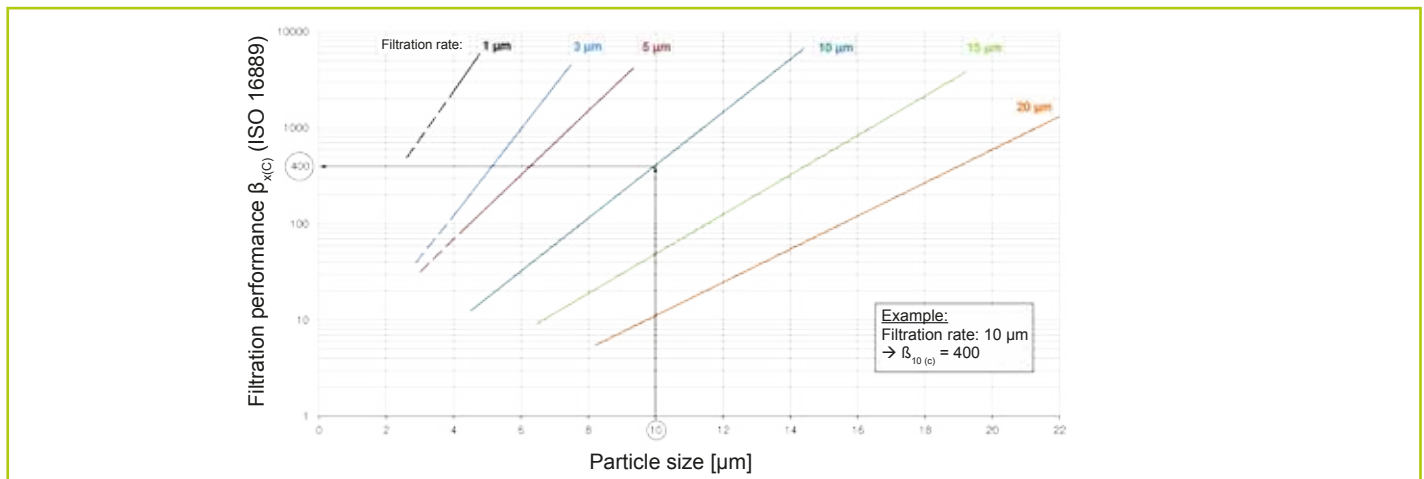

■ Our contribution to sustainability!

Performance data

Energy and cost savings over the entire service life with superior performance at the same time.

Optimised filter element wrap

Innovative wrap offers a high degree of tear-resistance and identifies the element as being original equipment.

The new perforations ensure optimised flow onto the filter pleats and thus minimise pressure losses effectively.

The optimised perforations have the effect of distributing the stress evenly in the axial and radial directions and thus increase tear-resistance.

Customised multicoloured brand labelling provides protection from product piracy.

Innovative HELIOS pleat geometry

The special form of the pleats is like the crown of HELIOS, god of the sun.

The innovative HELIOS pleat geometry consists of alternating high and low pleats.

The special geometry significantly increases the area open to the flow and calms the flow in the area between the pleats, reducing the differential pressure.

Particularly under high dynamic load conditions, the special geometry prevents the pleats becoming compressed and this reduces the differential pressure.

**Up to seven
filtration layers**

Free flow of fluid with very low differential pressure and high contamination retention.

Optimised element drainage

The unique asymmetrical structure provides large flow cross-sections, effectively preventing dead-spaces, turbulence and pressure losses

Upstream protective layer:

The homogenous and robust non-woven material protects the sensitive microglass media from mechanical damage.

Pre and main filter:

The graduated structure of the filter media ensures efficient particle retention together with a high level of contamination capacity and a long element service life.

Downstream protective layer:

The pressure-resistant protection and support layer offers optimum support for the pre- and main-filter media even under high differential pressure conditions.

Integrated drainage layer

The integrated drainage layer directs the flow of fluid freely to the clean side and results in very low element differential pressures.

High quality wire mesh:

The stainless steel mesh ensures high stability of the filter pleats and has excellent fluid compatibility.

Protects the environment and your pocket

HYDAC Optimicon® makes high energy savings possible over the whole service life of the filter element. This protects valuable resources and reduces the CO₂ emissions.

Our contribution to sustainability.

Energy efficient innovations are the main focus of our developments, so that systems operate more economically.

Optimicon® Power

Optimised filter elements for applications in power stations and rotary presses using Stat-Free® technology

Optimicon® Pulse

Optimised filter elements for applications with powerful pulsations using Stat-Free® technology

Optimicon® Pulp & Paper

Optimised filter elements for use in paper mills

For your application

Optimised filter elements for your application.

Optimicron® Power Filter Elements ON/PO

for power plant applications
up to 10 bar, filtration rating 5, 10 and 20 µm

1. OPTIMICRON® POWER-ELEMENT

1.1 DESCRIPTION

The new filter elements in the Optimicron® Power series demonstrate impressive levels of robustness, safety and a particularly low pressure drop. They are compact in design and enable homogeneous flow of the fluid thanks to the innovative filter mesh pack structure.

Optimicron® Power elements have been designed to meet the requirements of the API 614 Standard.

The Stat-Free® technology incorporated into Optimicron® Power elements also ensures an increased level of operational safety by preventing electrostatic charging on the filter element. As a result, the service life of the oil is also considerably increased.

1.2 STAT-FREE® TECHNOLOGY INCLUDED

As standard, Optimicron® Power elements are equipped with the tried-and-tested Stat-Free® technology (to prevent electrostatic charging in the system).

As a result of increasing environmental awareness worldwide, operators are to a greater extent using zinc-free and ashless oils, such as bio oils which have very low conductivity. In these oils, electrostatic discharges are a common occurrence in the form of sparking, for example on the filter element or in the tank. Depending on the gas composition in and around the tank, sparking can cause deflagrations or explosions. Furthermore, the discharges can cause a chemical reaction in the oil, giving rise to oil ageing products.

1.3 GENERAL DATA

Collapse stability	10 bar for return line filter elements
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	5, 10, 20 µm
Bypass cracking pressure	Return line filter element ("R"): standard 3 bar Return line filter element for API applications ("A"): Without bypass valve as standard (others on request)
Category of filter element	Single use element

Oil ageing products can be deposited in the system and can clog up expensive system components. In addition, the filtration efficiency of the filter elements is impaired by sparking due to the holes burned in the filter mesh pack which in turn can lead to reduced retention of system contamination.

The Stat-Free® technology incorporated into Optimicron® Power elements slows down the oil ageing described above because the special filter mesh pack design prevents electrical charging in the system. This means that the service life of both the oil and the components can be extended. The Stat-Free® technology prevents the phenomenon of electrostatic charging and therefore the sparking in the system. It can be used in every conceivable application, irrespective of oil type.

1.4 INNOVATIVE OUTER WRAP WITH IMPROVED DIFFUSER EFFECT FOR PRINTING WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated condition.

1.5 COMPATIBILITY WITH HYDRAULIC FLUIDS TO ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD RETURN LINE FILTER ELEMENTS

(Can be used in the following filters: RFL, RFLD)

	0660	R	010	ON/PO	/-KB
Size	0110, 0240, 0330, 0500, 0660, 0850, 0950, 1300, 1700, 2600, 2700				
Type	R Return line filter element				
Filtration rating in μm	005, 010, 020				
Filter material of element	ON/PO Optimicron® Power, collapse stability up to 10 bar				
Supplementary details	V FPM (Viton) seal KB without bypass valve				

2.2 MODEL CODE FOR RETURN LINE FILTER ELEMENTS IN AFLD AND ALFS FILTERS

	0880	A	010	ON/PO	/-V
Size	0110, 0120, 0230, 0240, 0330, 0500, 0540, 0880, 1400, 2700				
Type	A Filter elements to API standards				
Filtration rating in μm	010				
Filter material of element	ON/PO Optimicron® Power, collapse stability up to 10 bar				
Supplementary details	V FPM (Viton) seal				

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = see housing curve in the relevant filter brochure

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 4.1)

NOTE

The information in this brochure relates to the operating conditions and applications described.

For applications or operating conditions not described, please contact the relevant technical department.

Subject to technical modifications.

4. ELEMENT CHARACTERISTICS

4.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Optimicron® Pulse Filter Elements ON/PS / OH/PS

for applications with strong pulsations
up to 210 bar, filtration rating 3, 5, 10 and 20 µm

1. OPTIMICRON® PULSE ELEMENT

1.1 DESCRIPTION

The new application-specific filter elements in the Optimicron® Pulse series are notable for their special fatigue strength in applications which are subject to extreme pulsations.

Pressure fluctuations in hydraulic systems can occur, for example, when cylinder pistons move or accumulators are charged. The frequency of pressure fluctuations varies considerably depending on the application. On injection moulding machines, the movement of the clamping unit causes large pressure fluctuations, often with an extremely high cycle rate. The new HYDAC Optimicron® Pulse filter element can withstand these dynamic stresses. Special flexible materials in the filter mesh pack provide the filter element with a high fatigue strength. Fatigue fractures in the filter mesh pack and penetration of contamination to the clean side are therefore prevented.

The innovative HELIOS pleat geometry ensures a free cross-sectional area even at high flow rates and as a result delivers a lower differential pressure.

Additionally, the Optimicron® Pulse filter element is fitted with the tried and tested Stat-Free® technology, which effectively prevents electrostatic discharges in the hydraulic system.

1.2 GENERAL DATA

Collapse stability	ON/PS: 20 bar OH/PS: 210 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	3, 5, 10, 20 µm
Bypass cracking pressure	Pressure filter element ("D"): Without bypass valve as standard (bypass valve on request)
Category of filter element	Single use element

1.3 STAT-FREE TECHNOLOGY INCLUDED

As standard, Optimicron® Pulse elements are equipped with the tried-and-tested Stat-Free® technology (to prevent electrostatic charging in the system).

As a result of increasing environmental awareness worldwide, operators are to a greater extent using zinc-free and ashless oils, such as bio oils which have very low conductivity. In these oils, electrostatic discharges are a common occurrence in the form of sparking, for example on the filter element or in the tank. Depending on the gas composition in and around the tank, sparking can cause deflagrations or explosions. Oil ageing products can be deposited in the system and can clog up expensive system components. In addition, the filtration efficiency of the filter elements is impaired by sparking due to the holes burned in the filter mesh pack which in turn can lead to reduced retention of system contamination.

The Stat-Free® technology incorporated into Optimicron® Pulse elements slows down the oil ageing described above because the special filter mesh pack design prevents electrical charging in the system. This means that the service life of both the oil and the components can be extended. The Stat-Free® technology prevents the phenomenon of electrostatic charging and therefore the sparking in the system. It can be used in every conceivable application, irrespective of oil type.

1.4 INNOVATIVE OUTER WRAP WITH INCREASED ROBUSTNESS AND IMPROVED DIFFUSER EFFECT FOR PRINTING WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated condition.

Optimicron® Pulp & Paper Filter Elements ON/PP

for use in paper mills
up to 10 bar, filtration rating 5 µm

1. OPTIMICRON® PULP & PAPER ELEMENT

1.1 DESCRIPTION

Drawing on HYDAC's many years of experience in the paper and pulp industry our new Optimicron® Pulp & Paper series elements have been specially developed for use in paper mills. Typically they are used in classic lubrication applications such as the dry and wet end, in the calender and in the cooling oil filtration circuit of the press section.

Thanks to innovative characteristics such as the HELIOS pleat geometry and the optimised micro-glass media, the new industry-specific filter elements satisfy the typical requirements demanded of a filter element in such applications.

1.2 GENERAL DATA

Collapse stability	10 bar for return line filter elements
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	5 µm
Bypass cracking pressure	Return line filter element ("R"): standard 3 bar (others on request)
Category of filter element	Single use element

1.3 STAT-FREE® ELEMENT TECHNOLOGY OPTIONAL

By completely revising the materials used, e.g. through the use of conductive plastics, fully discharge-capable filter elements are the result. Electrical charging of the filter elements during operation has therefore been reduced to a negligible level. The risks of sudden sparking and the subsequent formation of soot or sludge in the oil are therefore reliably eliminated.

With the new Stat-Free® filter elements, HYDAC has for the first time succeeded in combining excellent electrostatic characteristics with filtration performance. Unprecedented low charge generation in the filter element and in the system fluid is achieved with a new type of filter mesh pack and element design.

1.4 INNOVATIVE OUTER WRAP WITH IMPROVED DIFFUSER EFFECT FOR PRINTING WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated condition.

1.5 COMPATIBILITY WITH HYDRAULIC FLUIDS TO ISO 2943

Optimicron® Filter Elements ON

up to 20 bar,
filtration rating 1, 3, 5, 10, 15 and 20 µm

Please note:
Ongoing conversion from Betamicron® (BN4HC) to Optimicron® (ON)!

1. OPTIMICRON®

1.1 DESCRIPTION

The new Optimicron® filter elements have been optimised in respect of filtration performance and energy efficiency. They offer the best combination when it comes to separation efficiency, service life and differential pressure.

As a complete package the innovative characteristics of the new technology have a very positive impact on the differential pressure of the elements. For example, the new HELIOS filter mesh pack geometry has the effect of stabilising the pleats and increasing the available area of incident flow.

The obvious advantage is improved flow conditions and as a result lower differential pressure.

The efficient micro-glass media forming the core of the filter element delivers first class filtration efficiency and a low differential pressure over the whole lifetime of the element and is now also available in 1 and 15 µm ratings.

The new design of the filter mesh pack and the combination of (up to seven) exclusive filtration layers has a particularly favourable effect on the differential pressure. So for example, a drainage layer with asymmetrical thread thickness as the first layer on the contaminated side channels the fluid and at the same time provides extensive and soft support of the other media. The penultimate filter layer, the so-called integrated drainage layer, ensures directed flow and prevents impact losses, dead spaces and turbulence which usually occur when wire mesh is used exclusively.

1.2 GENERAL DATA

Collapse stability	20 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	1, 3, 5, 10, 15, 20 µm

- Fire-resistant fluids HFA, HFB, HFC and HFD

- Operating fluids with high water content (>50% water content) on request

1.5 INNOVATIVE OUTER WRAP WITH IMPROVED DIFFUSER EFFECT FOR PRINTING WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated condition.

1. APPLICATION

Optimicron® filter elements are intended to be used in all industries where particular importance is placed on first class filtration efficiency, high cleanliness classes as well as on significant savings in energy costs and on sustainable filtration.

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD PRESSURE FILTER ELEMENTS

(Can be used in the following filters: LFM, MFM, MFM.../OIU, MFM..L., DFM, HFM, LPF, LF, LFF, MDF, HDF, HDFF, DF, DFF, DFFX, FLND, FMND, DFDK, DF...MHA, DF...MHE, DF...M A, DF...M P, DFZ, DF...Q E, DFP, DFPF)

Size	0030, 0035, 0055, 0060, 0075, 0095, 0110, 0140, 0160, 0240, 0260, 0280, 0300, 0330, 0450, 0500, 0650, 0660, 0900, 0990, 1320, 1500				
Type	D Pressure filter element				
Filtration rating in µm	001, 003, 005, 010, 015, 020				
Filter material of element	ON Collapse stability up to 20 bar				
Supplementary details	V FPM (Viton) seal SFREE Stat-Free® element technology				

2.2 MODEL CODE FOR STANDARD RETURN LINE FILTER ELEMENTS

(Can be used in the following filters: RFM, RF, RFD, RFL, RFLD, NF, NFD)

	0660	R	010	ON	/-V
Size	0030, 0060, 0075, 0090, 0110, 0150, 0160, 0165, 0185, 0195, 0210, 0240, 0260, 0270, 0280, 0330, 0450, 0500, 0580, 0600, 0660, 0750, 0850, 0950, 1300, 1700, 2600				
Type	R Return line filter element				
Filtration rating in µm	001, 003, 005, 010, 015, 020				
Filter material of element	ON Collapse stability up to 20 bar				
Supplementary details	V FPM (Viton) seal KB without bypass valve SFREE Stat-Free® element technology				

2.3 MODEL CODE FOR RETURN LINE FILTER ELEMENTS IN PRESSURE FILTERS

(Can be used in the following filters: LPF.../-TH, LPF...GGA)

	0241	RD	010	ON	/-V
Size	0161, 0241, 0261, 0281				
Type	RD Return line filter element for pressure filters				
Filtration rating in µm	001, 003, 005, 010, 015, 020				
Filter material of element	ON Collapse stability up to 20 bar				
Supplementary details	V FPM (Viton) seal				

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = see housing curve in the relevant filter brochure

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 4.1)

4. ELEMENT CHARACTERISTICS

4.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Betamicron® Filter Elements BN4HC/BH4HC

up to 210 bar, filtration rating 3, 5, 6, 10, 20, 25 µm

1. BETAMICRON® ELEMENT

1.1 DESCRIPTION

The 3-stage structure of Betamicron® filter elements ensures the maximum contamination retention and filtration performance. An additional drainage layer directs the fluid flow with optimal efficiency, achieving particularly favourable $\Delta p/Q$ characteristics.

An innovative bonding process used for the longitudinal seam guarantees that the cut ends of the mesh pack remain completely sealed even under high load variations. This eliminates the possibility of particles crossing from the contaminated to the clean side.

To prevent the formation of zinc soap, which occurs mainly in conjunction with water-based fluids (HFA / HFC) and bio oils, no components containing zinc are utilized.

The metal tube which forms a stable core inside the element is constructed as a spiral lock seam tube. This provides consistent stability and a significant reduction in element weight. The pleated filter mesh pack is encased in a stable outer wrap. This wrap distributes the incoming fluid evenly over the mesh pack. In addition the mesh pack is not directly exposed to the flow, and this protects it from pulsating flows. In this way, the element achieves extremely high fatigue strength values. Moreover, the mesh pack is protected from mechanical damage.

1.2 GENERAL DATA

Collapse stability	BN4HC: 20 bar BH4HC: 210 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	3, 5, 6, 10, 20, 25 µm
Bypass cracking pressure	Pressure filter element (" D "): Without bypass valve as standard Pressure filter element to DIN 24550 (" DN "): Without bypass valve as standard Pressure filter element for MFX filter (" MX "): standard 3.5 bar Return line filter element to DIN 24550 (" RN "): standard 3.5 bar (others on request)
Category of filter element	Single use element

1.3 STAT-FREE® TECHNOLOGY OPTIONAL

By completely revising the materials used, e.g. through the use of conductive plastics, fully discharge-capable filter elements are the result. Electrical charging of the filter elements during operation has therefore been reduced to a negligible level. The risks of sudden sparking and the subsequent formation of soot or sludge in the oil are therefore reliably eliminated.

With the new Stat-Free® filter elements, HYDAC has for the first time succeeded in combining excellent electrostatic characteristics with filtration performance. Unprecedented low charge generation in the filter element and in the system fluid is achieved with a new type of filter mesh pack and element design.

1.4 OUTER WRAP PRINTED WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated condition.

1.5 COMPATIBILITY WITH HYDRAULIC FLUIDS TO ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD PRESSURE FILTER ELEMENTS

Mobilemicron® Filter Elements MM

up to 10 bar, filtration rating 8, 10, 15 µm

1. MOBILEMICRON® ELEMENT

1.1 DESCRIPTION

The use of Mobilemicron® element technology guarantees safe, reliable operation of your mobile machine.

The Mobilemicron® series of filter elements is characterized by an especially low pressure drop which makes them particularly suitable for use wherever high-viscosity oil is likely - especially at low temperatures during a cold start. When Mobilemicron® elements are used, compared to conventional hydraulic elements under the same ambient conditions, the Δp produced is lower and the flow rate is higher which results in a lower energy requirement.

Filtered flow during cold start

Thanks to its excellent cold start behaviour the Mobilemicron® element technology is used primarily in mobile applications but is also typically recommended for gear lubrication applications in systems with high temperature fluctuations and high-viscosity oils (>ISO VG 100).

1.2 GENERAL DATA

Collapse stability	10 bar for return line filter elements 20 bar for pressure filter elements
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	8, 10, 15 µm
Bypass cracking pressure	Return line filter element ("R"): standard 3 bar Pressure filter element for MFX filter ("MX"): standard 3.5 bar Return line filter element for RKM filter ("RK"): standard without bypass valve Return line filter element pressure filter ("RD"): standard without bypass valve (others on request)
Category of filter element	Single use element

1.3 STAT-FREE® ELEMENT TECHNOLOGY OPTIONAL

By completely revising the materials used, e.g. through the use of conductive plastics, fully discharge-capable filter elements are the result. Electrical charging of the filter elements during operation has therefore been reduced to a negligible level. The risks of sudden sparking and the subsequent formation of soot or sludge in the oil are therefore reliably eliminated.

With the new Stat-Free® filter elements, HYDAC has for the first time succeeded in combining excellent electrostatic characteristics with filtration performance. Unprecedented low charge generation in the filter element and in the system fluid is achieved with a new type of filter mesh pack and element design.

1.4 OUTER WRAP PRINTED WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated condition.

1.5 COMPATIBILITY WITH HYDRAULIC FLUIDS TO ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD RETURN LINE FILTER ELEMENTS

(Can be used in the following filters: RF, RFD, RFM, RFL, RFLD)

	0660	R	010	MM	/-V
Size	0075, 0090, 0150, 0165, 0185, 0195, 0210, 0270, 0330, 0500, 0660, 0850				
Type	R Return line filter element				
Filtration rating in μm	008, 010, 015				
Filter material of element	MM Mobilemicron [®] , collapse stability up to 10 bar				
Supplementary details	V FPM (Viton) seal KB without bypass valve SFREE Stat-Free [®] element technology				

2.2 MODEL CODE FOR RETURN LINE FILTER ELEMENTS IN RKM FILTERS

	0300	RK	010	MM	/-V
Size	0080, 0100, 0120, 0151, 0201, 0251, 0300, 0350, 0400, 0800				
Type	RK Return line filter element for RKM filter				
Filtration rating in μm	008, 010, 015				
Filter material of element	MM Mobilemicron [®] , collapse stability up to 10 bar				
Supplementary details	V FPM (Viton) seal SFREE Stat-Free [®] element technology				

2.3 MODEL CODE FOR RD PRESSURE FILTER ELEMENTS

(Can be used in the following filters: LPF.../-TH, LPF...GGA)

	0251	RD	010	MM	/-V
Size	0161, 0241, 0261, 0281				
Type	RD Pressure filter element				
Filtration rating in μm	008, 010, 015				
Filter material of element	MM Mobilemicron [®] , collapse stability up to 20 bar				
Supplementary details	V FPM (Viton) seal SFREE Stat-Free [®] element technology				

2.4 MODEL CODE FOR PRESSURE FILTER ELEMENTS IN MFX FILTERS

Size 0100, 0200	0100	MX	010	MM	/-V
Type MX Pressure filter element for MFX filter					
Filtration rating in µm 008, 010, 015					
Filter material of element MM Mobilemicron®, collapse stability up to 20 bar					
Supplementary details V FPM (Viton) seal KB without bypass valve SFREE Stat-Free® element technology					

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = see housing curve in the relevant filter brochure

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 4.1)

4. ELEMENT CHARACTERISTICS

4.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Ecomicron® Filter Elements ECON2

up to 10 bar, filtration rating 3, 5, 10, 20 µm

1. ECOMICRON® ELEMENT

1.1 DESCRIPTION

With the introduction of the new Betamicron® element technology HYDAC has broken new ground in the field of filter technology: with its markedly improved filtration performance the new glass fibre technology delivers a significant reduction in operating costs of both machine and system.

In the second step we were able to incorporate the outstanding values of the new Betamicron®4 technology into the environmentally friendly all-plastic variant Ecomicron®. The result was the new filter element generation Ecomicron®2 with tried-and-tested full-plastic structure and improved performance data.

The typical HYDAC element construction has been retained: the unique outer wrap ensures optimum flow control and protects the high-grade filter medium; the pleated filter mesh pack stabilises the filter element for flow from outside to inside and makes maximum use of the glass fibre capacity.

1.2 GENERAL DATA

Collapse stability	10 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	3, 5, 10, 20 µm
Bypass cracking pressure	Return line filter element ("R"): standard 3 bar Pressure filter element for MFX filter ("MX"): standard 3.5 bar (others on request)
Category of filter element	Single use element

1.3 OUTER WRAP PRINTED WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly

legible even in the contaminated condition.

1.4 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD RETURN LINE FILTER ELEMENTS

(Can be used in the following filters: RFM, NF, NFD)

Wire Mesh Filter Elements W, W/HC

up to 20 bar, filtration rating 25, 50, 100, 200 µm

1. WIRE MESH ELEMENT

1.1 DESCRIPTION

Stainless steel wire mesh filter elements are used in lubrication systems for bearings (e.g. turbine bearings), water filtration, treatment plants for cooling emulsions and as guard filters.

On the W and W/HC filter elements both the warp and weft are equally strong which results in uniform openings in the filter mesh. The pressure drop is lower when filtering with stainless steel wire mesh filter elements. The pleated stainless steel square mesh is supported in single or multiple layers.

Compared to W/HC elements, W elements have a smaller pleat depth.

The W and W/HC stainless steel wire mesh elements are used in our return line and pressure filters.

Dutch weave

HYDAC offers another wire mesh filter element, the Dutch weave filter element "T". This element is primarily used as a protective filter in mining applications.

On Dutch weaves the warp thread is stronger than the weft thread. The weft wires are laid together as closely as possible and this results in a moderate pressure drop during filtration.

The so-called zero-mesh weaves are only used in pressure filters (Example for order code: 0330 D 050 T).

1.2 GENERAL DATA

Collapse stability	20 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	25, 50, 100, 200 µm (others on request)
Bypass cracking pressure	Pressure filter element ("D"): Without bypass valve as standard Pressure filter element to DIN 24550 ("DN"): Without bypass valve as standard Return line filter element ("R"): standard 3 bar (others on request)
Category of filter element	Can be cleaned to extend service life

1.3 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG can only be used with Viton seals
- Fire-resistant fluids HFA, HFB, HFC and HFD as well as operating fluids with a high water content on request

1.4 CLEANING

Stainless steel wire mesh elements can be cleaned after use. However only a certain level (percentage) of cleaning is achievable.

In order to achieve the best possible result, the elements should be cleaned using specialist equipment.

The cleaning effect cannot however be predicted. It depends greatly on various conditions

- Filtration rating:
The finer the filter material, the worse the cleaning level
- Operating pressure:
The higher the operating pressure, the more firmly the contamination particles become embedded in the filter material
- Type of particle:
For example, if the contamination consists mainly of fibres, the level of cleaning is worse than if it consists of cube-type particles.

In addition it must be noted that with each cleaning process, it is only possible to restore approx. 80-90% of the initial filter area each time, i.e. after 4-5 cleaning cycles, the result might not make economic sense (cleaning costs versus service life).

Further information on cleaning is provided in the operating manual which is available on request.

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD PRESSURE FILTER ELEMENTS

(Can be used in the following filters: LPF, LF, LFF, MDF, DF, DFF, DFFX, DFDK)

	0660	D	025	W/HC	/-V
Size					
W:	0030, 0060, 0110, 0140, 0160, 0240, 0280, 0330, 0500, 0660, 0990, 1320, 1500				
W/HC:	0060, 0110, 0140, 0160, 0240, 0260, 0280, 0330, 0500, 0660, 0990, 1320				
Type					
D	Pressure filter element				
Filtration rating in μm	025, 050, 100, 200				
Filter material of element	W, W/HC				
Supplementary details					
V	FPM (Viton) seal				
W	suitable for oil-water emulsions (HFA, HFC)				

2.2 MODEL CODE FOR PRESSURE FILTER ELEMENTS TO DIN 24550

(Can be used in the following filters: FLN, LFN, LFNF, DFN, DFNF, FLND, FMND)

	0100	DN	025	W/HC	/-V
Size					
W:	0040, 0063, 0100 (only for FLND and FMND)				
W/HC:	0040, 0063, 0100, 0160, 0250, 0400				
Type					
DN	Pressure filter element to DIN 24550				
Filtration rating in μm	025, 050, 100, 200				
Filter material of element	W, W/HC				
Supplementary details					
V	FPM (Viton) seal				
W	suitable for oil-water emulsions (HFA, HFC)				

2.3 MODEL CODE FOR STANDARD RETURN LINE FILTER ELEMENTS

(Can be used in the following filters: RFM, RF, RFD, RFL, RFLD, NF, NFD)

	0660	R	010	W/HC	/-V
Size					
	0030, 0060, 0075, 0090, 0110, 0150, 0160, 0165, 0185, 0195, 0210, 0240, 0270, 0280, 0330, 0450, 0500, 0580, 0660, 0750, 0850, 0950, 1300, 1700, 2600, 2700				
Type					
R	Return line filter element				
Filtration rating in μm	025, 050, 100, 200				
Filter material of element	W/HC Collapse stability up to 20 bar				
Supplementary details					
KB	without bypass valve				
V	FKM (Viton) seal				
W	suitable for oil-water emulsions (HFA, HFC)				

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = see housing curve in the relevant filter brochure

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 4.1)

4. ELEMENT CHARACTERISTICS

4.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Metal Fibre Filter Elements V

up to 210 bar, filtration rating 3, 5, 10, 20 µm

1. METAL FIBRE ELEMENT

1.1 DESCRIPTION

Metal fibre filter elements are used primarily as protective filters in highly dynamic applications.

The filter element is constructed from randomly laid stainless steel wires. This stainless steel wire meshpack which is pleated, produces a low pressure drop and is suitable for all operating fluids.

The "V" metal fibre elements are used in our return line and pressure filters.

Additional metal fibre version "VB"

An additional metal fibre filter element offered by HYDAC is the "VB" element. This element is used primarily in test rig systems for test cycles where temperatures exceed 100°C and as working filters in highly dynamic applications. VB filter elements are used mainly in HYDAC pressure filters. (Order code example: 0110 D 005 VB).

1.3 GENERAL DATA

Collapse stability	210 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	3, 5, 10, 20 µm (others on request)
Bypass cracking pressure	Pressure filter element ("D"): Without bypass valve as standard Return line filter element ("R"): standard 3 bar (others on request)
Category of filter element	Can be cleaned to extend service life

1.3 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.4 CLEANING

Stainless steel wire mesh elements can be cleaned after use. However only a certain level (percentage) of cleaning is achievable.

In order to achieve the best possible result, the elements should be cleaned using specialist equipment.

The cleaning effect cannot however be predicted. It depends greatly on various conditions

- Filtration rating:
The finer the filter material, the worse the cleaning level
- Operating pressure:
The higher the operating pressure, the more firmly the contamination particles become embedded in the filter material
- Type of particle:
For example, if the contamination consists mainly of fibres, the level of cleaning is worse than if it consists of cube-type particles.

In addition it must be noted that with each cleaning process, it is only possible to restore approx. 80-90% of the initial filter area each time, i.e. after 4-5 cleaning cycles, the result might not make economic sense (cleaning costs versus service life).

Further information on cleaning is provided in the operating manual which is available on request.

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD PRESSURE FILTER ELEMENTS

(Can be used in the following filters: LF, LFF, MDF, DF, DFF, DFFX, DFDK, DF...M P, DF...M A, DF...Q E, DF...MHA, DF...MHE, DFZ, DFP, DFPF)

	0660	D	010	V	/-V
Size	0030, 0060, 0110, 0140, 0160, 0240, 0280, 0330, 0500, 0660, 0990, 1320, 1500				
Type	D Pressure filter element				
Filtration rating in µm	003, 005, 010, 020				
Filter material of element	V				
Supplementary details	V FPM (Viton) seal				

2.2 MODEL CODE FOR STANDARD RETURN LINE FILTER ELEMENTS

(Can be used in the following filters: RF, RFD, RFL, RFLD, NF, NFD)

	0660	R	010	V	/-V
Size	0030, 0060, 0110, 0160, 0240, 0280, 0330, 0450, 0500, 0580, 0660, 0750, 0850, 0950, 1300, 1700, 2600, 2700				
Type	R Return line filter element				
Filtration rating in µm	003, 005, 010, 020				
Filter material of element	V				
Supplementary details	KB without bypass valve V FKM (Viton) seal				

Others on request.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = see housing curve in the relevant filter brochure

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 4.1)

4. ELEMENT CHARACTERISTICS

4.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Paper Filter Elements P/HC

up to 10 bar, filtration rating 10, 20 µm

1. PAPER ELEMENT

1.1 DESCRIPTION

Paper filter elements are usually for applications requiring low levels of filtration. Typical applications are, for example, waste compactors for the filtration of lubrication oil or high-viscosity oils > ISO VG 100.

The filter element is constructed from randomly laid organic fibres that are stiffened with a binder.

Compared to P/HC elements, P elements have a smaller pleat depth.

"P/HC" paper elements are used in our return line filters.

Additional paper version

For low differential pressure stability (usually 2.5 to 3 bar) and for use as fuel and engine filters, randomly laid organic fibres are utilized, and stiffened using a phenolic resin as the binder.

HYDAC uses this material primarily in filler/breathers (e.g. BF, ELF: 0005 L 003 P), suction filters (e.g. SF, SFM: 0160 RS 010 P) as well as in spin-on cartridges (e.g. MF, MFD: 0160 MA 010 P). The pleated design provides a large filter surface at low cost.

For further information please see the relevant filter brochures.

1.2 GENERAL DATA

Collapse stability	10 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	10, 20 µm (others on request)

Aquamicron® - Filter Elements AM

up to 10 bar, filtration rating 40 µm

1. AQUAMICRON® ELEMENT

1.1 DESCRIPTION

The presence of water in hydraulic media is a frequent cause of failures, for example, blinding of very fine filters or jamming of valves, and these problems are often incorrectly attributed to excessive levels of solid contamination. In addition, the formation of rust and the reduction in lubricity on bearings and slideways can result in significant deterioration in system function. In other words, water is itself a serious "contaminant" of the hydraulic medium.

Since the conventional methods of dewatering are in most cases uneconomical in relation to the purchase price of the system, HYDAC Aquamicron® technology provides an economically acceptable, yet effective method of separating water from hydraulic media.

Aquamicron® filter elements are specifically designed to separate water from mineral oils, HFD-R oils and biodegradable oils. They are only available in the dimensions to suit HYDAC return line filter elements, size 330 and above. They can therefore be installed in all HYDAC filter housings, size 330 and above, which are equipped with return line filter elements.

The increasing pressure drop across the filter element which is becoming "saturated" with water indicates, with the aid of standard clogging indicators, that it is time to change the element. As an added bonus when using the Aquamicron® technology, solid contamination is also filtered out of the hydraulic medium. This means the Aquamicron® element also doubles as a safety filter. The filtration rating is 40 µm absolute. To guarantee maximum efficiency it is recommended that they are installed offline.

1.2 GENERAL DATA

Max. permitted operating pressure	25 bar
Max. permitted Δp across element	10 bar
Temperature range	0 °C to +100 °C
Flow direction	From outside to inside
Filtration rating	40 µm
Bypass cracking pressure	Return line filter element ("R"): standard 3 bar (others on request)
Category of filter element	Single use element

1.3 PRINCIPLES OF AQUAMICRON® TECHNOLOGY

The separation of water from hydraulic fluids with the aid of the superabsorber embedded in the filter material is based on a physico-chemical reaction. The superabsorber reacts with the water present in the medium and expands to form a gel. This reaction is not reversible, even under increased pressure. The Aquamicron® technology is capable of absorbing circulating water, be it emulsified or free. These filter elements cannot remove dissolved water from the system, i.e. water below the saturation level of the hydraulic medium.

1.4 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant pressure fluid HFD

The following principles apply to Aquamicron® technology:

High water content	→	High absorption rate	
Low water content	→	Low absorption rate	
Unsaturated filter element	→	High absorption rate	
Saturated filter element	→	Low absorption rate	
Hydraulic filter area load (l/min/cm²)	↘	Absorption rate	↗
		Water absorption capacity	↗
		Residual water content	↘
Static pressure	↘	Absorption rate	=
		Water absorption capacity	=
		Residual water content	↘
Pressure and flow rate fluctuations present		Absorption rate	↘

3. DETERMINATION OF THE WATER CONTENT G_w PRESENT IN THE SYSTEM

Two methods can be employed to determine the water content G_w present in the system:

- Hydrogen gas method
- Karl Fischer method to DIN 51777

The hydrogen gas method can be carried out using portable test equipment, e. g. the HYDAC Water Test Kit WTK, however, reading accuracy at water contents below 500 ppm is limited.

The Karl Fischer method on the other hand can only be conducted in the laboratory and is offered by HYDAC Filtrertechnik as a laboratory service.

The water content G_w is usually given in ppm (parts per million) or in percent (100 ppm corresponds to 0.01%).

3.1 DETERMINATION OF THE WATER RETENTION CAPACITY C_w (cm^3)

$$q = Q/A$$

(recommendation: $q_{\text{max}} \leq 0.04$ l/min cm^2)

q = specific filtration area load of a filter element in l/min cm^2

Q = flow rate in l/min

A = filtration area in cm^2 (see Point 4.2)

$$C_w = K_w \times A \text{ (cm}^3\text{)}$$

C_w = Water retention capacity of a filter element in cm^3

K_w = specific water retention capacity dependent on the specific filtration area load in q (10^{-3} cm^3 $\text{H}_2\text{O}/\text{cm}^2$)

A = filtration area in cm^2 (see Pt. 4.2)

3.2 When sizing elements with the water absorbing filter material Aquamicon, we recommend using the table below:

Size	Recommended filter flow rate [l/min]	Water absorption capacity [cm^3] at $\Delta p = 2.5$ bar and a viscosity of 30 mm^2/s
330	13 ideal	260
	100 maximum	180
500	19 ideal	400
	155 maximum	280
660	28 ideal	570
	255 maximum	400
750	48 ideal	982
	390 maximum	691
850	35 ideal	730
	286 maximum	520
950	39 ideal	800
	314 maximum	570
1300	54 ideal	1120
	437 maximum	790
1700	73 ideal	1505
	599 maximum	1059
2600	109 ideal	2230
	870 maximum	1570
2700	98 ideal	2020
	803 maximum	1422

3.3 CALCULATION OF THE WATER QUANTITY M_w TO BE ABSORBED BY THE FILTER ELEMENT

$$m_w = \Delta G_w \times 10^{-3} \times V_T \text{ (cm}^3\text{)}$$

m_w = water quantity to be absorbed by filter element in cm^3

ΔG_w = Difference between the initial and required final water content in ppm

Please note:

It is impossible to achieve a final water content which is below the saturation level of the hydraulic medium!

V_T = Tank volume in l x 100

4. ELEMENT CHARACTERISTICS

4.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm^2/s . The pressure drop changes proportionally to the change in viscosity.

Betamicron®/Aquamicron®- Filter Elements BN4AM

up to 10 bar, filtration rating 3, 10 µm

1. BETAMICRON®/ AQUAMICRON® ELEMENT

1.1 DESCRIPTION

The presence of water in hydraulic media is a frequent cause of failures, for example, blinding of very fine filters or jamming of valves and these problems are often incorrectly attributed to excessive levels of solid contamination. In addition, the formation of rust and the reduction in lubricity on bearings and slideways can result in significant deterioration in system function.

In other words, in addition to solid particles, water is an equally serious contaminant of the hydraulic medium. Since the conventional methods of dewatering are in most cases uneconomical in relation to the purchase price of the system, HYDAC BN4AM technology provides an economically acceptable, yet effective method of separating water from hydraulic media which at the same time achieves absolute filtration of solid particles.

General

BN4AM filter elements are specifically designed to separate water, and to achieve absolute filtration of solid particles, from mineral oils, HFD-R oils and biodegradable oils. A superabsorber reacts with the water present in the medium and expands to form a gel. This reaction is not reversible, even under increased pressure. These filter elements cannot remove dissolved water from the system, i.e. water below the saturation level of the hydraulic medium. Solid particles are also removed by the Betamicron® filter element meshpack.

1.2 GENERAL DATA

Max. permitted operating pressure	10 bar
Max. permitted Δp across element	10 bar
Temperature range	0 °C to +100 °C
Flow direction	From outside to inside
Filtration rating	3, 10 µm
Bypass cracking pressure	Return line filter element ("R"): standard 3 bar (others on request)
Category of filter element	Single use element

1.3 PRINCIPLES OF THE BN4AM COMBINED FILTER ELEMENTS

- BN4AM filter element based on inorganic and water-absorbent fibres
- Exemplary absorption of water from mineral oils with the aid of a superabsorber embedded in the filter material
- Excellent absorption of finest particles over a wide differential pressure range (3, 10 µm absolute)
- Exemplary β-stability over wide differential pressure ranges
- Extremely high contamination retention capacity
- Good chemical resistance through the use of epoxy resins for impregnation and bonding
- Element protection due to high burst pressure stability (e. g. during cold starts and dynamic differential pressure surges)

1.4 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

The following principles apply to water separation:

High water content	→	High absorption rate	
Low water content	→	Low absorption rate	
Unsaturated filter element	→	High absorption rate	
Saturated filter element	→	Low absorption rate	
Hydraulic filter area load (l/min/cm²)	↘	Absorption rate	↗
		Water absorption capacity	↗
		Residual water content	↘

3. DETERMINATION OF THE WATER CONTENT G_w PRESENT IN THE SYSTEM

Two methods can be employed to determine the water content G_w present in the system:

- Hydrogen gas method
- Karl Fischer method to DIN 51777

The hydrogen gas method can be carried out using portable test equipment, e. g. the HYDAC Water Test Kit WTK, however, reading accuracy at water contents below 500 ppm is limited.

The Karl Fischer method on the other hand can only be conducted in the laboratory and is offered by HYDAC Filtertechnik as a laboratory service.

The water content G_w is usually given in ppm (parts per million) or in percent (100 ppm corresponds to 0.01%).

3.1 WATER ABSORPTION - QUICK SIZING TABLE

Size	Recommended filter flow rate [l/min]	Water absorption capacity [cm ³] at $\Delta p = 2.5$ bar and a viscosity of 30 mm ² /s
330	13	180
500	19	280
660	28	400
750	48	691
850	35	520
950	39	570
1300	54	790
1700	73	1059
2600	109	1570
2700	98	1422

NOTE

The information in this brochure relates to the operating conditions and applications described.

For applications or operating conditions not described, please contact the relevant technical department.

Subject to technical modifications.

4. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = \text{see housing curve in the relevant filter brochure}$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 5.1)

5. ELEMENT CHARACTERISTICS

5.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Size	3 μm	10 μm
330	8.7	3.0
500	5.7	2.0
660	3.5	1.2
750	2.3	0.8
850	2.8	0.9
950	2.4	0.8
1300	1.6	0.6
1700	1.3	0.5
2600	0.8	0.3
2700	1.0	0.3

5.2 CONTAMINATION RETENTION CAPACITY IN G

The contamination retention and particle filtration performance of an element are established in the multipass test to ISO 16889. This procedure with its precisely defined test conditions and a standard test dust (ISO MTD) enables the performance data of different elements to be compared.

Size	3 μm	10 μm
330	55.0	60.0
500	83.9	93.9
660	120.0	140.0
750	209.3	234.5
850	156.5	175.3
950	170.0	190.0
1300	240.0	270.0
1700	320.8	359.4
2600	490.0	540.0
2700	430.7	482.5

For information on bypass valve curves, please see Filter Element (Quick Selection) brochure no.: E 7.221../..

Glass fibre filter elements ULP/UHC

with or without pre-filter

flow direction from in to out

up to 6 bar, filtration rating 5, 10, 20, 25 µm

1. GLASS FIBRE ELEMENT

1.1 DESCRIPTION

The 4-layered media structure of the ULP elements were developed on the basis of RT-Filtertechnik's many years of experience in mobile applications. The structure has a very low $\Delta p/Q$ performance curve.

The 5-layered media structure of the UMC elements were developed on the basis of RT-Filtertechnik's many years of experience in mobile applications. The structure has a very high retention rate across the elements' entire service life. It is also highly stable in the event of flow rate fluctuations, which are very common in mobile applications.

1.2 GENERAL DATA

Collapse stability	6 bar
Filter element	ULP = Glass fibre UHC = Glass fibre with pre-filter
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From inside to outside
Filtration rating	5, 10, 20, 25 µm
Bypass cracking pressure	The bypass valve function is realised in the filter or in the element spigot. The cracking pressure is 3 bar as standard (others on request)
Category of filter element	Single use element

1.3 HELIOS PLEAT GEOMETRY: ΔP OPTIMISED FILTRATION/OPTIONAL

Using high-quality folding machines and pleat geometries, high-quality filter elements can always be significantly optimised technologically. In addition, the use of these folding technologies enables the improvement of low-weight, flow-optimised filtration materials in terms of their service life and pulsation stability. The other way round, pulsation resistant filter media of higher weight can be produced with significantly reduced differential pressure difference compared to filter elements folded in the conventional manner.

1.4 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids FHA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

2. MODEL CODE

2.1 MODEL CODE FOR STANDARD PRESSURE FILTER ELEMENTS

Wire Mesh Filter Elements WR

Flow direction from in to out

up to 6 bar, filtration rating 25, 40, 60, 100 µm

1. WIRE MESH ELEMENT

1.1 DESCRIPTION

WR filter elements have a wire mesh with a star-shaped pleat and support cylinder with square perforations. They are used for medium to large flow rates in inline filters, return line filters and suction line filters. Filter elements with a metal wire mesh are often used as an inexpensive and reusable solution. Depending on the requirements (filtration rating, pressure, dynamics) various types of mesh are used, such as twill, linen and Dutch weave. Wire mesh filter elements are always surface filters, which means that they become contaminated faster than single use elements. For the regeneration, it must be borne in mind that elements finer than 40 µm can only be cleaned in the ultrasonic bath.

1.2 GENERAL DATA

Collapse stability	6 bar
Temperature range	-30 °C to +100 °C For sealing material FPM to -10 °C
Flow direction	From outside to inside
Filtration rating	25, 40, 60, 100 µm (others on request)
Bypass cracking pressure	The bypass valve function is realised in the filter or in the element spigot. For a pressure filter element ("D") or a return line filter element ("R") the cracking pressure is 3 bar as standard (others on request) Return line filter element, suction line ("RS"): without bypass valve as standard
Category of filter element	Can be cleaned to extend service life

1.3 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids FHA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.4 CLEANING

Stainless steel wire mesh elements can be cleaned after use. However only a certain level (percentage) of cleaning is achievable. In order to achieve the best possible result, the elements should be cleaned using specialist equipment. The cleaning effect cannot however be predicted. It depends greatly on various conditions

- Filtration rating: The finer the filter material, the worse the cleaning level
- Operating pressure: The higher the operating pressure, the more firmly the contamination particles become embedded in the filter material
- Type of particle: For example, if the contamination consists mainly of fibres, the level of cleaning is worse than if it consists of cube-type particles. In addition it must be noted that with each cleaning process, it is only possible to restore approx. 80-90% of the initial filter area each time, i.e. after 4-5 cleaning cycles, the result might not make economic sense (cleaning costs versus service life).

Further information on cleaning is provided in the operating manual which is available on request.

2. MODEL CODE

2.1 MODEL CODE FOR PRESSURE FILTER ELEMENTS

(Can be used in the following filters: LFR, LPFR, MDFR)

	0080	D	040	WR	/-V
Size 0020, 0045, 0080, 0150, 0250

RT-PLEAT filter elements

Element flow direction from in to out
up to 10 bar, filtration rating 3, 5, 7, 12 and 20 µm

1. RT PLEAT ELEMENT

1.1 DESCRIPTION

Within the HYDAC Group, a new generation of elements has been developed that enables efficient refitting of Pall housing of the types UR319, UR619, UR209 and UR219: RT-PLEAT.

They are used in pressure filter housing, where they provide fine filtration of hydraulic and lubricating oils.

Further information on Betterfit elements is available from the Betterfit database on our website (www.hydac.com) under Service > Online Tools > Betterfit

1.2 FUNCTION

The pleated structure of the new RT-PLEAT filter elements remains highly stable even under operating conditions such as cold starts or high differential pressures. This guarantees a high level of contamination retention and ensures that the contamination remains in the element, even during pressure pulsations. Furthermore, the entire filter surface is used during the service life of the filter element. This means that pressure losses are minimised.

- Long system life time and reliable component protection due to the high separation capacity
- Long element life times due to the high contamination retention capacity and low pressure loss at the element
- Low operating costs due to the long element changing intervals and the economic element price

1.3 GENERAL DATA

Collapse stability	10 bar
Temperature range	-20 °C to +120 °C
Flow direction	From inside to outside
Filtration rating	3, 5, 7, 12, 20 µm
Seal material	FKM
Bypass cracking pressure	Pressure filter element ("D"): Without bypass valve as standard
Category of filter element	Single use element

1.4 STAT-FREE® TECHNOLOGY OPTIONAL

By completely revising the materials used, e.g. through the use of conductive plastics, fully discharge-capable filter elements are the result.

Electrical charging of the filter elements during operation has therefore been reduced to a negligible level. The risks of sudden sparking and the subsequent formation of soot or sludge in the oil are therefore reliably eliminated.

With the new Stat-Free® filter elements, HYDAC has for the first time succeeded in combining excellent electrostatic characteristics with filtration performance. Unprecedented low charge generation in the filter element and in the system fluid is achieved with a new type of filter mesh pack and element design.

1.5 INNOVATIVE OUTER WRAP WITH IMPROVED DIFFUSER EFFECT FOR PRINTING WITH CUSTOMER LOGO

Since the outer wrap can be printed with the customer logo, it also acts as an advertising medium for the OEM

and guarantees security of the spares business. At the same time, the user can be certain of obtaining an original spare part. Particular benefit: the logo remains perfectly legible even in the contaminated

condition.

1.6 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

2. MODEL CODE

2.1 MODEL CODE FOR RT-PLEAT PRESSURE FILTER ELEMENTS

Size	1.28.04 D 03 RT-PLEAT /-V
Type	D Pressure filter element
Filtration rating in μm	03, 05, 07, 12, 20
Filter material of element	RT-PLEAT Collapse stability up to 10 bar
Supplementary details	V FKM seal (standard = must be specified) SFREE Stat-Free® element technology

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = see housing curve in the relevant filter brochure

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 4.1)

4. ELEMENT CHARACTERISTICS

4.1 GRADIENT COEFFICIENTS FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Pressure filter element 1.21. ... "D" ... RT-PLEAT /-V					
Size	3 μm	5 μm	7 μm	12 μm	20 μm
1.21.08	8.90	3.50	3.16	2.61	2.25

1.28.20	7.00	2.30	2.10	1.80	1.60

4.2 CONTAMINATION RETENTION CAPACITY IN G

The contamination retention and particle filtration performance of an element are established in the multipass test to ISO 16889. This procedure with its precisely defined test conditions and a standard test dust (ISO MTD) enables the performance data of different elements to be compared.

Pressure filter element 1.21. ... "D" ... RT-PLEAT /-V					
Size	3 μm	5 μm	7 μm	12 μm	20 μm
1.21.08	41.08	22.63	25.57	47.97	52.77

**The HYDAC
Betterfit Range
With our Investment,
You Can't Lose.**

The HYDAC Betterfit Range: The Royal Flush in Filter Elements.

The Best Combination. Every Time. On Paper and in Practice.

**With HYDAC and the HYDAC Betterfit Range
you hold all the aces
when it comes to conditioning your fluids:**

Global Presence.

HYDAC forges close links with its customers by providing engineering advice and fluid engineering in over 45 international subsidiaries and over 500 distributors and service partners worldwide.

Specialist expertise.

HYDAC has developed expertise in the research, development and production of filter housings, filter systems and filter elements over many decades.

Industry competence.

HYDAC industry competence forged through close cooperation with the most exacting international clients in almost all industries in the world.

Complete range.

HYDAC filter elements provide a comprehensive range to suit all applications and also almost all competitor filters. Our customer-focused service package is included, ranging from specialist advice to availability at short notice.

Quality from the ground up.

In the HYDAC Fluid Care Center, which is our own state-of-the-art industrial laboratory for basic research, functionality and quality testing as well as application-specific development, we explore the most efficient fluid technology solutions.

This results in high-end quality filters and elements with maximum efficiency.

Strongest link in the chain.

As a system partner with wide-ranging industrial experience, HYDAC does its utmost to ensure each filter element is one of the most efficient links in the functionality chain of fluid technology systems. HYDAC therefore guarantees the greatest possible component protection for the longest possible service life.

Better is better than good enough.

The HYDAC Betterfit range combines the best ideas and the best in fluid engineering – filter elements which stand up to every comparison and every challenge.

Don't fall for a cheap bluff.

Using elements of inferior quality can have drastic consequences:

- Poorer cleanliness classes in the customer's system
- Inadequate component protection
- Shorter filter lifetimes
- Threat to operating reliability and even risk of system failures
- Restricted system availability
- Increased Life Cycle Cost for the customer

**Never trust a poker face.
Don't let yourself be taken in!
Trust HYDAC,
Your system will thank you for it!**

The shocking evidence of these no-name elements which have collapsed shows exactly what happens to cheap filter elements after just a few hours operation. The often unseen damage caused to control components and systems can sometimes have the effect of paralysing whole production systems.

By contrast, with HYDAC filter elements and their rigorous and systematic quality, you will have the winning hand for every application.

B-E-T-T-E-R-F-I-T

Better for quality and efficiency.

Here you are guaranteed to find the right element.

The HYDAC Betterfit range covers a wide variety of replacement elements in the dimensions used by competitors, particularly all well-known filter element manufacturers.

Our Betterfit elements are made predominantly from the tried-and-tested Betamicron^{®4} element technology (other materials, such as synthetic fibre or wire mesh are also available).

Put your money on genuine quality equipment and opt for Hydac replacement elements – your system will thank you for it!

By using our Betterfit elements you will benefit from the whole Hydac service package – from oil sampling to oil analysis. This also includes identifying the source of faults and designing filtration concepts.

Hydac supports you at every stage and in all aspects of fluid service.

Just as our motto says "With our investment, you can't lose" we will take care of your system, leaving you to concentrate fully on your core competence.

Steady expansion of the Betterfit range.

Since launching the Betterfit range the number of replacement filter elements has increased daily. We respond to your request. If the required element is not yet available, we will endeavour to add it to the Betterfit product range as quickly as possible once we have examined the design.

Today there are approximately 23,000 replacement elements in the Betterfit line of elements and the number is growing day by day.

BETAMICRON^{®4}

Decades of experience and ongoing further development in the field of hydraulic and lubrication oil filtration have given HYDAC the technological edge in top quality filter element technology.

The high performance Betamicron^{®4} is the predominant material used in the Betterfit element product range.

This innovative glass fibre media will convince you with its exceptionally high contamination retention capacities, excellent filtration efficiency and optimized $\Delta p/Q$ characteristics.

Particular customer benefits of HYDAC filter elements:

- **Energy cost savings** thanks to particularly low pressure drops
- **High quality component protection and long system life** due to excellent filtration efficiency
- Long service life and low operating costs due to particularly high contamination retention capacities
- High degree of operating reliability because of compact and robust construction

EFFICIENCY

Global and yet local.

45 overseas companies and over 500 sales and service partners provide a worldwide presence on the ground. We provide efficient support on demand.

TOTAL CLEANLINESS

And your system will thank you for it.

TECHNICAL SUPPORT

Skilled advisors in the regional offices and overseas subsidiaries.

ONE FOR ALL

All from one supplier.

HYDAC can supply you with the whole spectrum of products including outstanding Fluid Service. Specifically in the area of filtration, we can supply you with every filter element used in your production processes from our Betterfit range - just tell us your filter cartridge requirement and you will receive the complete package from one supplier.

In short: we take care of your filtration needs whilst you concentrate fully on your core competence.

CLEANLINESS

System cleanliness assured by professionalism and quality.

FLUID MANAGEMENT

With HYDAC, your fluid is in safe hands

We know your fluid and welcome the opportunity to help you reduce the burden of fluid service. You will see for yourself the clear benefit of having a hydraulic or lubrication system that works perfectly, leaving you to concentrate fully on your specialism. Entrust us with your fluid and benefit from our Fluid Engineering package since this ensures:

- **A long system life** thanks to better component protection.
- **A definite cost saving** due to reduced operating and downtime costs.

And fits all housings, fluids and cleanliness classes.

INTELLIGENT FLUID SERVICE

By making use of HYDAC fluid service specialists.

In fluid service, too, you can benefit from decades of experience and development.

How HYDAC's excellent fluid service benefits you:

On-site diagnostics with our laboratory vehicles

Specialist staff available on demand

Lower costs thanks to professional oil sample analysis, monitoring and support (condition-based maintenance)

Lower maintenance and spare part costs

Increased operating reliability due to fewer breakdowns

TREND: SYSTEM EXPERTISE

Sub-systems and systems.

HYDAC is not only a component specialist, but also has decades of experience in power unit and system engineering. The filter component is therefore never viewed in isolation, but always as an important part of the whole system. This practice is followed through to the complete system!

With this wealth of expertise in applications and systems, HYDAC automatically sees its individual components, such as filters and filter elements, in conjunction with the whole system and understands how they can best be configured to suit the particular system requirements.

Within the framework of Fluid Engineering HYDAC guarantees you **the right filter and the right filter element in the right location** – because for HYDAC, this is not just wishful thinking, but an everyday reality.

Don't gamble with your components.

Our advice: Invest in genuine quality!

The many years' development in the area of element technology is your guarantee of first class quality in Hydac filter elements and this applies equally to the **Betterfit range**.

By using Betterfit elements, the **Life Cycle Cost** of your system will be optimized, thereby reducing the total costs of the machine or a component, from procurement right through to disposal. Reducing these costs is one of the **megatrends** pursued by large-scale end users in machine building.

Leading automotive manufacturers demand, for example, authoritative data on the **Life Cycle Cost** and the values derived from it – e.g. for machine tools for 10 years life, for presses even up to 30 years life. New investments by machinery manufacturers are decided on the basis of the machine prices and the Life Cycle Cost calculation provided.

Ziel: Life Cycle Cost-Optimierung

Cost progression during the whole life cycle of the machine / system

Quelle: MAN B & W Diesel AG am Beispiel Daimler Chrysler

The winners in terms of system properties

With Us, Your Fluid is in Safe Hands.

The specialists at HYDAC have a good knowledge of your fluid and welcome the opportunity to help you reduce the burden of fluid service. You will see for yourself the clear benefit of having a hydraulic or lubrication system that works perfectly, leaving you to concentrate fully on your area of expertise.

When you decide on a HYDAC Betterfit element, you are not "just" buying a filter element, but you are also benefitting at the same time from the HYDAC network of expertise and service available worldwide:

Highest level of operating reliability for your applications

In HYDAC you have a professional partner for all aspects of fluid cleanliness and operating reliability for your system.

The complete HYDAC Betterfit range currently comprises approx. 23,000 elements and is growing daily.

The HYDAC filter range is also impressive with over 50 types of filter in every conceivable size and type. In addition, new individual solutions are constantly being developed, partly in active development partnership with the manufacturers.

HYDAC filters offer you the following advantages.

Low costs

the filter elements and housings are optimized for the particular industry

Easy maintenance

simple element change and easy-to-install filter housing

High level of operating reliability

filter media have high filtration efficiency for exceptional cleanliness classes and benefit from a high level of production quality

Low operating costs

particularly low pressure drops across filter and filter element for low energy consumption

All components and systems from one company

providing comprehensive system know-how and integrated system approach

Worldwide availability and advice

provided by our worldwide network of regional offices, agents and service partners

HYDAC, your Partner for Hydraulics and Lubrication Applications.

With 8,000 employees worldwide, HYDAC is one of the leading suppliers of fluid technology, hydraulic and electronic equipment.

Our wide range of products, combined with our established expertise in all aspects of hydraulics and lubrication applications qualify HYDAC to be your professional partner for every aspect of hydraulics. Particularly in the area of filtration you will profit from the decades of HYDAC experience and development successes.

Our quality and environment certification ISO 9001/2000 and ISO 18001 denote first class quality and responsible management of our resources.

That's why you can count on HYDAC - we provide, you profit.

All from one supplier.

HYDAC will help find the solution for you!

From first class components right up to turnkey system solutions, from support during commissioning to maintenance and optimization, from professional filtration, to oil condition monitoring and expert cooling.

First class laboratory and testing expertise in the HYDAC Fluid Care Center

The new Fluid Care Center, specifically designed for filters and filter monitoring, is an important component in HYDAC fluid management and the HYDAC service concept. Equipped with the most up-to-date instruments and test rigs, it offers a huge range of options for fluid analysis and application-specific filtration efficiency testing.

In our new laboratories, highly qualified staff are dedicated to continuously improving products and developing applications as well as carrying out analyses to customer specification – always tailored to the particular operating conditions. In addition to the central facility at our headquarters there are further laboratories and mobile fluid laboratories in several HYDAC centres in Germany and overseas.

Just one example of the numerous filter testing procedures: **Multipass test rig.**

Oil analysis in the HYDAC laboratory at company headquarters.

Filter Clogging Indicators

1. TECHNICAL SPECIFICATIONS

1.1 GENERAL

HYDAC clogging indicators are designed to indicate visually and/or electrically when the filter elements must be cleaned or changed. The operational safety of a system and efficient utilisation of a filter element can only be guaranteed if clogging indicators are used.

Depending on the type of filter, vacuum, return line or differential pressure clogging indicators are used.

1.2 SEALS

NBR (= Perbunan) or V (= Viton)

1.3 INSTALLATION

Some users install filters without clogging indicators and prefer instead to replace or clean the elements according to a specified time schedule or according to a set number of operating hours. However, this involves some risk.

Fitting a clogging indicator has two main advantages:

- The operator no longer has to estimate when the element is clogged.
- The unnecessary costs of changing the element too early are avoided.

All standard filters can be fitted with a clogging indicator at any time, by simply screwing it in.

1.4 DESIGN

Return line indicators

These are used for return line and suction filters. In return line filters they react to the increasing static pressure before the filter element, and in suction filters to the decreasing pressure after the filter element, which is caused by increasing contamination.

Differential pressure indicators

These are used for all inline filters and react to the increasing pressure differential caused by increasing contamination of the filter element.

The simplest installation of the differential clogging indicator is via G 1/2" cavity (according to HYDAC works standard HN 28-22)

The differential pressure indicator type V02 is piped up separately.

1.5 SPECIAL INDICATORS

Mobile indicators

These indicators have been developed for special applications and are fitted with AMP Junior Power Timer, AMP Superseal or Deutsch plugs.

ATEX indicators

These indicators are used in potentially explosive locations and are subject to the ATEX Equipment Directive 2014/34/EU and the ATEX Operator Directive 1999/92/EG.

UL and CSA indicators

Indicators which are exported to the USA and Canada often require classification according to current UL and CSA standards. The UL and CSA symbols are found on many products, particularly in the field of electrical engineering.

3.4 MOBILE INDICATORS

3.4.1 RETURN LINE

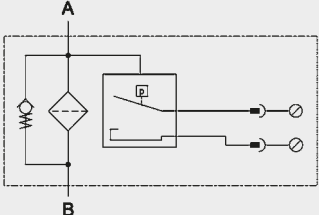

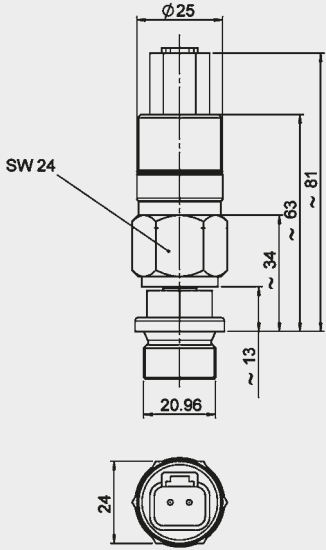

VMF x CM.x

 	Type of indication	electrical switch	
	Weight	90 g	
	Pressure setting or indication range	2 bar ±0.3 bar	
	Permitt. operating pressure	10 bar	
	Permitt. temperature range	-10 °C to +100 °C	
	Thread	G 1/8	
	Max. torque	10 Nm	
	Switching type	N/C or N/O (change-over contacts)	
	Max. switching voltage	24V	
	Electrical connection	Male connection M12 x 1	
	Max. switching voltage at resistive load	250 W = 300 VA ~	
	switching capacity	Ohmic 6 A at 24 V = Ohmic 0.03 to 6 A at max. 230 V ~	
	Protection class to DIN 40050	IP 67 (only if the connector is wired and fitted correctly)	
	Order example	VMF 2 CM.1/-4M0	

VMF x FD.x (plug connection: Deutsch DT 04-2P)

 	Type of indication	electrical switch	
	Weight	70 g	
	Pressure setting or indication range	2 bar ±0.3 bar	
	Permitt. operating pressure	11 bar continuous	
	Permitt. temperature range	-30 °C to +100 °C	
	Thread	G 1/8	
	Max. torque	10 Nm	
	Switching type	N/O or N/C	
	Max. switching voltage	42 V	
	Electrical connection	Deutsch DT 04-2P	
	Max. switching voltage at resistive load	60 W = 100 VA ~	
	switching capacity	Ohmic 2.5 A at 24 V = Ohmic 1 A at 220 V ~	
	Protection class to DIN 40050	IP 67 (only if the connector is wired and fitted correctly)	
	Order example	VMF 2 FD.0 /-2M0	

VR x FD.x (plug connection: Deutsch DT 04-2P)

 	Type of indication	electrical switch	
	Weight	90 g	
	Pressure setting or indication range	2 bar ±0.3 bar	
	Permitt. operating pressure	11 bar continuous	
	Permitt. temperature range	-30 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	33 Nm	
	Switching type	N/O or N/C	
	Max. switching voltage	42 V	
	Electrical connection	Deutsch DT 04-2P	
	Max. switching voltage at resistive load	60 W = 100 VA ~	
	switching capacity	Ohmic 2.5 A at 24 V = Ohmic 1 A at 220 V ~	
	Protection class to DIN 40050	IP 67 (only if the connector is wired and fitted correctly)	
	Order example	VR 2 FD.0 /-2M0	

VR x LEM.x

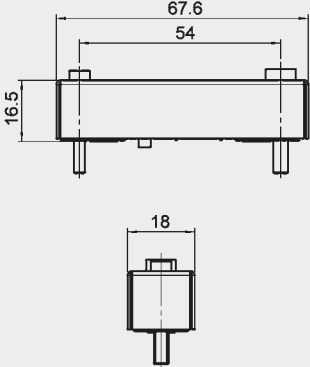

Type of indication	visual, red pin and electrical switch 1 switching contact at 100% of the pressure setting
Weight	140 g
Pressure setting or indication range	2 bar -0.2 bar
Permitt. operating pressure	7 bar
Permitt. temperature range	-10 °C to +100 °C
Thread	G 1/2
Max. torque	15 Nm
Switching type	N/C or N/O contacts Reed contacts (change-over contacts)
Max. switching voltage	24V
Electrical connection	Male connection M12 x 1
Max. switching voltage at resistive load	15 W = max. 15 VA ~
switching capacity	Ohmic 1 A at 15 V = Ohmic 1 A at 15 V ~
Protection class to DIN 40050	IP 65
Order example	VR 2 LEM.1/-4M0

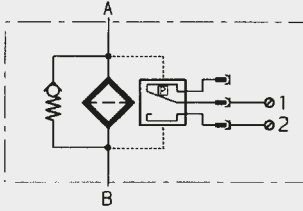

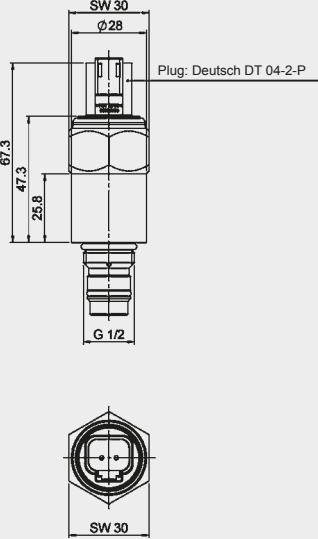

3.4.2 DIFFERENTIAL PRESSURE

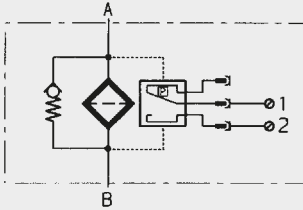

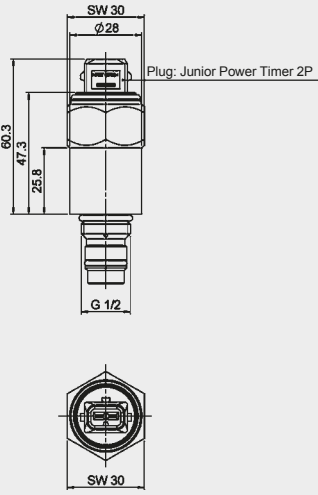

VL x BF.x

	Type of indication	visual	
	Weight	25 g	
	Pressure setting or indication range	1 bar -10% 2.5 bar -10%	
	Permitt. operating pressure	40 bar

	Electrical connection	Male connection M12 x 1	
	Max. switching voltage at resistive load	15 W = max. 15 VA ~	
	switching capacity	Ohmic 1 A at 15 V = Ohmic 1 A at 15 V ~	
	Protection class to DIN 40050	IP 65	
	Order example	VD 5 LEM.1/-4M0	

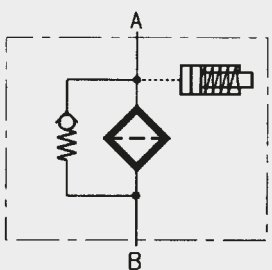

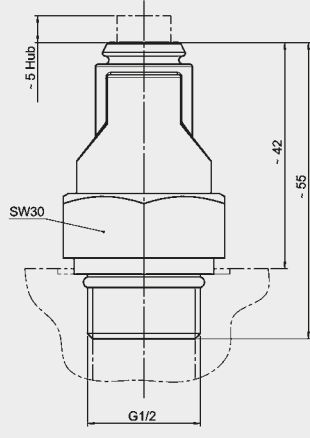

3.5 INDICATORS IN ACCORDANCE WITH ATEX DIRECTIVE

3.5.1 RETURN LINE

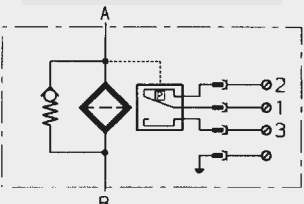

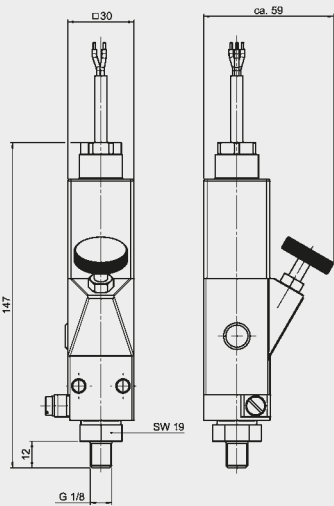

VR x B.x (ATEX) Can be used on aluminium filters up to Zone 1

 	Type of indication	visual, red pin	
	Weight	44 g	
	Pressure setting or indication range	2 bar -0.2 bar	
	Permitt. operating pressure	7 bar	
	Permitt. temperature range	-10 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	15 Nm	
	Switching type	-	
	Max. switching voltage	-	
	Electrical connection	-	
	Max. switching voltage at resistive load	-	
	switching capacity	-	
	Protection class to DIN 40050	-	
	Order example	VR 2 B.0 /-2GC	

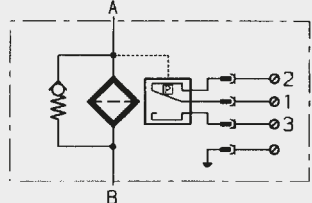

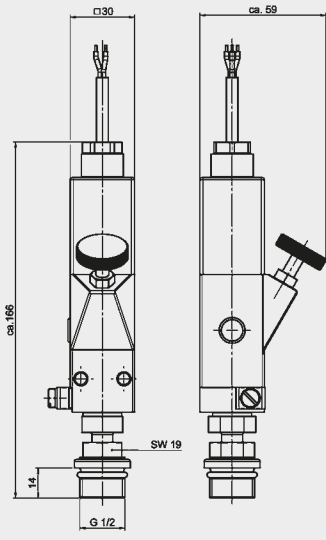

VR x B.x (ATEX) Can be used on steel/cast iron filters up to Zone 1

 	Type of indication	visual, red pin	
	Weight	44 g	
	Pressure setting or indication range	2 bar -0.2 bar	
	Permitt. operating pressure	7 bar	
	Permitt. temperature range	-10 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	15 Nm	
	Switching type	-	
	Max. switching voltage	-	
	Electrical connection	-	
	Max. switching voltage at resistive load	-	
	switching capacity	-	
	Protection class to DIN 40050	-	
	Order example	VR 2 B.0 /-2GC-SO174	

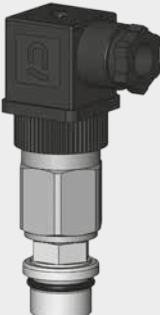

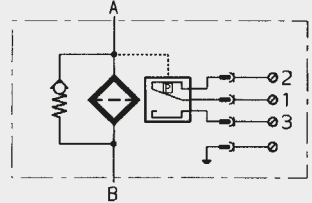

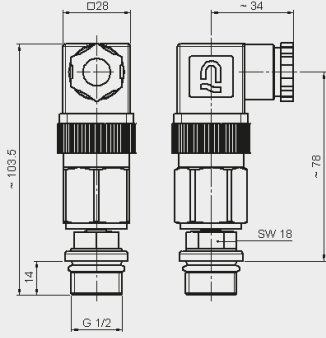

VMF x C.x /-Ex2G

 	Type of indication	electrical switch	
	Weight	415 g	
	Pressure setting or indication range	2 bar ±0.5 bar	
	Permitt. operating pressure	200 bar	
	Permitt. temperature range	-20 °C to +70 °C (T6)/-20 °C to +80 °C (T5)	
	Thread	G 1/8	
	Max. torque	10 Nm	
	Switching type	N/C or N/O (change-over contacts)	
	Max. switching voltage	250 V	
	Electrical connection	Cable connection PG 9 Cable length 2 m	
	Max. switching voltage at resistive load	62.5 W = 250 VA ~	
	switching capacity	Ohmic 0.25 A at 250 V = Ohmic 1 A at 250 V ~	
	Protection class to DIN 40050	IP 65	
	ATEX designation	Ⓔ II 2G EEx d IIC T6 / T5	
	Order example	VMF 2 C.0 /-Ex2G	

VR x C.x /-Ex2G

 	Type of indication	electrical switch	
	Weight	470 g	
	Pressure setting or indication range	2 bar ±0.5 bar	
	Permitt. operating pressure	40 bar	
	Permitt. temperature range	-20 °C to +70 °C (T6)/-20 °C to +80 °C (T5)	
	Thread	G 1/2	
	Max. torque	33 Nm	
	Switching type	N/C or N/O (change-over contacts)	
	Max. switching voltage	250 V	
	Electrical connection	Cable connection PG 9 Cable length 2 m	
	Max. switching voltage at resistive load	62.5 W = 250 VA ~	
	switching capacity	Ohmic 0.25 A at 250 V = Ohmic 1 A at 250 V ~	
	Protection class to DIN 40050	IP 65	
ATEX designation	II 2G Ex d IIC T6 / T5		
Order example	VR 2 C.0 /-Ex2G		

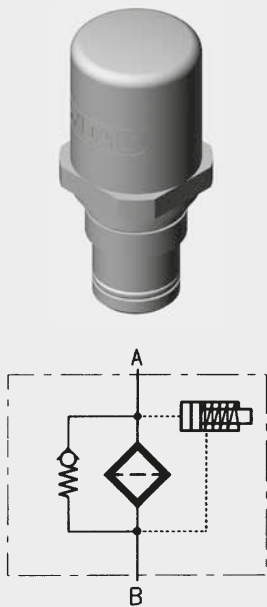

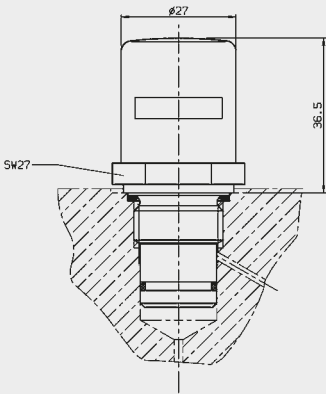

VR x C.x (ATEX) Can be used on filters up to Zone 1 *

 	Type of indication	electrical switch	
	Weight	340 g	
	Pressure setting or indication range	2 bar ±0.3 bar	
	Permitt. operating pressure	40 bar	
	Permitt. temperature range	-30 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	33 Nm	
	Switching type	N/C or N/O (change-over contacts)	
	Max. switching voltage	*	
	Electrical connection	Male connection M20 Female connector to DIN EN 175301-803	
	Max. switching voltage at resistive load	*	
	switching capacity	*	
	Protection class to DIN 40050	IP 65 (only if the connector is wired and fitted correctly)	
Order example	VR 2 C.1 /-2GBC		

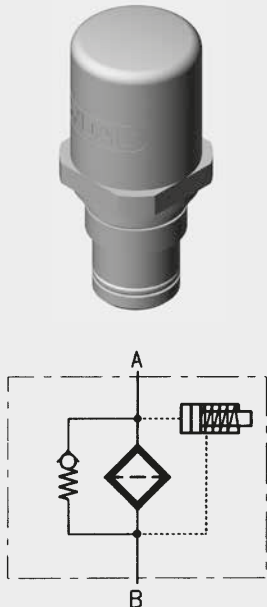

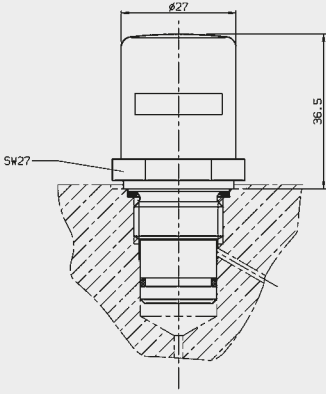

* The clogging indicator is simple electrical operating equipment according to DIN EN 60079-14 and may only be used in intrinsically safe circuits (supplied with manufacturer's declaration and operating instructions).

3.5.2 DIFFERENTIAL PRESSURE

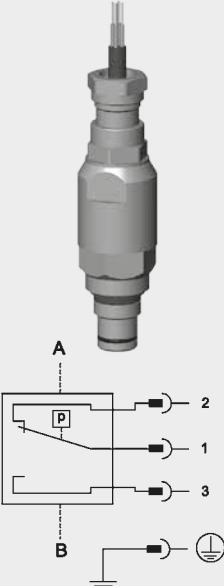

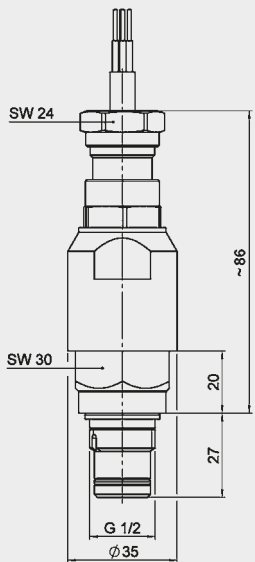

VM x B.x (ATEX) Can be used on aluminium filters up to Zone 1

	Type of indication	visual, red/green band Automatic reset	
	Weight	110 g	
	Pressure setting or indication range	5 bar -10% 8 bar ±10%	
	Permitt. operating pressure	210 bar	
	Permitt. temperature range	-30 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	33 Nm	
	Switching type	-	
	Max. switching voltage	-	
	Electrical connection	-	
	Max. switching voltage at resistive load	-	
	switching capacity	-	
	Protection class to DIN 40050	-	
	Order example	VM 5 B.1 /-2GC	

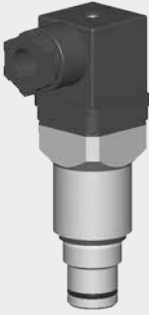

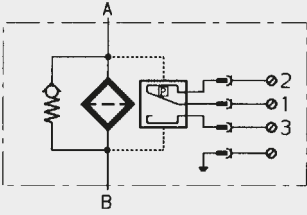

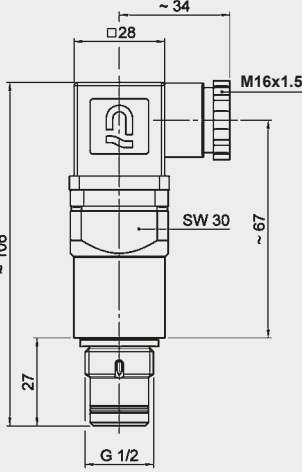

VD x B.x (ATEX) Can be used on filters up to Zone 1

	Type of indication	visual, red/green band Automatic reset	
	Weight	110 g	
	Pressure setting or indication range	5 bar -10% 8 bar ±10%	
	Permitt. operating pressure	420 bar	
	Permitt. temperature range	-30 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	100 Nm	
	Switching type	-	
	Max. switching voltage	-	
	Electrical connection	-	
	Max. switching voltage at resistive load	-	
	switching capacity	-	
	Protection class to DIN 40050	-	
	Order example	VD 5 B.1 /-2GC	

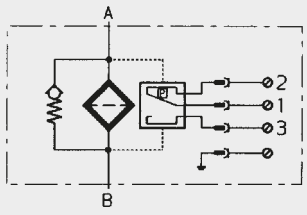

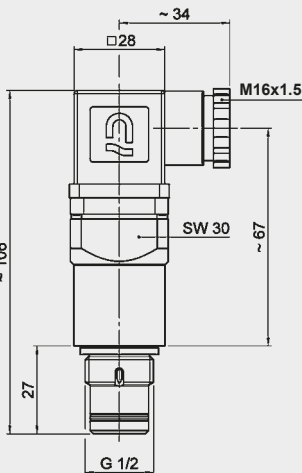

VD x C.x /-2GEXDIIC

	Type of indication	electrical switch	
	Weight	from 600 g	
	Pressure setting or indication range	2 bar -10% 5 bar -10% 8 bar ±10%	
	Permitt. operating pressure	420 bar	
	Permitt. temperature range	-20 °C to +60 °C (setting) (media temperature max. 75 °C)	
	Thread	G 1/2	
	Max. torque	100 Nm	
	Switching type	Change-over	
	Max. switching voltage	250 V	
	Electrical connection	Cable connection	
	Max. switching voltage at resistive load	60 W = 100 VA ~	
	switching capacity	ohmic 3 A at 24 V = ohmic 0.03 A to 5 A at 250 V ~	
	Protection class to DIN 40050	IP 66	
	ATEX designation	II 2G Ex d IIC T6	
Order example	VD 2 C.1 /-2GEXDIIC		

VM x C.x (ATEX) Can be used on aluminium filters up to Zone 1 *

	Max. switching voltage at resistive load	*	
	switching capacity	*	
	Protection class to DIN 40050	IP 65 (only if the connector is wired and fitted correctly)	
Order example	VD 5 C.0 /-2GBC-SO135		

* The clogging indicator is simple electrical operating equipment according to DIN EN 60079-14 and may only be used in intrinsically safe circuits (supplied with manufacturer's declaration and operating instructions).

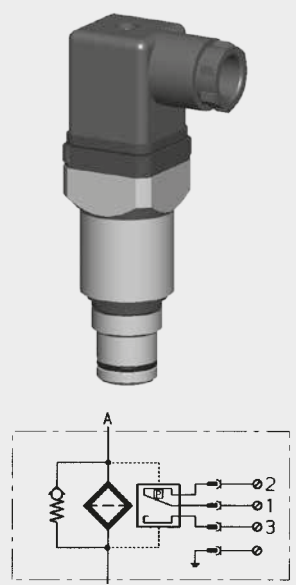

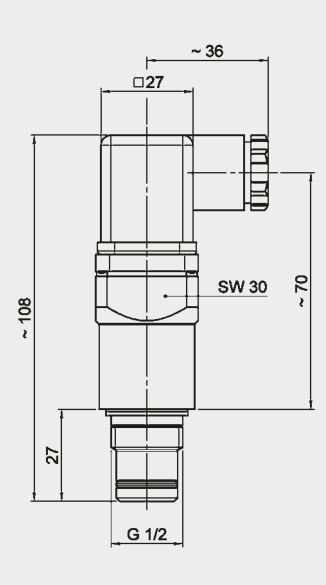

3.6 INDICATORS WITH UL OR CSA APPROVAL

3.6.1 DIFFERENTIAL PRESSURE

VM x C.x (UL, Standard 508)

	Type of indication	electrical switch	
	Weight	120 g	
	Pressure setting or indication range	2 bar -10% 5 bar -10% 8 bar ±10%	
	Permitt. operating pressure	210 bar	
	Permitt. temperature range	-30 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	33 Nm	
	Switching type	N/C or N/O (change-over contacts)	
	Max. switching voltage	115 V	
	Electrical connection	Male connection M20 Female connector to DIN EN 175301-803	
	Max. switching voltage at resistive load	60 W = 100 VA ~	
	switching capacity	ohmic 3 A at 24 V =	
	Protection class to DIN 40050	IP 65 (only if the connector is wired and fitted correctly)	
	Order example	VM 5 C.0 /-CRUUS	

VD x C.x (UL, Standard 508)

	Type of indication	electrical switch	
	Weight	120 g	
	Pressure setting or indication range	2 bar -10% 5 bar -10% 8 bar ±10%	
	Permitt. operating pressure	420 bar	
	Permitt. temperature range	-30 °C to +100 °C	
	Thread	G 1/2	
	Max. torque	100 Nm	
	Switching type	N/C or N/O (change-over contacts)	
	Max. switching voltage	115 V	
	Electrical connection	Male connection M20 Female connector to DIN EN 175301-803	
	Max. switching voltage at resistive load	60 W = 100 VA ~	
	switching capacity	ohmic 3 A at 24 V =	
	Protection class to DIN 40050	IP 65 (only if the connector is wired and fitted correctly)	
	Order example	VD 5 C.0 /-CRUUS	

3.6.2 RETURN LINE

VR x C.x (CSA)

Type of indication	electrical switch
Weight	340 g
Pressure setting or indication range	2 bar -0.3 bar
Permitt. operating pressure	40 bar
Permitt. temperature range	-5 °C to +120 °C
Thread	G 1/2
Max. torque	30 Nm
Switching type	N/C or N/O (change-over contacts)
Max. switching voltage	230 V
Electrical connection	Male connection PG 9 Female connector to DIN EN 175301-803
Max. switching voltage at resistive load	250 W = 300 VA ~
switching capacity	ohmic 4 A at 24 V ohmic 0.3 to 4 A at max. 230 V ~
Protection class to DIN 40050	IP 65 (only if the connector is wired and fitted correctly)
Order example	VR 2 C.0 /-CSA

4. MODEL CODE

VR 2 D . X /-V-L24

4.1 STANDARD CLOGGING INDICATORS

Type

- VMF return line indicator; connection G 1/8
- VR return line indicator; connection G 1/2
- VRD return line indicator; for differential pressure cavity
- VM differential pressure indicator; up to 210 bar operating pressure
- VD differential pressure indicator; up to 420 bar operating pressure
- VL differential pressure indicator; up to 25 bar operating pressure
- V02 differential pressure indicator; piped separately; up to 100 bar operating pressure

Pressure setting

see particular clogging indicator

Version

- B visual with automatic reset (for vertical installation only!)
- BF visual, mobile
- BM visual with manual reset
- C electrical
- CA electrical with AMP connector (Mark II)
- CD electrical with Deutsch connector (DT 04-2P)
- CJ electrical with AMP Junior Power Timer connector
- CM electrical with M12x1 connector
- CS electrical with AMP Superseal connector
- D visual/electrical
- E pressure gauge, horizontal
- ES pressure gauge, vertical
- F pressure switch
- FD pressure switch with Deutsch connector (DT 04-2P)
- FJ pressure switch with AMP Junior Power Timer connector
- FS pressure switch with AMP Superseal connector
- GC electronic
- GW electronic
- K pressure gauge, horizontal
- LE visual/mechanical with 100% switching contact
- LEM visual/mechanical with 100% switching contact and M12x1 connector
- LZ visual/mechanical with 75% and 100% switching contact
- M electrical, earth-switching
- R pressure gauge, horizontal
- RS pressure gauge, vertical
- UBM visual, negative pressure
- UE negative pressure gauge, horizontal
- UF negative pressure switch
- V visual/analogue
- VE visual/analogue with 100% switching contact
- VZ visual/analogue with 75% and 100% switching contact

Modification number

- X the latest version is always supplied

Supplementary details

- 30C cold start suppression of switch outputs up to 30 °C ±5 °C
(only for C-, D-, LZ indicators; power supply only with direct current – max. 24 volts;
C and D indicators only for VD and VM; D and LZ indicators only as N/O contact)
- L... lamp with appropriate voltage (24, 48, 110, 230 volts)] only for
- LED 2 light-emitting diodes up to 24 volts] version "D"
- OE N/C function
- SO135 indicator suitable for PLC control via gold crosspoint contacts
- W suitable for oil/water emulsions (HFA, HFC)
- V seal made from Viton (FKM), suitable for phosphate ester fluid (HFD-R) and biodegradable oils
(must be specified for version "GW")
Addition: For VMF indicators B, LE, LZ and C/-EX2G a "/-V" must be added for a Viton version.
For all other VMF versions, the standard is V and is not specified.

Supplementary details for "GC" type

- 113 N/O function pressure peak suppression up to 10 sec.
cold start suppression of switching outputs
(PNP technique, positive switching) up to 25 °C] **Must be specified!**
Others on request
- 123 N/C function pressure peak suppression up to 10 sec.
cold start suppression of switching outputs
(PNP technique positive switching) up to 25 °C]
- 30C cold start suppression of switching outputs up to 30 °C (other temperatures on request)
- LED 3 LEDs (green, yellow, red) in terminal box
- PF floating switching outputs (due to relay in the plug)
- SP analogue signal: voltage output 1-10 V] if SP or SQ are not specified
- SQ analogue signal: voltage output 4 to 20 mA (current source)] "current sink" model supplied

Supplementary details to "GW" type

- 113 N/O function pressure peak suppression up to 10 sec.
cold start suppression of switching outputs
(PNP technique positive switching) up to 25 °C] **Must be specified!**
Others on request
- 123 N/C function pressure peak suppression up to 10 sec.
cold start suppression of switching outputs
(PNP technique positive switching) up to 25 °C]

Supplementary details for "LZ" type

- AV plug and connector to AUDI, VW specification
- BO plug and connector to BMW, Opel, Ford specification
- BO-LEDas for BO, but with progressive LED strip
- CN electrical connection, 1 connector DIN 43651 with 3 LEDs (to CNOMO specification NF E 48-700)
- DB electrical connection, 1 connector to DIN 43651 with 3 LEDs (to Daimler-Benz and BMW specification)
- D4C plug and connector to Daimler-Chrysler specification with cold start suppression 30 °C

Supplementary details to "ATEX" type

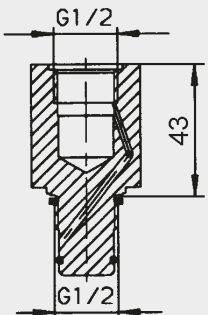

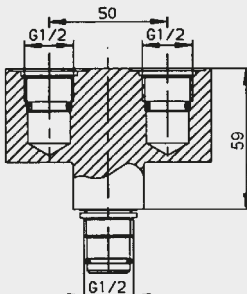

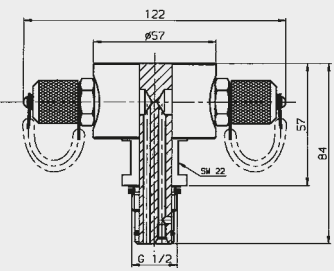

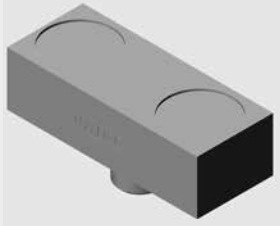

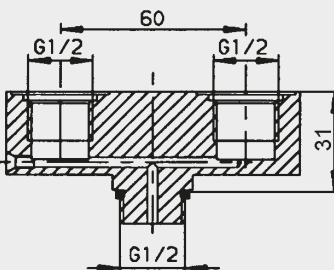

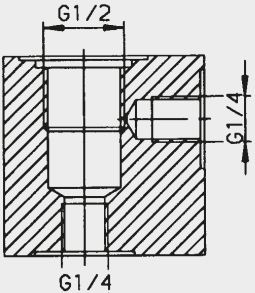

- 2GC for visual indicator type "B" with ATEX certificate
- 2GBC for electrical indicator type "C" with ATEX certificate (the switch used in the indicator is a passive component according to EN 50020 and can therefore be used in intrinsically safe circuits as simple apparatus in accordance with EN 60079-14)
- 2GEXDIIC for electrical indicator suitable for use in Zone 1 (Category 2), gas atmosphere, Category d (Flameproof Enclosure), Explosive subdivision IIC to ATEX directive
- EX2G Ex-protection type for the return line indicator type "C"

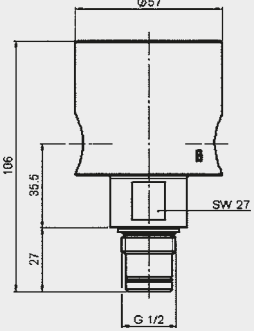

Supplementary details for "UL" and "CSA" approval

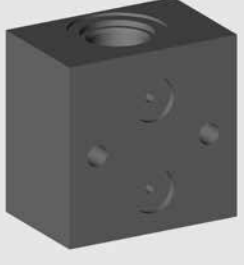

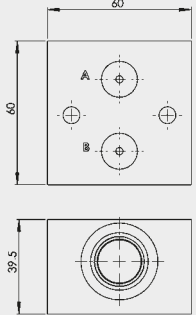

- CRUUS for electrical differential indicator type "C" with UL approval
- CSA for electrical return line indicator type "C" with CSA approval

5. ADAPTERS

5.1 TYPES

	<p>Designation ADAPTER VD-D-S.0</p> <p>Part no. 00318736</p> <p>Description Extending adapter for differential pressure cavity to HYDAC works standard HN 28-22</p>	
	<p>Designation ADAPTER VD-D+D-S+S.0</p> <p>Part no. 00318732</p> <p>Description Y-adapter to convert 1 differential pressure cavity into 2 differential pressure cavities according to HYDAC works standard HN 28-22. Swivel-type on request!</p>	
	<p>Designation ADAPTER VD-1/4+1/4-W+W.0 /-00404337</p> <p>Part no. 00404337</p> <p>Description Test adapter for different pressure cavity according to HYDAC works standard HN 28-22. To test the pressure before and after the filter element. Also available without minimes couplings (on request)!</p>	
	<p>Designation ADAPTER VR-R+R-S+S.0</p> <p>Part no. 00318741</p> <p>Description Y-adapter to convert 1 return line cavity into 2 return line cavities (G 1/2) Swivel-type on request!</p>	
	<p>Designation ADAPTER V 1/4 I-D-S.0</p> <p>Part no. 00318730</p> <p>Description Connection adapter for piping clogging indicators separately with differential pressure cavity according to HYDAC works standard HN 28-22. Two connections G 1/4 (one before and one after the filter element)</p>	

	Designation	ADAPTER VD-D+1/4+1/4-S+W+W.0	
	Part no.	00318744	
	Description	Extending adapter for differential pressure cavity according to HYDAC works standard HN 28-22. Also two connections, one before and one after the filter element.	

	Designation	ADAPTER VF-D-S.0 /-RT	
	Part no.	On request	
	Description	only for the following filters: LFR, LPFR, MDFR, RFLR, RKMR, RMER, RMTR, RPER	

5.2 MODEL CODE (= EXAMPLE)

ADAPTER VD-D+1/4+1/4-S+W+W.X /-ESB

Connection

VD differential pressure indicator; connection G 1/2
 VR return line indicator; connection G 1/2
 V¼ differential pressure indicator; connection G 1/4 internal
 VF differential pressure indicator; flange type

Ports (several ports are possible!)

D differential pressure cavity G 1/2
 R return line cavity G 1/2
 MF cavity for pressure gauge and pressure switch
 1/4 cavity G 1/4 for Minimesstest points (M16 x 1.5)
 1/8 cavity G 1/8 for Minimesstest points (plug-in connection)

Orientation of the ports

S vertical
 W horizontal

6. DESINA SPECIFICATION

DESINA is a fully comprehensive system intended to bring standardization and decentralization to the field of fluid technology and to electrical installation of machinery and systems. The system engineering, automotive and supply industries have worked together to draw up specifications of the necessary components. DESINA makes use of tried-and-tested solutions, such as open bus systems, standard industrial plugs etc.

By standardizing components, interfaces and connection systems, such as a hybrid field bus cable (Cu/LWL), a wide range of different field bus systems can be made compatible on a single physical base.

6.1. TOTAL CONCEPT FOR MACHINE TOOL INSTALLATION

6.2. CLOGGING INDICATORS

The following clogging indicators are approved to DESINA specification:

- VD 5 LZ.x /-D4C
- VR 2.5 LZ.x /-D4C
- VD 5 LZ.x /-BO
- VR 2.5 LZ.x /-BO
- VD 5 LZ.x /-AV
- VR 2.5 LZ.x /-AV
- VR 2.5 LZ.x /-GM

all with M 12 x 1 connector!

DESINA

The DESINA logo is shown on the type code label of approved clogging indicators.

NOTE

The information in this brochure relates to the operating conditions and applications described.

For applications or operating conditions not described, please contact the relevant technical department.

Subject to technical modifications.

Plastic Tank Systems

Standard models

Basic version
45 litres

70 litres

Premium version
45 litres

70 litres

1. TECHNICAL SPECIFICATIONS

1.1 PLASTIC TANK SYSTEMS

When ordering tank systems, the customer receives the complete system from one company, factory-tested and ready-to-install. It includes the tank, hydraulic filter, breather, fluid level gauge, with standard or special threaded connections, depending on the version. What is more, the client will also save considerably on installation, logistics and transportation costs.

Our tank systems are available in two versions: Basic and Premium.

1.2 FILTER ELEMENTS

The HYDAC filter elements used in the plastic tank systems are validated and their quality is constantly monitored according to the following standards:

ISO 2941, ISO 2942, ISO 2943,
ISO 3724, ISO 3968, ISO 11170,
ISO 16889

1.3 TANK SPECIFICATIONS

Tank volume	45 or 70 litres
Materials	PA model: Polyamide (PA6) PE model: Crosslinked polyethylene (XLPE)
Maximum operating temperatures	-25 °C to +105 °C for PA6 -30 °C to +65 °C for XLPE
Colour	Basic version: natural/transparent Premium version: black
Filtration ratings and materials	On return line filter: 10 µm abs. (Mobilmicron) On the air breather: 3 µm paper On the filler-breather filter: 3 µm paper On the suction filter: 125 µm wire mesh

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Plastic tanks are generally used where a light, space-saving design is required, typically in mobile hydraulics.

1.6 SPECIAL MODELS AND ACCESSORIES

- Clamping bands, vertical or horizontal, depending on the application (please contact the HYDAC Accessories division)
- Customized tank versions and steel tanks (please contact Filter Division Technical Sales or one of our regional offices)
- Extension for oil outlet

1.7 SPARE PARTS

See original spare parts list for the relevant filter.

1.8 COMPATIBILITY WITH OPERATING FLUIDS DIN ISO 2943:

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids to VDMA 24568 HETG, HEES, HEPG on request
- Operating fluids with high water content (>50% water content) on request

2. MODEL CODE (also order example)

Tank PE 45 SK 1 . X /-...

Type

Tank

Material

Tank size

45 45 litres
70 70 litres

Tank versions (see also point 3)

SB Standard tank - Basic:

- includes return line filter RFM 165 (for 45 l) or RFM 185 (for 70 l) incl. 10 µm Mobilemicron filter material
- includes air breather BF 30
- includes suction connection M48 x 2
- includes drain G 1/2 with threaded plug DIN 908

SK Standard tank - Premium:

- includes return line filter RFM 165 (for 45 l) or RFM 185 (for 70 l) incl. 10 µm Mobilemicron filter material
- includes filler/breather ELF 30/-KT
- includes suction filter 0070 SHB 125 W /-M48 (DN32)
- includes fluid level gauge FSA
- includes additional connection G 1/2
- includes additional connection G 1
- includes drain G 1/2 with threaded plug DIN 908

CabinAirCare CACR

Housing external/internal to the vehicle

Steel housing mounted on cab

Plastic housing mounted on cab

Plastic housing installed in cab

1. TECHNICAL SPECIFICATIONS

1.1 CABINAIRCARE

Due to increasingly large loads and the tightening of requirements for air purity in vehicle cabs in sectors such as the construction and agricultural industries, existing systems for vehicle air conditioning and air filtration are no longer sufficient. The number of ultrafine particles is sometimes alarmingly high, be it due to the frequent use of combustion engines or technical improvements in pre-filtration. These ultrafine particles and nanoparticles not only collect in the lungs, but due to their size they also enter the bloodstream and spread throughout the human body. This may cause vulnerabilities to diseases such as asthma and cardiovascular illnesses. This has now been recognised by the authorities, and legal regulations will be passed to account for these changes in the environmental conditions. To meet these demands and, of course, to provide a healthy cab climate conducive to effective working, HYDAC already offers highly efficient air filter systems that can be fitted or retrofitted into vehicle cabs.

1.2 FUNCTION

For the filtration of airborne pollutants, including nano-particles and gases.

1.3 APPLICATION BENEFITS

HYDAC provides designs for specific target groups and, as required, adjustment of the entire filter system, for example to suit agricultural applications (=CACRA; certified to DIN EN 15695), construction (=CACRB) or special applications with increased air purity requirements (rescue vehicles, sanitary cabins).

A patented closing and sealing concept offers reliable protection for employees and operators inside closed cabs and passenger compartments.

1.4 TECHNICAL SPECIFICATIONS

Air flow rate	30 – 120 m ³ /h (max. depending on choice of fan)
Possible overpressure in vehicle cab	25 Pa – 300 Pa (max. depending on choice of fan)
Power supply	24 V DC or 12 V DC
Pressure differential across filter	between 0.4 mbar and approx. 10 mbar
Material	Plastic version: PA66-GF30 Steel version: DC01
Service life of filter stages	max. 1 year, depending on application

1.5 STANDARD DESIGN

- plastic or steel housing
- with single-stage fan control
- without internal cab pressure monitoring
- without clogging indicator
- with PU seal (= polyurethane seal)
- without cable kit

1.6 SPECIAL DESIGNS AND ACCESSORIES

- without fan control
 - three-stage or automatic fan control
 - with monitoring of internal cab pressure
 - with internal cab display and control
 - with cable kit
 - with door contact switch
- Others on request!

1.7 SPARE PARTS

See original spare parts lists and operating instructions for the particular CabinAirCare unit. On request.

1.8 TEST OPTIONS

- On-site measurement of airborne pollutants at customer's premises
- In-house cab air test bench to DIN EN 15695-1
This specially developed cab test bench can be used to test mobile cabs for system suitability (e.g. leaktightness) and to certify them to DIN EN 15695-1 with a suitable filter system.

2. MODEL CODE (also order example)

2.1 CabinAirCare – agricultural (to DIN EN 15695)

2.1.1 Mounted on cab

CACRA AK 52 V 12 W 2.0 /-000 - HMI1 - KIDU1 - KK

Type

CACRA CabinAirCare – agricultural

Version

AK plastic housing, mounted on cab
AS steel housing, mounted on cab

Fan specification

40 Pressure Plus – basic (without controller – only for "AK" version)
41 Pressure Plus – 3stage (in 3 stages)
42 Pressure Plus – dynamic (automatic fan control)

3. FILTER ELEMENTS

3.1 Filter groups

Filter groups	Characteristics using the example of particles and gases removed by the filter	Letter code = filter classes EN 779/EN 1822	Recommended application
Coarse dust filter for particles > 10 µm	<ul style="list-style-type: none"> ● Insects ● Textile fibres and hair ● Sand ● Fly ash ● Pollen ● Spores, pollen ● Cement dust 	G3 G4*	Pre-filters and circulation air filters for civil defence facilities, exhaust from spray booths and kitchen extraction, etc. Pollution protection for air conditioning and compact units (e.g. window-type air conditioning units, fans)
Fine dust filter for particles 0.1 – 10 µm	<ul style="list-style-type: none"> ● Pollen ● Spores, pollen ● Cement dust ● Particles that cause staining or dust deposits ● Bacteria and germs on host particles 	M5 M6 F7*	Pre-filters and circulation air filters in central ventilation systems, final filters in air conditioning systems for offices and production facilities, control centres, hospitals, IT centres, pre-filters for active carbon filters
Combination of coarse and fine dust filters	Example: G4F7 = G4+F7		
HEPA filter for particles 0.1 – 1 µm	<ul style="list-style-type: none"> ● Oil vapour and soot in original state ● Germs, bacteria, viruses ● Airborne radioactive particles 	H12 H13*	Final filters for clean rooms to Class 100,000 or 10,000 Final filters for civil defence facilities, exhaust filters for nuclear installations
Nano-filtration	<ul style="list-style-type: none"> ● Absolute filtration of particles < 0.3 µm of > 99% 	NF	Absolute filters for the strictest demands for air in the cab
Gas filtration (active carbon element)	<ul style="list-style-type: none"> ● Gas filter in accordance with EN 15695-2 ● Other gases on request 	AK1* AK2	Category 4 cabs in accordance with EN 15695-1
Combination of HEPA filter and/or nano-filter and gas filter	Example: H13AK1 = H13+AK1		

* Preferred range

3.2 Type code – filter element CACRE – agricultural (DIN EN 15695)

CACRE F7 B1 /-400-132

Type

CACRE

Filter stage(s)

- F7 filter stage F7 (EN 779)
- H13 filter stage H13 (EN 1822)
- AK1 filter stage AK1 for Cat. 4 application (EN 15695-2)
- G4F7compact stage (comprising G4 and F7 – EN 779)
- F7H13AK1 compact stage (comprising F7, H13 and AK1 – Cat. 4 – EN 15695-2)

Element depth

- A 50 mm (only for on-cab mounting)
- B 100 mm

Coding

- 1-3 position in the on-cab mount version (see item 3.4)
- 3 general for in-cab version (in conjunction with cassette depth "B" = 100 mm)

Element length and height

-400-132

3.3 Type code – filter element CACRE – construction

CACRE G4 A1 /-400-132

Type

CACRE

Filter stage(s)

- G4 filter stage G4 (EN 779)
- M6 filter stage M6 (EN 779)
- F7 filter stage F7 (EN 779)

HYDAC

INTERNATIONAL

**Breathers and
Filler Breathers**

Your Professional Partner for Breathers and Filler Breathers.

HYDAC Quality.

HYDAC's filtration technology is the culmination of rigorous laboratory testing as well as practical field-testing. It offers a complete range of filters for liquid and gaseous media. The HYDAC Filter Division manufactures products tailored to market requirements and to the highest quality standards, backed by modern machinery and a large production capacity. HYDAC Filtration Technology is based on intensive basic research, technical problem solving, specific customer requirements, and international standardization.

HYDAC Products.

Our wide range of products, combined with our expertise in development, manufacturing, sales and service enables the widest range of requirements to be met worldwide.

Our quality and environment certification to ISO 9001/2000 and ISO 14001 denote first class quality and responsible management of our resources.

System solutions.

One supplier. One contact.

Wherever you need us, we are there to help you find the most effective solution – for every application, from components to a complete system.

HYDAC is represented in all industries.

For more than 50 years and with over 8,000 employees, 45 overseas subsidiaries and over 500 sales and service partners worldwide, we are in close contact with our customers, providing engineering advice, production, installation and service.

Core industries include:

Mobile Hydraulics:

- Construction Machinery
- Agricultural Machinery
- Municipal Machines
- Fork Lifts
- Mining Machinery

Industrial Hydraulics:

- Machine Tools
- Injection Moulding Machines
- Paper Industry
- Power Plant Technology
- Mining
- Automotive Industry
- Iron/Steel/Metal Production
- Oil and Gas Industry
- Wind Energy

The importance of top quality air filters.

Air filters are an essential component of every hydraulic system. They guarantee that the air drawn into the tank as a result of fluctuations in the oil level is filtered reliably.

Very often too little attention is paid to air filters, with disastrous consequences. They are seen as mass-produced items and are selected purely on price. This misapprehension can lead to inefficiency in the system and even to failure of components.

By using first class, cost-effective HYDAC breather filters, contamination is prevented from entering the system from the air – which means:
Longer life expectancy and availability for the whole system.

Top quality filter elements.

HYDAC air filter elements consist of high quality phenolic resin impregnated paper and provide a low-cost, yet very efficient protection against airborne contamination.

In contrast to the foam material elements, phenolic resin impregnated paper is resistant to water and therefore also ensures optimum component protection when water is drawn in.

HYDAC paper elements for air filters have a filtration rating of 3 µm at a separation value of $\beta = 500$. This corresponds to a retention rate of 99.5% for particles of 2 µm and 100% for particles of 3 µm.

Recommendations.

Higher specifications for cleanliness of the operating fluid result in increased demands on the filtration concept used. Accordingly, HYDAC recommends selecting an air filter that has at least the same filtration rating as the finest system filter in the hydraulic circuit.

The following changing intervals are recommended:

For air breathers without clogging indicator:

Please change your air filter every 6 months or at every service interval.

For air breathers with clogging indicators:

Please change your air filter at 0.2 pressure drop since a higher pressure drop could lead to cavitation at the pump.

Special features of the filter housing.

The durable HYDAC air filter housings are made from strong metal or glass fibre reinforced polyamide (PA6). They are particularly appropriate for the punishing demands of mobile applications.

Options:

HYDAC's unique anti-splash feature prevents oil from splashing out of the tank via the breather filter (e.g. when the mobile machine is in driving mode) (not available for BF 8 and 9 or BF/ELF 3 and 4).

Visual clogging indicator (available for BF 7, 8 and 9)

Dipstick (only on BF 10, 30)

Integrated check/bypass valve for pressurized tanks (not for BF/ELF 10, 30 and 5)

Custom thread (available on BF 7, 10 and 30) and cap with company logo (available for BF/ELF 7, 10 and 30)

Anti-splash protection

Visual clogging indicator

BF 10 with dipstick

Cap with company name / company logo

Custom thread

Breather filters and dryers.

Drymicron breather filters and dryers prevent contamination particles and water vapour from entering the tank (see "Breather Dryer BDL/BDM" and "BDE" sections of the Filter Catalogue).

Tank Breather Filter BF up to 11000 l/min

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

Breather filter sizes 4, 10, 3 and 30 consist of a housing which is screwed onto the oil tank, and a built-in filter element.

Sizes 5, 52, 7 and 72 have housings which are screwed onto the oil tank and have one or two exchangeable filter element(s).

BF 5 and 52 are fitted with a built-in oil mist trap as standard.

Sizes 8 and 9 consist of a flange for mounting to the tank, an exchangeable element and a cap. The BF 9 also has an oil mist trap which allows the oil to be drained via an oil drain plug.

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Contamination retention capacities in g

	Paper

2.5 BREATHER FILTER WITH MANUAL PRESSURE RELIEF BFPR

TECHNICAL DESCRIPTION

Breather filters with manual pressure release "BFPR" consist of a housing which is screwed onto the oil tank and which has an integrated air filter element.

An integrated valve allows the oil tank to be pressurized to different pressures, for example to support the pump during start-up, thereby avoiding cavitation of the pump.

The manual pressure release function enables complete pressure release which is initiated when the pressure release button is pressed. This pressure release is required for example before carrying out maintenance on the tank and connecting pipes or hoses, to prevent potential accidents or injury by opening a pressurised system.

CAUTION:

This filter must not be used as a safety valve!

Max. flow rate: 200 l/min
Weight: 0.22 kg

Curves and further information on request.

DIMENSIONS

2.5 BREATHER FILTER BF 6 – INTEGRATED CHECK VALVE OPTION AVAILABLE

TECHNICAL DESCRIPTION

The latest breather filter development from HYDAC is the BF 6.

The BF 6 can be fitted with a hydrophobic filter element ("DRY") with an ~ 1,500 cm² filter surface, thus removing any water spray.

Option available with four integrated check valves to enable tank pre-charging – even at different pressure settings.

- Max. flow rate: 500 l/min
- Material: plastic (PA 6)
- Sealing material: NBR; HNBR
- Filter material: hydrophobic material (DRY) or material impregnated with phenol resin (P)
- Connections: G 3/4 (inner)
- Weight: 0.3 kg

Please contact us for further information and characteristics!

DIMENSIONS

3. FILTER CALCULATION / SIZING

3.1 SINGLE PASS FILTRATION PERFORMANCE DATA FOR AIR FILTER ELEMENTS

The following separation values were established under real-life simulated conditions.

This means that the selected velocity of the flow against the filter mesh-pack was 20 cm/s and the contamination added was 40 mg/m³ of ISO MTD test dust.

Filtration rating	Retention value d...	For particle size	Filter material
3 µm	d 80	0.74 µm	Paper
	d 100	2.64 µm	
10 µm	d 80	0.25 µm	BN
	d 100	0.84 µm	

The d 80 value refers to the particle size which is filtered out at a rate of 80% during the retention test.

The particle size determined by this method is called the nominal filtration rating of the air filter. The d 100 value therefore refers to the particle size which is filtered out at a rate of 100% during the single pass test.

The particle size determined by this method is called the absolute filtration rating of the air filter.

Table of average dust concentrations in real life:

Urban regions with a low level of industry	3-7 mg/m ³ air
General mechanical engineering	9-23 mg/m ³ air
Construction industry (wheeled vehicles)	8-35 mg/m ³ air
Construction industry (tracked vehicles)	35-100 mg/m ³ air
Heavy industry	50-70 mg/m ³ air

3.2 DIFFERENTIAL PRESSURE ACROSS BREATHER FILTER

The differential pressure (with clean element) for the various filter sizes is shown in the graphs under Point 3.4.

3.3 SIZING GUIDELINES

The rate at which contamination enters a hydraulic system can be considerably reduced by using efficient tank breather filtration.

Caution:

Incorrectly sized tank breather filters can place additional strain on the system and reduce the service life of hydraulic filter elements.

For optimum sizing the following should therefore be observed:

- Filtration rating of breather filter ≤ filtration rating of hydraulic filter
- Only use breather filters with an absolute retention rate ($d_{100} \leq x \mu\text{m}$; x = given filtration rating)
- Max. permitted initial pressure loss: 0.05 bar, optionally 0.01 bar (with a clean filter element and calculated air flow rate)
- Determining the calculated air flow:
 $Q_A = f_5 \times Q_p$
 Q_A = calculated air flow in l_N/min
 f_5 = factor for operating conditions
 Q_p = max. flow rate of the hydraulic pump in l/min

Ambient conditions	Factor f5
Low dust concentration; filter fitted with clogging indicator; continuous monitoring of the filter	1-2
Average dust concentration; filter without clogging indicator; intermittent monitoring of the filter	3-6
High dust concentration; filter without clogging indicator; infrequent or no monitoring of the filter	7-10

3.4 AIR FLOW RATE

BF 9

Pressure drop curves for BF filters with check/bypass valve (version /-RV...) on request.

4. DIMENSIONS

Tank requirements

1. In the filter contact area, the tank flange should have a maximum flatness of 0.2 mm and Ra 3.2 µm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.

Tank Breather Filter with Filler Strainer ELF up to 5500 l/min

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

Tank breather filters size 4, 10, 3 and 30 consist of an air filter top, which is connected to the mounting flange by a bayonet plate or a threaded boss, and a filler strainer.

Sizes 5 and 52 consist of a two-part threaded air filter top, with built-in oil mist trap, one or two exchangeable filter element(s) and a filler strainer.

Sizes 7 and 72 consist of a two-part flanged filter top, an exchangeable filter element and a filler strainer.

1.2 FILTER ELEMENTS

Contamination retention capacities in g

	Paper
ELF	3 µm
4	2.9
10	2.9
3	6.2
30	6.2
7	26.1
72	52.2
5	85.1
52	170.2

The filter elements are made from phenolic resin impregnated paper and cannot therefore be cleaned.

1.3 FILTER SPECIFICATIONS

Temperature range	-30 °C to +100 °C
Material of housing	Steel, zinc-plated/plastic coated (ELF 4, 3), steel (ELF 5, 52) glass fibre reinforced synthetic material (ELF 10, 30, 7, 72)
Material of filler strainer	Synthetic: ELF 10, 4, 30, 3, 7, 72 Metal: ELF 5, 52
Type of clogging indicator	VMF (return line indicator)
Pressure setting of clogging indicator	0.6 bar K pressure gauge 0.035 bar UBM indicator (others on request)

1.4 SEALS

NBR (= Perbunan) on filter
NBR / Polyurethane on element
Cardboard on mounting flange

1.5 SPECIAL MODELS AND ACCESSORIES

- lockable model (only ELFL 3)
- with check/bypass valve to support the suction characteristics of the pump Not 100% air-tight or leakage-free! (only ELF 10, 3, 30, 5 and 52)
- with anti-splash device (only ELF 10, 3, 30, 7, 72)
- with connection for a clogging indicator (only ELF 7, 72)
- with filler adapter for automotive applications (only ELF 7 and 72) - see Point 5.

1.6 SPARE PARTS

See Original Spare Parts List

1.7 CERTIFICATES AND APPROVALS

3. FILTER CALCULATION / SIZING

3.1 SINGLE PASS FILTRATION PERFORMANCE DATA FOR AIR FILTER ELEMENTS

The following separation values were established under real-life simulated conditions.

This means that the selected velocity of the flow against the filter mesh-pack was 20 cm/s and the contamination added was 40 mg/m³ of ISO MTD test dust.

Filtration rating	Retention value d...	For particle size	Filter material
3 µm	d 80	0.74 µm	Paper
	d 100	2.64 µm	

The d 80 value refers to the particle size which is filtered out at a rate of 80% during the retention test. The particle size determined by this method is called the nominal filtration rating of the air filter. The d 100 value therefore refers to the particle size which is filtered out at a rate of 100% during the single pass test. The particle size determined by this method is called the absolute filtration rating of the air filter.

Table of average dust concentrations in real life:

Urban regions with a low level of industry	3-7 mg/m ³ air
General mechanical engineering	9-23 mg/m ³ air
Construction industry (wheeled vehicles)	8-35 mg/m ³ air
Construction industry (tracked vehicles)	35-100 mg/m ³ air
Heavy industry	50-70 mg/m ³ air

3.2 DIFFERENTIAL PRESSURE ACROSS BREATHER FILTER

The differential pressure (with clean element) for the various filter sizes is shown in the graphs under Point 3.4.

3.3 SIZING GUIDELINES

The rate at which contamination enters a hydraulic system can be considerably reduced by using efficient tank breather filtration.

CAUTION:

Incorrectly sized tank breather filters can place additional strain on the system and reduce the service life of hydraulic filter elements.

For optimum sizing the following should therefore be observed:

- Filtration rating of breather filter = filtration rating of hydraulic filter
- Only use breather filters with an absolute retention rate (d100 = x µm; x = given filtration rating)
- Max. permitted initial pressure drop: 0.01 bar (with a clean filter element and at calculated air flow)
- Determining the calculated air flow:

$$Q_A = f5 \times Q_p$$

$$Q_A = \text{calculated air flow in l}_N/\text{min}$$

$$f5 = \text{factor for operating conditions}$$

$$Q_p = \text{max. flow rate of the hydraulic pump in l/min}$$

Ambient conditions	Factor f5
Low dust concentration; filter fitted with clogging indicator; continuous monitoring of the filter	1-2
Average dust concentration; filter without clogging indicator; intermittent monitoring of the filter	3-6
High dust concentration; filter without clogging indicator; infrequent or no monitoring of the filter	7-10

4. DIMENSIONS

Tank requirements

1. In the filter mounting interface, the tank flange should have a maximum flatness of 0.2 mm and Ra 3.2 μm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter.
4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.

Breather Dryer BDE

1. TECHNICAL SPECIFICATIONS

1.1 DEFINITION OF THE PROBLEM

In hydraulic and lubrication systems, water ingress into the tank is a familiar problem. System operators are constantly faced with high breakdown and maintenance costs that can be traced back to water in the system. This is because water, even in its dissolved state, causes accelerated degradation of the additive components by hydrolysis. These reactions cause the oil to lose its desired characteristics and to age more rapidly. The depletion of the additives also leads to increased oxidation in the base fluid.

Water also has serious and adverse effects on the operating system components, damaging them by corrosion and hydrogen embrittlement.

1.2 FILTER HOUSING Construction

The distinctive feature of the breather dryers BDE is that it has two separate chambers which can be filled with two desiccants, which in combination increase total water retention (two-stage dewatering).

As an option, and as a special protection of the desiccant, four valves are built into the bottom of the unit so that during system shutdown the desiccants will not become saturated.

A check valve is available as an option to prevent exhaust air from the tank/ transmission from flowing back through the desiccant. This means the desiccant is protected from oil mist and there is no re-drying of the exiting air.

1.3 FILTER MEDIUM

The built-in pleated air filter element (absolute filtration of particles > 2 µm) provides the filter with a very high contamination retention capacity (26g). In order to ensure reliable function, the entire cartridge must be replaced. When the filter is due to be changed, the colour changes from dark red to light orange.

1.4 FILTER SPECIFICATIONS

Temperature range	-30 °C to +100 °C
Storage temperature:	-40 °C to +100 °C
Material of filter housing	Plastic (PA, PC and POM)
Material of filter cartridge unit	Combination of 2 different desiccants
Material of air filter element	phenolic resin impregnated paper

1.5 SEALS

Breather Dryers BDL, BDM

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The inline version BDL and the breather dryer BDM consist of a filter cartridge only, which is non-replaceable.

1.2 GENERAL

The breather dryer cartridges are filled with silica gel (orange) which, once completely saturated, cannot be regenerated.

A durable contamination filter above and below the silica gel prevents contamination from penetrating inside the cartridge (particle filtration > 2 µm nominal).

This ensures optimum humidity absorption.

To guarantee the performance of the protective filter layers, the entire cartridge must be replaced.

When the filter is due to be changed, the colour changes from orange to green.

1.3 FILTER SPECIFICATIONS

Temperature range	-32 °C to +100 °C
Material of filter cartridge	Plastic with silica gel filling (orange)

1.4 SEALS

3. FILTER CALCULATION / SIZING

3.1 SINGLE PASS FILTRATION PERFORMANCE DATA FOR AIR FILTER ELEMENTS

The following separation values were established under real-life simulated conditions.

This means that the selected velocity of the flow against the filter mesh-pack was 20 cm/s and the contamination added was 40 mg/m³ of ISO MTD test dust.

Filtration rating	Retention value d...	For particle size	Filter material
10 µm	d 80	0.25 µm	BN
	d 100	0.84 µm	
20 µm	d 80	0.36 µm	P
	d 100	1.21 µm	
10 µm	d 80	1.49 µm	P
	d 100	9.56 µm	

The d 80 value refers to the particle size which is filtered out at a rate of 80% during the retention test.

The particle size determined by this method is called the nominal filtration rating of the air filter. The d 100 value therefore refers to the particle size which is filtered out at a rate of 100% during the single pass test.

The particle size determined by this method is called the absolute filtration rating of the air filter.

Table of average dust concentrations in real life:

Urban regions with a low level of industry	3-7 mg/m ³ air
General mechanical engineering	9-23 mg/m ³ air
Construction industry (wheeled vehicles)	8-35 mg/m ³ air
Construction industry (tracked vehicles)	35-100 mg/m ³ air
Heavy industry	50-70 mg/m ³ air

3.2 DIFFERENTIAL PRESSURE ACROSS BREATHER FILTER

The differential pressure (with clean element) for the various filter sizes is shown in the graphs under Point 3.4.

3.3 SIZING GUIDELINES

The rate at which contamination enters a hydraulic system can be considerably reduced by using efficient tank breather filtration.

CAUTION:

Incorrectly sized tank breather filters can place additional strain on the system and reduce the service life of hydraulic filter elements.

For optimum sizing the following should therefore be observed:

- Filtration rating of breather filter = filtration rating of hydraulic filter
- Only use breather filters with an absolute retention rate (d100 = x µm; x = given filtration rating)
- Max. permitted initial pressure drop: 0.01 bar (with a clean filter element and at calculated air flow)
- Determining the calculated air flow:
 $Q_A = f5 \times Q_p$
 Q_A = calculated air flow in l_N/min
 $f5$ = factor for operating conditions
 Q_p = max. flow rate of the hydraulic pump in l/min

Ambient conditions	Factor f5
Low dust concentration; filter fitted with clogging indicator; continuous monitoring of the filter	1-2
Average dust concentration; filter without clogging indicator; intermittent monitoring of the filter	3-6
High dust concentration; filter without clogging indicator; infrequent or no monitoring of the filter	7-10

3.4 AIR FLOW RATE

BL 82

BL 162

4. DIMENSIONS

Tank requirements

1. In the filter mounting interface, the tank flange should have a maximum flatness of 0.2 mm and Ra 3.2 µm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter. As an alternative, the tank flange can be continuously welded from the inside.
4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.

TankConditioner® TC with Breather Filter, Float Switch and Temperature Monitoring System

1. TECHNICAL SPECIFICATIONS

1.1 UNIT CONSTRUCTION

The TankConditioner® TC is a multi-functional unit consisting of a fluid level and temperature monitoring system, an optional temperature display and a breather filter BF7 or BF 72.

1.2 FLUID LEVEL MONITORING

Values are measured using the float principle. For simple monitoring functions (e.g. pump protection or tank level monitoring) the fluid level monitoring device has two bistable switch contacts which can be turned through 180° for either N/O or N/C function.

A resolution of 10 mm makes it easy to set the switch points to suit the requirements of the system. The switch points can also be displayed via 3 LEDs (green, yellow, red), if specially requested by the customer.

Depending on the type of unit, the actual oil level can also be output as an analogue control signal for system control.

Oil level monitoring is maintenance-free for fluids which do not form a residue on the sensor tube during operation.

1.3 FLUID TEMPERATURE MONITORING

The thermal contact required for this is fitted to the end of the contact strip and therefore monitors the oil temperature in the lower part of the tank.

The normally closed contact responds at 70 °C and acts as an emergency cut-out.

If switching functions are to be carried out in conjunction with temperature monitoring (to control an oil cooler, for example) then, depending on the model, up to 2 PNP switch outputs can either be programmed hysteresis-free from 0-100 °C, or can be output as an analogue control signal.

1.4 TANK BREATHER FILTER

To meet the most likely customer requirements, the TankConditioner® TC is fitted with the BF 7 or BF 72 breather filter as standard.

The breather filter is designed in such a way that it is impossible to fill or top up the tank with hydraulic fluid via the filter housing (exception: version FABF). The TankConditioner® TC can be supplied without a port for a clogging indicator or with a visual-analogue clogging indicator. To make the breather filter even more maintenance-friendly, we recommend fitting a UBM type clogging indicator, which is easily visible and includes a memory function. The yellow reset button is used to reset the indicator after changing the element.

1.5 GENERAL TECHNICAL SPECIFICATIONS

Flange connection	DIN 24557/ Part 2: mounting hole Ø61
Installation position	vertical ±30°
Operating voltage	12V ... 30V DC
Electrical connection	Male: Series M12x1/ 4-pole IP67 For type S44 screened cables must be provided by the customer!
Filter element	3 µm
Air flow rate	BF 7: max. 900 l _N /min BF 72: max. 1200 l _N /min
Sensor tube / float / protective sleeve (option)	synthetic material / brass (optional stainless steel)
Nominal pressure	max. 1 bar
Temperature of fluid	max. 100 °C

Flange connection to DIN 24557 / Part 2

For pin assignment see Point 3. Dimensions

For further information, please see Point 3.

1.6 TANK FILLING OPTION

For simple applications the tank can be filled via the breather filter (see Supplementary Details code FABF). To protect the hydraulics a filler-strainer is built into the tank flange as a coarse filter. For high performance hydraulic systems we recommend the filling connection which allows the filling of filtered oil to be monitored (Supplementary Details FA34). The required quick release coupling is not supplied.

1.7 FILTER ELEMENTS

Contamination retention capacities in g

	Paper
BF	3 µm
7	26.1
72	52.2

1.8 SEALS

NBR (= Perbunan)
NBR and cork for version FA34

1.9 WAVE MOTION PROTECTION

Wave motion on the surface of the oil can affect the float and can therefore cause measurement errors, particularly in large tanks. A protective sleeve is therefore available in brass (type code 1.x) or stainless steel (type code 2.x) as an accessory for these applications.

1.10 FLOAT

To ensure compatibility with many standard hydraulic fluids, the TankConditioner® TC sensor tube and float are made from synthetic material and brass, with stainless steel as an option.

1.11 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

Brass version:

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743

Return Line Filter RFM with 2-Hole Mounting

Tank-top versions: up to 200 l/min, up to 10 bar

In-tank versions: up to 2,600 l/min, up to 10 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head (with 2-hole flange), filter bowl and a screw-on cover plate.

Standard equipment:

- with bypass valve
- connection for a clogging indicator (Important: for RFM 75 to 195, please state mounting position for indicator!)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943
ISO 3724, ISO 3968, ISO 11170
ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Ecomicon® (ECON2):	10 bar
Wire mesh (W/HC):	20 bar
Paper (P/HC):	10 bar
Betamicon® / Aquamicon® (BN4AM):	10 bar
Aquamicon® (AM):	10 bar
Mobilemicon® (MM):	10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	10 bar
Temperature range	-30 °C to +100 °C (short-term: -40 °C)
Material of filter head	Aluminium: all RFM
Material of filter bowl	Polyamide: all RFM except 210, 270
Material of cover plate	Polyamide: all RFM
Type of clogging indicator	VMF Connection thread G 1/8 (return line indication)
Pressure setting of the clogging indicator	2 bar (others on request)
Bypass cracking pressure	3 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 MOUNTING

Tank-top or in-tank filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Extension tube (except RFM 90, 150) on request
- Tank breather filter built into head on RFM 75 to 195
- Dipstick for RFM 75, 165, 185, 195 (RFM 90 and 150 on request)
- 4-hole flange (see brochure "Return Line Filter RFM with 4-hole mounting")

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

On request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector
- If an extension tube is to be fitted to the two-piece filter housing, the tube must be made of synthetic material or thin-wall aluminium
- Extensions must be protected by fitting a bulkhead plate or other means of protection so that no forces can be transmitted to the filter housing or the extension
- The filter can normally only be used for tank-mounting
- The filter must be fitted absolutely vertically, or after consultation with the manufacturer, only within the tolerances specified
- The filter must not be used as a suction filter
- Components (e.g. coolers) must not be installed after the filter

 V FPM seal
 Vxxx extension tube (where xxx is the final dimension of the extension)

Note:

- Other supplementary details on request (or point 2.1)
- For replacement elements for in-tank filters, see point 2.2

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = see graphs (point 3.1)

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Configuration Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

RFM 90, 150

RFM 75, 165, 185

RFM 195

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

4. DIMENSIONS

Tank requirements

1. In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and Ra 3.2 µm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter. As an alternative, the tank flange can be continuously welded from the inside.
4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.
5. When using a dipstick through a mounting screw, threadlock the screw into the thread, using Loctite 243, for example, or a similar threadlocker.

Return Line Filter RFM with 4-Hole Mounting

Tank-top mounted versions:
up to 850 l/min, up to 10 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head (with 4-hole flange), filter bowl and a screw-on cover plate.

Standard equipment:

- with bypass valve
- connection for a clogging indicator (Important: please state mounting position for indicator!)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Ecomicon® (ECON2):	10 bar
Wire mesh (W/HC):	20 bar
Paper (P/HC):	10 bar
Betamicon® / Aquamicron® (BN4AM):	10 bar
Aquamicron® (AM):	10 bar
Mobilemicron® (MM):	10 bar

2.4 PORT CONFIGURATION RFM 600

Since there are numerous options for machining the ports on the head of the RKM 600, the code BZx is selected here as standard.

In order to determine the position and size of the ports, a 5-letter code is added as supplementary detail. This is determined using the table below. Unused ports are indicated by a "0".

for RFM 600...BZK

Port	A1	A2	A3	A4	A5
G 3/4					C
G 1				D	
G 1 1/4	E	E	E		
SAE DN 40	K	K	K		
plugged	0	0	0	0	0

for RFM 600...BZL

Port	A1	A2	A3	A4	A5
G 3/4					C
G 1				D	
G 1 1/2	F	F	F		
SAE DN 50	L	L	L		
plugged	0	0	0	0	0

Example:

RFM BN/HC 600 BZL 10 A 1.0 /-0FL0C

NOTE
Other type codes on request.

2.6 RETURN LINE FILTERS RFM ALL-PLASTIC

The RFM All-Plastic filter provides a cost-effective alternative to the standard RFM product range.

This filter is an all-plastic version with a simple hose connection as the return line port.

The well-known HYDAC element technology is of course available for these filter types

Nominal pressure: 7 bar
Flow rate up to 100 l/min
Temperature range: -30 °C to +100 °C

Δp-Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s.

In this case, the differential pressure changes proportionally to the density.

Model Code

	RFMP	ON	165	Y	HB	10	A	1	.X	/-4L-B6

DIMENSIONS

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

4. DIMENSIONS

Tank requirements

1. In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and Ra 3.2 μm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter. As an alternative, the tank flange can be continuously welded from the inside.
4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.
5. When using a dipstick through a mounting screw, threadlock the screw into the thread, using Loctite 243, for example, or a similar threadlocker.

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a housing tube, filter cover plate and an element location spigot.

The element is top-removable.

Standard equipment:

- bypass valve
- magnetic core built into cover plate
- element location spigot

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Return Line Filter RPER

Element flow direction from in to out
In-tank versions:
up to 300 l/min, up to 10 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a housing tube, filter cover plate and an element location spigot.

The element is top-removable.

Standard equipment:

- bypass valve
- magnetic core built into cover plate
- protective tube (perforated plate)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Contamination retention capacities in g

Return line and Suction Boost Filter RKM up to 850 l/min, up to 10 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head, filter bowl and a screw-on or bolt-on cover plate.

Standard equipment:

- with bypass valve
- with back-pressure valve
- without anti-cavitation valve

Application

RKM return line & suction boost filters are ideally suited for use in equipment with two or more circuits. In particular this filter is the "first choice" for mobile machinery using hydrostatic drives (e.g. wheel loaders, fork-lift trucks, harvesting machines), if the return flow is greater than the flow required on the suction side under operating conditions.

Function

The return flow of the operating hydraulics is supplied to the filter via one or several inlets "A" and is cleaned by the filter element (full flow return line filtration). A pressure of 0.5 bar (standard) is applied inside the element by the back-pressure valve "V1".

This ensures that the filtered return line flow is available to the hydrostatic feed pumps connected in "B" ports (full flow suction boost filtration). The risk of cavitation is significantly reduced. The excess flow is drained to the tank via port "T". A bypass valve "V2" (standard = 2.5 bar) is fitted to relieve excessive back-pressures in the element (important on cold starts when viscosity is high). This valve arrangement ensures that only finely filtered oil is available to the suction port during operation (exception: RKM 350).

With optional valve "V3", oil can be drawn from the tank for short periods, e.g. initial filling, venting after changing element.

1.2 FILTER ELEMENTS

The filter elements used in RKM filters are notable for low back-pressures, especially at high viscosities (e.g. cold starts).

1.3 FILTER SPECIFICATIONS

Nominal pressure	10 bar
Temperature range	-30 °C to +100 °C (short-term: -40 °C)
Material of filter head	Aluminium
Material of filter bowl	Steel (all RKM except RKM 300) Polyamide (RKM 300)
Material of cover plate	Polyamide (RKM 80 to 251, 350) Aluminium (RKM 300, 400, 800)
Type of clogging indicator	VMF – Connection thread G 1/8
Pressure setting of the clogging indicator	-0.2 bar (vacuum pressure) 2 bar (back-pressure) (others on request)
Bypass cracking pressure (V2)	2.5 bar (others on request)
Setting for back-pressure valve (V1)	0.5 bar (others on request)

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Mobilemicron® (MM): 10 bar

1.4 SEALS

Perbunan (=NBR)

2.4 PORT CONFIGURATION RKM 80 TO 251 MULTI-PORT HEAD AND RKM 400 AND 800

Since there are numerous options for machining the ports on the multiport head and the head of the RKM 400/800, the general code BZZ is selected here. In order to determine the position and size of the ports, a 5-digit or a 9-digit code is added as a supplementary detail. This is determined using the table below. Unused ports are indicated by a "0".

R = return port; S = suction port

Port configuration RKM 80, 100, 120 Multiport

Position in code	1	2	3	4	5
Connection	R1	R2	R3	S1	S2
G 1/2		(B)	(B)	B	B
G 3/4	(C)	C	C	(C)	(C)

Special port		Z	Z	Z	Z	Z	Z	Z	Z

Example: RKM MM 400 BZZ 15 A 1.0 /-102CC2200

2.5 PORT CONFIGURATION RKM 151, 201, 251 WITH THERMAL BYPASS VALVE

The part flow which requires cooling can be directed via separate ports via the thermal valve. During a cold start, the spool of the thermal valve shuts off the flow to the cooler so that the fluid flows directly through the filter element. The position of the spool is regulated by the oil temperature. From approx. 50-60 °C the inlet to the cooler is completely open (diagram 1).

Alternative connection option according to diagram 2: A hose connects the inlet line of the cooler to the thermal valve. The connection configuration is determined by agreement with the customer.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

RKM	MM		
	8 μm	10 μm	15 μm
80	2.70	2.70	1.60
100	1.80	1.80	1.10
120	1.40	1.40	0.90
151	1.00	1.00	0.65
201	0.75	0.75	0.47
251	0.58	0.58	0.36
300	0.62	0.62	0.39
350	0.30	0.30	0.20
400	0.56	0.56	0.35
800	0.44	0.44	0.27

3.2 Δp -Q HOUSING CURVES INCLUDING ELEMENT BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

4. DIMENSIONS

RKM 80, 100, 120

Tank requirements

1. In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and Ra 3.2 µm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter.

As an alternative, the tank flange can be continuously welded from the inside.

4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.
5. When using a dipstick through a mounting screw, threadlock the screw into the thread, using Loctite 243, for example, or a similar threadlocker..

Return Line Suction Boost Filter RKM. The New Generation.

Optimized for service. Optimized for efficiency. Quality protected.

Space saving

the need for at least one filter is eliminated

Reduced maintenance costs

reduces maintenance by at least half

First class component protection

excellent filtration efficiency of the filter element which is optimized for cold starts

Increased operating reliability

new High Efficiency filter element technology

Warranty security

individual branding

The New Generation: The New Optimum.

First class pump protection

cavitation is reliably prevented

Flexible use

numerous connection options

Improved ease of maintenance

new design optimized for service

Long service life

high contamination retention

Guaranteed HYDAC quality

thanks to HYDAC Quality Protection

Your Professional Partner for Mobile Applications.

With over 8,000 employees worldwide, HYDAC is one of the leading suppliers for fluid technology, hydraulic and electronic equipment.

With 45 overseas companies and over 500 sales and service partners we are a global player.

Our wide range of products, combined with our established expertise in all aspects of mobile machines, ensures HYDAC is qualified to be your professional partner for the mobile sector. Especially in the area of hydraulic filtration, you will benefit from decades of HYDAC experience and development successes.

Our quality and environment certification to ISO 9001/2000 and ISO 18001 denote first class quality and responsible management of our resources.

All from one supplier.

HYDAC will help find the solution for you!

From first class components right up to turnkey system solutions, from support during commissioning to maintenance and optimization, from professional filtration, to oil condition monitoring and expert cooling.

First class laboratory and testing expertise in the HYDAC Technical Centre

The new Technical Centre, specifically designed for filters and filter monitoring, is equipped with the most up-to-date instruments and test rigs. It offers a huge range of options for fluid analysis and filtration efficiency tests.

In our new laboratories, highly qualified staff are dedicated to continuously improving products and developing applications as well as carrying out analyses to customer specification – always tailored to the particular operating conditions.

In addition to the central facility at our headquarters there are further laboratories and mobile fluid laboratories in several HYDAC centres in Germany and overseas.

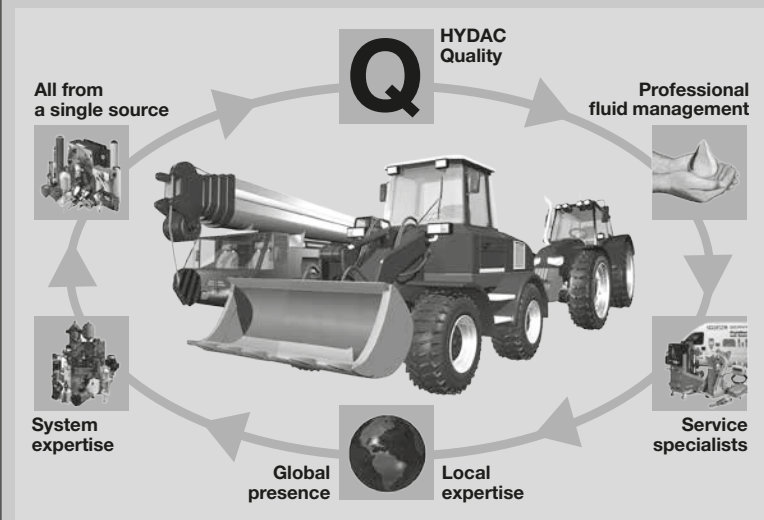

Just one example of the numerous filter testing procedures: **Multipass test rig.**

Oil analysis in the HYDAC laboratory at company headquarters.

With Us, You and Your Fluids are in the Safest Hands.

The specialists at HYDAC have a good knowledge of your fluid and welcome the opportunity to help you reduce the burden of fluid service. You will see for yourself the clear benefit of having a hydraulic or lubrication system that works perfectly, leaving you to concentrate fully on your area of expertise.

When you have decided on a HYDAC filter concept for your mobile machine, you are not "just" buying a filter, but are benefitting at the same time from the HYDAC network of expertise and service, available worldwide:

Highest level of operating reliability for mobile applications.

In HYDAC you have a professional partner for all aspects of fluid cleanliness

This product overview shows just a single filter type. The whole filter range from HYDAC covers approximately fifty other types – the majority of which have been developed for mobile applications. In addition, new individual solutions are constantly being developed, partly in active development partnership with the manufacturers.

HYDAC filters offer you the following advantages.

Low costs

the filter elements and housings are optimized for the mobile sector

Easy maintenance

simple element change and easy-to-install filter housing

High level of operating reliability

filter media have high filtration efficiency for exceptional cleanliness classes and benefit from a high level of production quality

Low operating costs

particularly low pressure drops across filter and filter element for low energy consumption

All components and systems from one company

providing comprehensive system know-how and integrated system approach

Worldwide availability and advice

provided by our worldwide network of regional offices, agents and service partners

Protection of the spare part business

thanks to special features such as "Brand Labelling" and "Quality Protection"

Return Line Suction Boost Filter RKM.

Filter housing optimized for service.

Never before has the RKM been so easy to service:

The element is, as previously, lifted with the filter bowl out of the ...tank-mounted head of the filter.

What's new is that the element is now firmly screwed **to the bowl**.

It will not become loose and can be lifted out smoothly. In addition, the

convenient removal handle makes for a clean and easy element change.

Special advantage: the optional patented oil drain valve opens automatically to the tank when the filter cover plate is opened.

Customer benefits of the new generation:

Improved ease of maintenance no risk of injury

since the element is securely attached to bowl and a convenient removal handle is provided

Cleaner element change

element firmly attached to bowl and automatic oil drain valve available (as an option)

Patented oil drain valve.

Element with removal handle.

Filter elements optimized for efficiency.

In the Return Line & Suction Boost Filter RKM special "Mobilemicron"

filter elements have always been used which have an exceptionally good pressure drop characteristic.

In other words, for the same ambient conditions and flow rate, Mobilemicron elements produce significant lower Δp than comparable hydraulic elements.

For the new generation we have gone one better: **Mobilemicron elements in a High-Efficiency version** achieve particularly high separation rates. That means **still greater efficiency** for these already highly efficient Mobilemicron filter elements.

Customer benefits of the new generation:

Excellent component protection and increased machine availability due to the outstanding filtration efficiency of the new High Efficiency elements

Protection of the shaft seals of the hydrostatic drive particularly low pressure drop across the element (especially during cold start)

Mobilemicron filter elements.

High-efficiency graph.

Quality Protection.

The new RKM is equipped with a "Quality Protection solution".

The anti-copying measures built into the top quality original elements prevent counterfeit elements being fitted.

In addition, the RKM elements can of course be overprinted as usual with your company logo (Brand labelling).

Overprinting also supports the exclusive use of original elements.

Customer benefits of the new generation:

Outstanding quality of the replacement element and with that, long service life of element and components, guaranteed cleanliness and high level of operating reliability

Safeguarding of the spare parts business particularly for OEMs

Guaranteed spare part quality and therefore oil cleanliness in respect of warranty claims

Quality Protection. (Integrated anti-copying design)

Brand Labelling. (Element with customer logo)

The New Generation: Optimized for Service.

A filter crammed with cutting-edge technology.

The new RKM has not only been optimized in terms of service, efficiency and quality, but it also triumphs in terms of other beneficial refinements.

On this double page you will see the choice of possible RKM configurations. Each of the versions illustrated is the result of a specific customized solution. In other words, these are not "off the shelf" products but have developed from specific requests from the mobile sector.

The result is a range with matchless flexibility and a wealth of ideas. Further details can be found in the current brochure no. 7.108.2..

Needless to say, with the varied RKM standard range as your starting point, there is always the option of developing new RKM solutions individually tailored to your application and requirement profile. Please view this selection as a "appetizer" and let us know what solutions you are seeking.

Head of RKM 85 - 125 Multiport.

Head of RKM 155 - 255 Multiport.

Variety of connections with RKM Multiport.

RKM 85 – 255 and 405 – 805 Variety of connections with "RKM Multiport".

Almost all RKM sizes are available with a Multiport filter head. The huge number of possible combinations of return line and suction boost connections and the different port positions means that the filter can be quickly configured to suit individual customers.

For sizes 405 and 805 there are for example nearly 200,000 (!) versions available (see table below).

Particular advantages of having variety of connections:

- **Space and cost saving**
- **Reduction in components**
Need for blocks, hoses and threaded connections is eliminated
- **Reduced risk of leakage**
- **Great flexibility**

Connection	Return lines			Suction lines					
	R1	R2	R3	S4	S5	S6	S7	S8	S9
SAE DN 50	✓	x	x	x	x	x	x	x	x
SAE DN 65	✓	x	x	x	x	x	x	x	x
G 1	x	✓	✓	✓	✓	✓	✓	✓	✓
G 1¼	x	✓	✓	✓	✓	✓	✓	✓	✓
G 1½	x	✓	✓	✓	✓	✓	✓	✓	✓

Connection options for return lines and suction lines.

RKM 155 – 305 with Cost-Saving connection "CS".

The patented CS connection is designed to speed up and simplify the mounting of hoses by using just four screws supplied with the filter.

Particular advantages of this version:

- **Simplified installation**
Whereas in the case of conventional SAE flanges four screws, four washers and two installation fittings are required per hose connection, the CS connection does not require any other additional installation fitting.
- **Improved cold start performance**
compared to standard threaded connections, due to lower pressure drop on suction side.

Advantageous cost-saving connection.

Optimized for efficiency. Quality protected.

RKM 155 – 255 with thermal bypass valve

For the RKM 155 - 255, a temperature controlled cooler bypass valve can be built directly into the filter head, on request. This "intelligent" valve varies the volume of the fluid to be cooled depending on the temperature of the operating fluid.

Particular advantages of this version: Enhanced protection of the shaft seals during cold start

because the built-in temperature-controlled valve provides huge savings in Δp , particularly compared to externally piped cooler bypass valves which use check valves. Also in comparison to externally piped thermal valves, significant improvements in Δp are achieved.

Drastically reduced time and effort for installation (Plug & Play),

because the complete package is supplied ready-to-install (reduction in components) and the need for blocks and fittings is largely eliminated.

RKM head with built-in thermal bypass valve and numerous connection options (Multiport).

RKM 355 with cooler bypass valve.

The valve "V1" is used here as a cooler bypass valve.

It protects the cooler from excessive pressures. If the back pressure increases at the cooler during cold start, the valve opens and part of the flow drains directly to the tank.

In order to ensure full flow cooling, the element bypass valve discharges to the cooler.

Particular advantages of this version:

Space and cost saving

Cooler bypass valve built into the filter

Increased operating safety

Cooler always supplied with finely filtered oil

Pressure protection of the cooler

Function of the RKM 355 with cooler bypass valve.

HYDAC RKM: Two Filters in One.

A design that saves money.

By using a HYDAC Return Line & Suction Boost Filter RKM you will benefit from:

Space saving

Just one filter required instead of two

Easy maintenance

Half the time required for installation and maintenance

Cost saving

Lower investment, storage and service costs

Increased operating safety

Cavitation at the pump is reliably prevented and finely filtered oil is supplied even in the suction line.

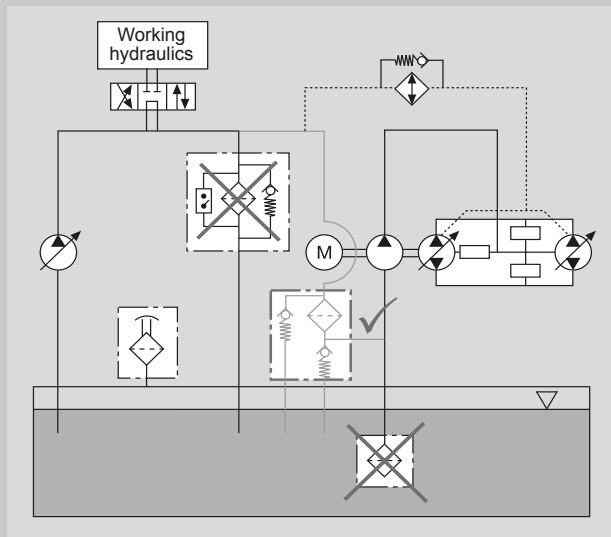

One filter.

Two functions.

All the advantages.

The RKM combines the advantages of a return line filter with those of a suction filter in a single filter!

Return line & suction boost filters are particularly suitable for use in machines with two or more circuits, such as for example in mobile working machines with hydrostatic traction drives (wheel loaders, forklifts).

Application example for the RKM in mobile machines.

Function.

The return line flow Q_R is supplied to the element via one or more inlets "A". Once the element has been subjected to flow from the outside to the inside, the back-pressure valve "V1" in the element builds 0.5 bar positive pressure.

Particularly in cold start conditions this positive pressure supports the suction characteristics of the pump(s) connected to "B" (e.g. boost pumps). This considerably reduces the risk of cavitation.

Ensure that the return line volume in operating conditions is always greater than the volume which is supplied on the suction side. The surplus volume drains to tank via "T". The bypass valve "V2" is fitted to relieve excessive back-pressure.

Part of the flow then drains directly to tank, bypassing the element. This configuration of valves ensures that only finely filtered oil reaches the suction port during operation*. The gradual increase of the valve characteristics contributes to keeping the back pressure in the return lines sufficiently low, even with high viscosity levels.

With optional valve "V3", oil can be drawn from the tank for short periods*, e.g. for initial filling and for venting.

Further options:

Anti-cavitation valve* with coarse strainer for filtered oil also in anti-cavitation mode

Anti-cavitation valve* in the element bypass valve "V2" for finely filtered oil also in anti-cavitation mode

Throttle in back-pressure valve "V1" for reducing pressure and draining oil

* not for RKM 355

VA = clogging indicator

Function of the RKM.

2.6 CHANGING THE CARTRIDGE

Filter cartridge type MG:

Unscrew filter cartridge (using a strap wrench, if necessary). Lubricate seal on the new cartridge. Screw in new cartridge until contact is made with the sealing surface. Then hand-tighten. Check for leakage and tighten further if necessary.

Filter cartridge type MA:

Unscrew filter cartridge (using a strap wrench, if necessary). Lubricate new seal and insert it into the filter head. Screw in new cartridge until contact is made with the sealing surface. Then hand-tighten. Check for leakage and tighten further if necessary.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

MF 80

MF 160, 180

MFD 160, 180

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

BN	Filtration rating			
	3 μm	5 μm	10 μm	20 μm
80	–	–	4.3	2.5
160	4.3	3.6	2.0	1.1
180	2.2	1.9	1.1	0.6

3.3 SIZING GUIDELINES

Filters should be calculated on the basis of a total differential pressure with clean element and at operating temperature; for use as:

- Suction filter: 0.03 - 0.05 bar
- Return line filter: 0.3 - 0.5 bar
- Pressure filter: 0.3 - 0.5 bar

However, cold start conditions must be taken into account.

4. DIMENSIONS

MF 80

MF 160/180

Inline Filter LPF With Integrated Thermal Bypass Valve up to 140 l/min, up to 50 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- integrated thermal bypass valve
- bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Mobilemicron® (MM):	10 bar

1.3 SEALS

Perbunan (=NBR)

Filter LPF

Flange-Mounted, With Integrated Cooler Bypass Valve up to 260 l/min, up to 50 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl. The built-in check valve in the filter head supplies partial flow to the cooler.

Standard equipment:

- cooler bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON): 20 bar
Mobilemicron® (MM): 10 bar

1.3 SEALS

Perbunan (=NBR)

1.4 INSTALLATION

Inline filter

1.5 SPECIAL DESIGNS AND ACCESSORIES

- Seals in FPM, EPDM
- Without clogging indicator connection

1.6 FILTER SPECIFICATIONS

Nominal pressure	50 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-10 °C to +120 °C
Material of filter head	EN-GJS-400
Material of filter bowl	Aluminium
Type of clogging indicator	VM (differential pressure measurement up to 210 bar operating pressure)
Pressure setting of the clogging indicator	2 bar (others on request)
Bypass cracking pressure	3.4 bar

1.7 SPARE PARTS

See Original Spare Parts List

Inline Filter MFX

up to 130 l/min, up to 50 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- 4 possible positions for a clogging indicator
- bypass valve

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 16889

Filter elements are available with the following pressure stability values:

Betamicron® (BN4HC):	20 bar
Ecomicron® (ECON2):	10 bar
Mobilemicron® (MM):	10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	50 bar
Fatigue strength (without BF clogging indicator)	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure 300,000 cycles at 70 bar
Temperature range	-10 °C to +80 °C
Material of filter head	Aluminium
Material of filter bowl	Aluminium
Type of clogging indicator	VM (Diff. pressure indicator up to 210 bar operating pressure) VL (Diff. pressure indicator up to 50 bar operating pressure)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = \text{given in graphs (see point 3.1)}$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

MFX 100/200: G1

MFX 100/200: G 3/4

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Inline Filter MFM

up to 100 l/min, up to 280 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- bypass valve
- connection for a clogging indicator on the top of the head (4 mounting holes)
- filters are supplied phosphated and primed

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:
Optimicron® (ON): 20 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	280 bar
Fatigue strength	0 to 280 bar, min. 10 ⁷ cycles 0 to 320 bar, min. 10 ⁵ cycles
Temperature range	-10 °C to +100 °C (-30 °C to -10 °C: p _{max} = 140 bar)
Material of filter head	EN-GJS-400-15
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	5 bar (others on request)
Bypass cracking pressure	7 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

As inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

Connection for a clogging indicator on the side of the head (3 mounting holes)

L..., LED, V, W (for descriptions, see Point 2.1)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = \text{(see Point 3.1)}$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

MFM - Port M18 x 1.5 / G 1/2

MFM - Port M22 x 1.5 / G 3/4

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Pressure Filter DFM with Differential Pressure Relief Valve

up to 280 l/min, up to 400 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- differential pressure controlled relief valve
- without pressure release / oil drain plug
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:
Betamicon® (BH4HC): 210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	400 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-30 °C to +100 °C (-30 °C to -10 °C: p _{max} = 200 bar)
Material of filter head	EN-GJS-400-15
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	5 bar (others on request)
Cracking pressure of differential pressure controlled relief valve	20 bar (others on request)
	NOTE: On request, ON elements (pressure stability up to 20 bar) can also be used at lower cracking pressures.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

DFM 160/240/280

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

DFM	BH4HC			
	3 μm	5 μm	10 μm	20 μm
160	16.8	10.4	5.9	4.4
240	10.6	6.8	3.9	2.9
280	5.7	3.4	1.8	1.6

4. DIMENSIONS

DFM	Weight incl. element [kg]	Volume of pressure chamber [l]
160	11.0	0.6
240	12.5	0.8
280	17.1	1.45

NOTE

Pressure Filter HFM up to 140 l/min, up to 400 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- bypass valve
- connection for a clogging indicator on the top of the head (4 mounting holes)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:
Optimicron® (ON): 20 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	400 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-10 °C to +100 °C (-30 °C to -10 °C: p _{max} = 200 bar)
Material of filter head	EN-GJS 400-15
Material of filter bowl	Cold extruded steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	5 bar (others on request)
Bypass cracking pressure	7 bar (others on request)

Suction Filter SF/SFM/SFF and Suction Filter Elements S/S.. up to 500 l/min

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. The SF filters consist of a filter housing and a bolt-on cover plate. The SFM and SFF filters consist of a filter head with filter bowl and bolt-on cover plate (on the SFF there is a foot valve in the base of the filter bowl).

Standard equipment:

- bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

The suction filter elements S are designed to be screwed into the suction lines of pumps.

It is essential that suction filter elements are always installed well below the minimum oil level.

The suction filter elements S.. are designed to be mounted simply onto the outside of the tank. They are used in devices with hoses that are exposed to little mechanical load. Elements can be changed very simply.

Standard equipment:

- without bypass valve

Filter elements are available with the following pressure stability values:

Paper (P): 5 bar
Wire mesh (W): 5 bar

1.3 FILTER SPECIFICATIONS

5. DIMENSIONS

Tank requirements

- In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and RA 3.2 μm maximum roughness.
- In addition, the contact area should be free of damage and scratches.
- The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter.
As an alternative, the tank flange can be continuously welded from the inside.
- Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.

Suction Filter SFAR

Element flow direction from in to out
up to 250 l/min

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a cover plate, filter head and housing tube. The element is top-removable.

These filters can be installed horizontally below the oil level.

Standard equipment:

- mounting holes on the filter head
- magnetic core built into cover plate
- foot valve
- connection for a clogging indicator in filter head

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Modification number

X the latest version is always supplied

Supplementary details

V FPM seals
OM without magnetic core
MPx Multiport head only for SFAR 180, 200, 250 (see Point 2.4)

2.2 REPLACEMENT ELEMENT

0180 RS 010 PE /-V

Size

0100, 0150, 0180, 0200, 0250

Type

RS

Filtration rating in µm

PE : 010
WR : 100

Filter material

PE, WR

Supplementary details

V (for descriptions, see Point 2.1)

2.3 REPLACEMENT CLOGGING INDICATOR

VMF 1 UE . X /-V

Type

VMF Thread G 1/8 (SFAR 100, 150)*

Pressure setting

1 1 bar (for type UE)
0.2 0.2 bar (for type UF)

Type of clogging indicator

(see Point 2.1)

Modification number

X the latest version is always supplied

Supplementary details

V (for descriptions, see Point 2.1)

* for SFAR 180, 200 and 250 on request

2.4 PORT CONFIGURATION

SFAR 180, 200, 250

Since there are numerous options for machining the ports on the head of the SFAR 180-250, the code WZF is selected here as standard. In order to determine the position and size of the ports, an MPF, MPI or MPL code is added as a supplementary detail. These three connection options are preferred types, please contact us to discuss other options.

Example:

SFAR PE 200 WZF 10 W 0.0 /-MPI

MPF

- S1: Connection G1½
- S2: Connection G1
- S3: Connection G1½

4. DIMENSIONS

SFAR 100 – 150

Type	A	C	Weight incl. element [kg]
SFAR 100	274	250	1.8
SFAR 150	354	330	2.1

SFAR 180 – 250

Type	a	B	C	Weight incl. element [kg]
SFAR 180	404	396	520	3.63
SFAR 200	441	429	580	4.68
SFAR 250	583	571	690	5.38

Tank-Top Return Line Filter RFN with Elements to DIN 24550 up to 490 l/min, up to 10 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head, filter bowl and a bolt-on cover plate.

Standard equipment:

- bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:
Betamicon® (BN4HC): 20 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	10 bar
Temperature range	-10 °C to +100 °C
Material of filter head	Aluminium
Material of filter bowl	Polyamide
Material of cover plate	Polyamide (RFN 40 to 100) Aluminium (RFN 160 to 630)
Type of clogging indicator	VR Connection thread G 1/2 VMF Connection thread G 1/8
Pressure setting of the clogging indicator	2.5 bar (others on request)
Bypass cracking pressure	3.5 bar (others on request)

L..., LED, (for descriptions, see point 2.1.)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

RFN 40/63/100

RFN 160/250

RFN 400/630

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

RFN	BN4HC			
	3 μm	6 μm	10 μm	25 μm
40	14.2	7.8	4.8	2.6
63	9.5	5.2	3.4	1.8
100	6.8	3.3	2.3	1.2
160	3.6	1.8	1.2	0.5
250	2.8	1.4	0.9	0.4
400	2.2	1.6	1.3	1.0
630	2.1	1.6	1.3	0.9

4. DIMENSIONS

Tank requirements

1. In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and RA 3.2 µm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter. As an alternative, the tank flange can be continuously welded from the inside.
4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.
5. When using a dipstick through a mounting screw, threadlock the screw into the thread, using Loctite 243, for example, or a similar threadlocker.

Return Line Filter RF up to 15000 l/min, up to 25 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter housing and a threaded cover plate. Standard equipment:

- bypass valve in the element. For RF 450/580 the bypass valve is built into the cover plate as standard.
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943
- ISO 3724, ISO 3968, ISO 11170
- ISO 16889

Number of filter elements

RF	Elements
30	1x0030R
60	1x0060R
110	1x0110R
160	1x0160R

4. DIMENSIONS

Tank requirements

1. In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and Ra 3.2 μm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter.
4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.

Tank-Top Return Line Filter RFND Change-Over Version to DIN 24550 up to 480 l/min, up to 10 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head, filter bowl and a screw-on or bolt-on cover plate.

Standard equipment:

- bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:
Betamicon® (BN4HC): 20 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	10 bar
Temperature range	-10 °C to +100 °C
Material of filter head	Aluminium
Material of filter bowl	Polyamide
Material of cover plate	Polyamide (RFN 100) Aluminium (RFN 250 and 630)
Type of clogging indicator	VRConnection thread G 1/2 VMF Connection thread G 1/8
Pressure setting of the clogging indicator	2.5 bar (others on request)
Bypass cracking pressure	3.5 bar (others on request)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

RFND 100

RFND 250

RFND 630

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

RFND	BN4HC			
	3 μm	6 μm	10 μm	25 μm
100	6.8	3.3	2.3	1.2
250	2.8	1.4	0.9	0.4
630	2.1	1.2	0.9	0.7

4. DIMENSIONS

Tank requirements

1. In the filter contact area, the tank flange should have a maximum flatness of 0.3 mm and RA 3.2 μm maximum roughness.
2. In addition, the contact area should be free of damage and scratches.
3. The fixing holes of the tank flange must be blind, or stud bolts with threadlocker must be used to fix the filter.
As an alternative, the tank flange can be continuously welded from the inside.
4. Both the tank sheet metal and/or the filter mounting flange must be sufficiently robust so that neither deform when the seal is compressed during tightening.

Change-Over Return Line Filter RFD up to 1300 l/min, up to 25 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of one-piece housings with bolt-on cover plates. The two housings are connected by a ball change-over valve with negative overlap and single-lever operation.

Standard equipment:

- bypass valve
- connection for a clogging indicator (1 clogging indicator per filter side!)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Paper (P/HC):	10 bar
Stainl. st. wire mesh (W/HC):	20 bar
Stainless steel fibre (V):	210 bar
Betamicon®/Aquamicron® (BN4AM):	10 bar
Aquamicron® (AM):	10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	25 bar	
Temperature range	-10 °C to +100 °C	
Material of filter housing and cover plate	RFD 60 to 330:	Aluminium
	RFD 660 to 1300:	EN-GJS-400-15

Inline Filter RFL Welded Version up to 15000 l/min, up to 16 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a two-piece filter housing with a bolt-on cover plate.

Standard equipment:

- stand
- with bypass valve
- inlet and outlet are positioned at different heights on opposite sides
- connections for venting and draining
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943
- ISO 3724, ISO 3968, ISO 11170
- ISO 16889

Number of filter elements

RFL	Elements
130x	1x1300 R
132x	1x2600 R
250x	3x0850 R
252x	3x1700 R
400x	5x0850 R
402x	5x1700 R
520x	4x1300 R
522x	4x2600 R
650x	5x1300 R
652x	5x2600 R
780x	6x1300 R
782x	6x2600 R
1500x	10x1300 R
1502x	10x2600 R

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Optimicon® Power (ON/PO):	10 bar
Paper (P/HC):	10 bar
Stainl. st. wire mesh (W/HC):	20 bar
Stainless steel fibre (V):	30 bar
Betamicon®/Aquamicron® (BN4AM):	10 bar
Aquamicron® (AM):	10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	16 bar
Temperature range	-10 °C to +100 °C
Material of filter housing and cover plate	RFL 1300 to 15020: Welded steel RFL 1303 to 15023: Stainl. st. 1.4571
Type of clogging indicator	VM (differential pressure measurement up to 210 bar operating pressure)
Pressure setting of the clogging indicator	2 bar (others on request)
Bypass cracking pressure	3 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Without bypass valve
- Drain and vent ports with ball valves or other shut-off valves
- Inlet and outlet positioned one above the other
- Counter flanges available for all sizes
- Venting line with sight gauges
- Cover plate lifting device

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

Material code (final digit of filter size) - 1:

These filters can be supplied with manufacturer's test certificates O and M to DIN 55350, Part 18. Test certificates 3.1 to DIN EN 10204.

Material code (final digit of filter size) - 3:

Filters for use in separation technology with low viscosity, high viscosity and aggressive fluids as well as gaseous media.*

* These filters are available from HYDAC Process Technology division.

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HÉES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.
- Filters must be flexibly mounted and not fixed rigidly to the floor or used as a pipe support.

Symbol for hydraulic systems

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

RFL 1300, 1303

RFL 1320, 1323

RFL 2500, 2503, 2520, 2523

RFL 4000, 4003, 4020, 4023

RFL 5200, 5203, 5220, 5223

RFL 6500, 6503, 6520, 6523

RFL 7800, 7803, 7820, 7823

RFL 15000, 15003, 15020, 15023

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

2.4 INLINE FILTER – INDIVIDUAL SHUT-OFF CAPABILITY

TECHNICAL DESCRIPTION

The NF n+1 filter series has been developed in line with the classic NF filters. It features a ball change-over valve from HYDAC Filtrertechnik GmbH and offers a cost-efficient and space saving alternative to the classic, fully duplex version of the NF series. In comparison to the previous butterfly change-over valve with 16 bar operating pressure, the new HYDAC ball change-over valve is rated to the higher operating pressure of 25 bar. Since each filter tower can be shut off individually using the ball change-over valve, the filters can be changed while the system is running, guaranteeing 24 hour operation.

Flow rate: 500–4000 l/min
 Nom. pressure: up to 25 bar

DIMENSIONS

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

NF 160, 240, 280

NF 330, 500, 750

**NF 1310, 2610
NF 1340, 2640
NF 950, 1350, 2650**

NF 5240

NF 7840

NF 10440

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a two-piece filter housing with a bolt-on cover plate.

Standard equipment:

- with bypass valve
- connections for venting and draining
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Optimicon® Power (ON/PO):	10 bar
Paper (P/HC):	10 bar
Stainl. st. wire mesh (W/HC):	20 bar
Stainl. st. fibre (V):	30 bar
Betamicon®/Aquamicron® (BN4AM):	10 bar
Aquamicron® (AM):	10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	25 bar 40 bar (RFL 662 to 1322 to AD)
Temperature range	-10 °C to +100 °C

- Counter flanges as welding or blank flanges

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

These filters can be supplied with manufacturer's test certificates O and M to DIN 55350, Part 18.

Test certificates 3.1 to DIN EN 10204 and approval certificates (Type Approval) for different approval authorities. Areas of application, amongst others: lubrication.

Filter to API 614 (ANSI flange) on request!

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506

Low Pressure Filter LPF up to 280 l/min, up to 50 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- without bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicron® (ON): 20 bar
Betamicon® (BH4HC): 210 bar
Wire mesh (W/HC)*: 30 bar

*only for LPF 160, 240, 260, 280

NOTICE:

Only filter elements with Optimicron® and .../HC material can be used in LPF filters!

1.3 FILTER SPECIFICATIONS

Nominal pressure	LPF 35, 55: 40 bar LPF 160, 240, 260, 280: 50 bar
Fatigue strength	at nominal pressure 10 ⁶ load cycles from 0 to nominal pressure LPF 35 and 55: 10 ⁷ load cycles at 40 bar
Temperature range	-30 °C to +100 °C
Material of filter head	Aluminium
Material of filter bowl	Aluminium
Type of indicator	VM (Diff. pressure indicator up to 210 bar operating pressure) VL (Diff. pressure indicator up to 40 bar operating pressure - only BF indicator)
Pressure setting of clogging indicator	5 bar (others on request)
Bypass cracking pressure (optional)	6 bar (LPF 160 - 280) 7 bar (LPF 35 - 55) others on request

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

LPF 35, 55

LPF 160, 240, 260, 280

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Inline Filter LF Inline Filter LFF for Reversible Oil Flow up to 500 l/min, up to 100 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl. LFF filters are suitable for flow in both directions.

Standard equipment:

- connection for a clogging indicator in filter head
- mounting holes in the filter head
- drain screw with pressure relief (LF 330 and above)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BH4HC):	210 bar
Optimicon® Pulse (ON/PS):	20 bar
Optimicon® Pulse (OH/PS):	210 bar
Wire mesh (W):	20 bar
Stainless steel fibre (V):	210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	100 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure (For other pressures, see Point 1.8)
Temperature range	-30 °C to +100 °C
Material of filter head	Aluminium
Material of filter bowl	Aluminium
Type of clogging indicator	VM (differential pressure measurement up to 210 bar operating pressure)
Pressure setting of the clogging indicator	5 bar (others on request)
Bypass cracking pressure (optional)	6 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline filter with or without reversible oil flow

1.6 SPECIAL MODELS AND ACCESSORIES

- Bypass valve built into the head, separate from the main flow
- Oil drain screw up to LF/LFF 240
- Seals in FPM, EPDM
- Test and approval certificates

1.7 SPARE PARTS

See Original Spare Parts List

1.8 FATIGUE STRENGTH

1.9 CERTIFICATES AND APPROVALS

On request

1.10 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.11 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

DFN 40, 63, 100
LFN 40, 63, 100

DFNF / LFN 40, 63, 100

DFN 160, 250, 400

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Pressure Filter MDF up to 280 l/min, up to 280 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- without bypass valve
- connection for a clogging indicator in filter head
- installation holes in the filter head

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicron® (ON):	20 bar
Betamicon® (BH4HC):	210 bar
Wire mesh (W):	20 bar
Stainless steel fibre (V):	210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	210 bar or 280 bar
Fatigue strength	min. 5 million cycles at 1.2 times nominal pressure (for other pressures, see Point 1.8)
Temperature range	-30 °C to +100 °C (-30 °C to -10 °C: $p_{max} = 140$ bar)
Material of filter head	EN-GJS-400-15
Material of filter bowl	Steel
Type of indicator	VM (Diff. pressure indicator up to 210 bar operating pressure) VD (Diff. pressure indicator up to 420 bar operating pressure)
Pressure setting of the clogging indicator	5 bar (others on request)
Bypass cracking pressure (optional)	6 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Bypass valve built into the head, separate from the main flow
- Oil drain plug
- Seals in FPM, EPDM
- Test and approval certificates

1.7 SPARE PARTS

See Original Spare Parts List

1.8 FATIGUE STRENGTH

1.9 CERTIFICATES AND APPROVALS

- Test certificate 2.2
- Manufacturer's certificate O and M to DIN 55350, part 18
Other certificates on request

1.10 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.11 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

MDF 30

MDF 60-110

MDF 160-240

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Inline Filter HDF Inline Filter for Reversible Flow HDFS up to 380 l/min, up to 280 (420) bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl. HDFS filters (on request) are suitable for flow in both directions.

Standard equipment:

- port in L-configuration
- without bypass valve
- port for a clogging indicator in filter head

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON): 20 bar
Betamicon® (BH4HC): 210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	280 (420) bar
Fatigue strength	0 to 280 bar (min. 10 ⁶ cycles) 0 to 420 bar (min. 250,000 cycles)
Temperature range	-30 °C to +100 °C (-30 °C to -10 °C: p _{max} = 140 bar)
Material of filter head	EN-GJS 400-15
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure indication up to 420 bar operating pressure)
Pressure setting of clogging indicator	5 bar for HDF (others on request) 8 bar for HDFS (others on request)
Cracking pressure of bypass only for HDF filters (optional)	6 bar (others on request)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

HDF

HDF with NEV

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Pressure Filter DF

Pressure filter for Reversible Oil Flow DFF/DFFX

up to 1800 l/min, up to 420 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl. DFF filters are suitable for flow in both directions. The Δp optimized filters DFFX are also suitable for flow in both directions and the filter ports are in L configuration. Standard equipment:

- connection for a clogging indicator in filter head
- without bypass valve
- drain screw with pressure relief (for size DF/DFF/DFFX 330 and above)
- 1 or 2-piece filter bowl available as an option for DF/DFF 280-660, DFFX 330-660 and DF 2000
- 2-piece filter bowl standard for size DF/DFF/DFFX 990 and above

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Number of filter elements

DF/DFF/DFFX	Elements
30	1x0030 D
60	1x0060 D
110	1x0110 D
140	1x0140 D
160	1x0160 D
240	1x0240 D
280	1x0280 D
330	1x0330 D
500	1x0500 D
660	1x0660 D
990	1x0990 D
1320	1x1320 D
1500	1x1500 D
2000	3x0660 D
3000	3x0990 D
4000	3x1320 D

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BH4HC):	210 bar
Optimicon® Pulse (ON/PS):	20 bar
Optimicon® Pulse (OH/PS):	210 bar
Stainl. st. wire mesh (W)*:	20 bar
Stainless steel fibre (V)*:	210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	420 bar
Fatigue strength	at nominal pressure 2×10^6 cycles from 0 to nominal pressure (size 30 to 1320) 3×10^5 cycles at 420 bar (size 1500) 3×10^6 cycles at 280 bar (size 1500) 10^6 cycles at 315 bar (size 2000–4000)
Temperature range	-30 °C to +100 °C (-30 °C to -10 °C: $p_{max} = 210$ bar)
Material of filter head	EN-GJS 400-15, ADI (size 330–1500)
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure indication up to 420 bar operating pressure)
Pressure setting of clogging indicator	DF: 5 bar DFF/DFFX: 8 bar (others on request)
Bypass cracking pressure (optional)	6 bar (others on request)

1.4 SEALS

NBR (= Perbunan)

1.5 INSTALLATION

Inline filter with or without reversible oil flow

1.6 SPECIAL MODELS AND ACCESSORIES

- Seals in FPM, EPDM
- with bypass valve (except for DFF 1500)
- Oil drain screw, up to DF/DFF 280
- In ADI material - for high duty cycle (DF/DFF 330-1500)
- Element top-removable - TKZ 3.X (only DF filters 330 - 1500)
- ΔP -optimized filter (only DFFX filter 330-1320)

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

on request

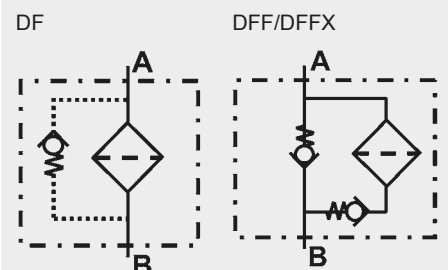

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

Symbol for hydraulic systems

* not in 2-piece filter bowl

Change-Over Inline Filter RFLD Welded Version up to 15000 l/min, up to 16 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING Construction

The filter housings are designed in accordance with international regulations. The two sections of the filter housing (each with bolt-on cover plates) are connected by means of a ball change-over valve with negative overlap and single lever operation (ball, segment) or hand-wheel (butterfly).

Standard equipment:

- connections for venting and draining
- connection for a clogging indicator
- pressure equalisation line
- bypass valve

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Number of filter elements

RFLD	Elements per side
130x	1x1300 R
132x	1x2600 R
250x	3x0850 R
252x	3x1700 R
400x	5x0850 R
402x	5x1700 R
520x	4x1300 R
522x	4x2600 R
650x	5x1300 R
652x	5x2600 R
780x	6x1300 R
782x	6x2600 R
1500x	10x1300 R
1502x	10x2600 R

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Optimicon® Power (ON/PO):	10 bar
Paper (P/HC):	10 bar
Stainl. st. wire mesh (W/HC):	20 bar
Stainless steel fibre (V):	30 bar
Betamicon®/Aquamicron® (BN4AM):	10 bar
Aquamicron® (AM):	10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	16 bar (or 10 bar: depending on size and nominal bore)
Temperature range	-10 °C to +100 °C
Material of housing and cover plate	Welded steel: final digit of filter size 0 Stainl. steel 1.4571: final digit of filter size 3
Type of clogging indicator	VM (differential pressure measurement up to 210 bar operating pressure)
Pressure setting of the clogging indicator	2 bar (others on request)
Bypass cracking pressure	3 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 MOUNTING

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Orifice in the pressure equalisation line
- Drain and vent ports with ball valves or other shut-off valves
- Counter flanges available for all sizes
- Change-over valve lockable
- Venting line with sight gauges
- Flanges to DIN 2501 with O-ring seal
- Cover plate lifting device for sizes RFLD 4000

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

Material code (final digit of filter size): 0:

These filters can be supplied with manufacturer's test certificates O and M to DIN 55350, Part 18. Test certificates 3.1 to DIN EN 10204 and approval certificates (Type Approval) for different approval authorities.

Areas of application, amongst others: lubrication

Material code (final digit of filter size): 3:

Filters for use in separation technology with low viscosity, high viscosity and aggressive fluids as well as gaseous media.*

* These filters are available from HYDAC Process Technology division.

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) and CLP oils on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.
- Filters must be flexibly mounted and not fixed rigidly to the floor or used as a pipe support.

Symbol for hydraulic systems

2.4 TWO-PART BALL CHANGE-OVER VALVE KUA

Independently of RFLD filters, the valve can also be used separately as a connector piece for double plate heat exchangers as well as for double tube bundle coolers.

It consists of SG iron and is available with a DIN DN 200 flange and a pressure equalisation line with integrated ball valve (DN 15).

Can be installed in filters RFLD 4000, 4020, 5200, 5220, 6500, 6520, 7800, 15000 and 15020 welded of steel.

Preferred distance from ball centre to ball centre is 500 mm¹⁾.

Others on request!

When supplied, control spindle is disconnected!

Technical features

- Two-part change-over valve
- Ports: DIN DN 200 (other ports on request)
- Materials
 - SG iron EN GJS-400-15 to DIN EN 1563
- Full bore
- Supplied with cooler connecting flange

1) When used on, for example, a cooler, there is a joint between the two parts of the KUA. In this case, the min. centre-to-centre distance is 710.

DIMENSIONS

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Change-Over Filter NFD

up to 1600 l/min, up to 25 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter housing and a threaded cover plate. The housings are connected by a ball change-over valve.

Standard equipment:

- connection for a clogging indicator in filter head
- with bypass valve

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Number of filter elements

NFD	Elements per side
1340	1x1300 R
2640	1x2600 R
5240	2x2600 R
7840	3x2600 R
10440	4x2600 R

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Optimicon® Pulp & Paper (ON/PP):	10 bar
Ecomicon® (ECON2):	10 bar
Stainl. st. wire mesh (W/HC):	20 bar
Stainless steel fibre (V):	210 bar
Paper (P/HC):	10 bar
Betamicon®/Aquamicron® (BN4AM):	10 bar
Aquamicron® (AM):	10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	25 bar
Max. operating pressure	30 bar at max. 10 ⁶ cycles
Temperature range	-10 °C to +100 °C
Material of filter head, tube and cover plate	Aluminium
Material of change-over valve, elbow and connection piece	EN-GJS-400-15
Type of clogging indicator	VM (differential pressure measurement)
Pressure setting of the clogging indicator	2 bar (others on request)
Bypass cracking pressure	3 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Seals in FPM
- NFD filter as tank-top return line filter (type code 1.x) on request

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

On request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using visual clogging indicators, the BM version (visual with manual reset) only should be used.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ = given in diagrams (see point 3.1)

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

NFD 1340 / 2640

NFD 5240

NFD 7840

NFD 10440

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

NFD	ON						ON/PP
	1 μm	3 μm	5 μm	10 μm	15 μm	20 μm	5 μm

Change-Over Inline Filter AFD to API 614 up to 1700 l/min, up to 40 bar

AFD 112/113 AFD 122/123 AFD 232/233 AFD 242/243 AFD 332/333 AFD 502/503 AFD 542/543 AFD 882/883 AFD 1402/1403 AFD 2702/2703

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filters are designed in accordance with the API 614 (approval according to ASME Sec. VIII, Div.1). The two sections of the filter housing (each with a bolt-on cover plate) are connected by means of a ball change-over valve with negative overlap and single lever operation.

Standard equipment:

- without bypass valve
- without clogging indicator
- inlet and outlet ASME flange
- ball change-over valve with internal parts made of stainless steel
- pressure equalization line with 4 mm orifice
- side vent and drain, 3/4" ASME flange connection (300 lbs)
- with stand
- test certificates (acceptance test certificate 3.1 to DIN EN 10204; Manufacturer's Test Certificate M of final inspection and pressure testing)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicron® Power (ON/PO): 10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	16 bar (at 150 lbs) 25 bar (at 300 lbs) 40 bar (at 300 lbs)
Temperature range	-10 °C to +100 °C
Material of filter housing and cover	Forged version: SA-266 Gr.4/1.0565: 112, 122, 232, 242, 332, 502, 542 SA-182 F316L/1.4404: 113, 123, 233, 243, 333, 503, 543 Cast version: SA-216 WCB/1.0619: 882, 1402, 2702 SA-351 CF8M/1.4408: 883, 1403, 2703

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Ball, spindle (internal parts) not made of stainless steel
- Pressure compensating line with different orifice size and/or flared fitting
- Differential pressure measurement across complete filter (clogging indicator)
- Higher operating pressure on request
- Others on request!

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

- With U-Stamp at extra charge
- Classification societies and other approvals on request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) and CLP oils on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.
- Filters must be flexibly mounted and not fixed rigidly to the floor or used as a pipe support.

Symbol for lubrication systems

2.4 QUICK SELECTION

2.5 TWO-PART BALL CHANGE-OVER VALVE (KUA)

The new two-part ball change-over valve was originally developed for use in filters of the AFLD series according to API directives.

Independently of AFLD filters, the valve can also be used separately as a connector piece in double plate heat exchangers as well as for double tube bundle coolers.

It is made of either steel or stainless steel and has ASME flanges as standard. It is available in the sizes ASME 3" and 4" – both in 150 or 300 lbs.

When supplied: control spindle is disconnected!

Technical features

- Two-part change-over valve
- Connections: DN 80 (3") and DN 100 (4") (other connections on request)
- Materials
 - Steel: SA-216-WCB / 1.0619-DIN EN 10213 (GP-240GH)
 - Stainless steel: SA-351 CF8M / 1.4408-DIN EN 10213
- Full bore
- Supplied with flange for cooler

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

Change-Over Inline Filter FLND

to DIN 24550*, up to 400 l/min, up to 63 bar

*Filters and filter elements also available in HYDAC dimensions

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head with built-in change-over valve and screw-in filter bowls.

Standard equipment:

- without bypass valve
- connection for a clogging indicator
- oil drain plug (FLND 160 to 400)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON) ¹⁾ :	20 bar
Betamicon® (BN4HC) ²⁾ :	20 bar
Betamicon® (BH4HC):	210 bar
Wire mesh (W/HC, W) ³⁾ :	20 bar

¹⁾ only for FLND 60, 110, 140

²⁾ only for FLND 40, 63, 100, 160, 250, 400

³⁾ only for FLND 40–140

1.3 FILTER SPECIFICATIONS

Nominal pressure	25 bar (FLND 160 to 400) 63 bar (FLND 40 to 140)
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-10 °C to +100 °C
Material of filter head	Aluminium
Material of filter bowl	Aluminium (FLND 100 and 140: Steel)
Type of clogging indicator	VM (differential pressure measurement up to 210 bar operating pressure)
Pressure setting of the clogging indicator	2.5 bar or 5 bar (others on request)
Bypass cracking pressure (optional)	3.5 bar or 7 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- With bypass valve
- With oil drain plug for FLND 40 to 140 (SO184)
- Seals in FPM, EPDM
- Reverse flow "RL" for FLND 160 and above on request

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

These filters can be supplied with manufacturer's test certificates O and M to DIN 55350, Part 18.

Test certificates 3.1 to DIN EN 10204 and approval certificates (Type Approval) for different approval authorities.

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.
- Filters with switching valve are designed to have a permissible leakage depending on the operating medium.

Symbol for hydraulic systems

VA = clogging indicator

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

FLND 40, 60, 63, 100, 110, 140

FLND 160, 250, 400

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Change-Over Inline Filter RFLD Cast Version up to 2500 l/min, up to 64 bar

RFLD 111 RFLD 241 RFLD 261 RFLD 331 RFLD 501 RFLD 661 RFLD 851 RFLD 951 RFLD 1301 RFLD 2701

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. The two sections of the filter housing, each of which has a bolt-on cover plate, are connected by means of a ball change-over valve.

Standard equipment:

- connections for venting and draining
- connection for a clogging indicator
- for size DN 80 and above, the filters are fitted with a pressure equalisation line and a ball shut-off valve
- with bypass valve

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Optimicon® Power (ON/PO):	10 bar
Paper (P/HC)*:	10 bar
Stainl. st. wire mesh (W/HC):	20 bar
Stainless steel fibre (V)*:	30 bar
Betamicon®/Aquamicron® (BN4AM)*:	10 bar
Aquamicron® (AM)*:	10 bar

* for RFLD 2701 on request

1.3 FILTER SPECIFICATIONS

Nominal pressure	16 bar (RFLD 2701) 25 bar (RFLD 331-1321) 40 bar (RFLD 111-261, 662-1322) 64 bar (RFLD 332-502)
Temperature range	-10 °C to +100 °C
Material of filter housing and cover plate	EN-GJS-400-15: = 1
Material code (final digit of filter size)	EN-GJS-400-18LT: = only RFLD 2701 GP 240 GH+N: = 2
Type of clogging indicator	VM (differential pressure measurement up to 210 bar operating pressure)
Pressure setting of the clogging indicator	2 bar (others on request)
Bypass cracking pressure	3 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 MOUNTING

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Orifice in the pressure equalisation line
- Stand
- Drain and vent ports with ball valves or other shut-off valves
- Counter flanges available for all sizes
- Change-over valve lockable
- Venting line with sight gauges
- RFLD filter with nominal bore 100 at max. 50 bar operating pressure on request

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

These filters can be supplied with manufacturer's test certificates O and M to DIN 55350, Part 18. Test certificates 3.1 to DIN EN 10204 and approval certificates (Type Approval) for different approval authorities. Areas of application, amongst others lubrication.

Filter to API 614 (ANSI flange) on request!

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) and CLP oils on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.
- Filters must be flexibly mounted and not fixed rigidly to the floor or used as a pipe support.
- When used with W/HC and P/HC elements, please follow the sizing recommendation under point 3.3!

Symbol for hydraulic systems

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

RFLD 111

RFLD 241, 261

RFLD 331, 332, 501, 502

RFLD 661, 662, 851, 852

RFLD 951, 952, 1301, 1302, 1321, 1322

RFLD 2701

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Change-Over Inline Filter FMND to DIN 24550*, up to 400 l/min, up to 250 bar

*Filters and filter elements also available in HYDAC dimensions (FMND 40 to 140 only)

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head with built-in change-over valve and screw-in filter bowls.

Standard equipment:

- without bypass valve
- connection for a clogging indicator
- oil drain plug (FMND 160 to 400)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON) ¹⁾ :	20 bar
Betamicon® (BN4HC) ²⁾ :	20 bar
Betamicon® (BH4HC):	210 bar
Wire mesh (W/HC, W) ³⁾ :	20 bar

¹⁾ only for FLND 60, 110, 140

²⁾ only for FLND 40, 63, 100, 160, 250, 400

³⁾ only for FLND 40–140

1.3 FILTER SPECIFICATIONS

Nominal pressure	210 bar (FMND 160 to 400) 250 bar (FMND 40 to 140)
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-10 °C to +100 °C
Material of filter head	EN-GJS-400-15
Material of filter bowl	Steel
Type of indicator	VM (Diff. pressure indicator up to 210 bar operating pressure) VD (Diff. pressure indicator up to 420 bar operating pressure)
Pressure setting of the clogging indicator	2.5 bar or 5 bar (others on request)
Bypass cracking pressure (optional)	3.5 bar or 7 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- With bypass valve
- Oil drain plug (FMND 40 to 140 = SO184)
- Seals in FPM, EPDM
- Reverse flow "RL" for FMND 160 and above

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

These filters can be supplied with manufacturer's test certificates O and M to DIN 55350, Part 18. Test certificates 3.1 to DIN EN 10204 and approval certificates (Type Approval) for different approval authorities.

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

* only for FMND 40 - 140

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.
- Filters with switching valve are designed to have a permissible leakage depending on the operating medium.

Symbol for hydraulic systems

VA = clogging indicator

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

FMND 40, 60, 63, 100, 110, 140

FMND 160, 250, 400

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Change-Over Pressure Filter DFDK

up to 1800 l/min, up to 315 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head with screw-in filter bowls.

Standard equipment:

- ball change-over valve
- two-piece filter bowl for DFDK 990, 1320, 2640, 3690 (as an option for DFDK 660)
- connection for a clogging indicator
- drain screw with pressure relief
- pressure equalization line (for size DFDK 330 and above)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Number of filter elements

DFDK	Elements per side
30	1x0030 D
60	1x0060 D
110	1x0110 D
140	1x0140 D
160	1x0160 D
240	1x0240 D
280	1x0280 D
330	1x0330 D
500	1x0500 D
660	1x0660 D
990	1x0990 D
1320	1x1320 D
1320.3.X	1x1320 D
2640.3.X	2x1320 D
3960.3.X	3x1320 D

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BH4HC):	210 bar
Wire mesh (W/HC, W):	20 bar
Stainless steel fibre (V):	210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	160 bar (DFDK with type code 3.X) 315 bar (DFDK with type code 1.X and 2.X)
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-10 °C to +100 °C (-30 °C to -10 °C: p _{max} = 157.5 bar)
Material of filter head	EN-GJS-400-15
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	8 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

As inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Pressure equalization line for DFDK 160 - 280
- Detent pin to lock the lever for DFDK 330-1320...1.x/2.x

- Ball change-over in T configuration (simultaneous flow on both sides including detent)

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

On request

1.9 COMPATIBILITY WITH

HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant operating fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) and CLP oils on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

Change-Over Pressure Filter DFDKN to DIN 24550, up to 800 l/min, up to 315 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head with screw-in filter bowls.

Standard equipment:

- ball change-over valve
- two-piece filter bowl for DFDKN 400
- connection for a clogging indicator
- drain screw with pressure relief
- pressure equalization line (for size DFDKN 160 and above)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Betamicon® (BN4HC):	20 bar
Betamicon® (BH4HC):	210 bar
Wire mesh (W/HC):	20 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	315 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-10 °C to +100 °C (-30 °C to -10 °C: p _{max} = 157.5 bar)
Material of filter head	EN-GJS-400-15
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	8 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Detent pin to lock the lever for DFDKN 160-400
- Ball change-over in T configuration (simultaneous flow on both sides including detent)

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

on request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS TO DIN ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

DFDKN 40, 63, 100 with ball change-over in L configuration

DFDKN 160, 250, 400 with ball change-over in L configuration

DFDKN 40, 63, 100 with ball change-over in T configuration

DFDKN 160, 250, 400 with ball change-over in T configuration

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Pressure Filter DF...M A, DF...Q E, DF...MHA, DF...MHE Flange Mounted up to 550 l/min, up to 315 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- mounting holes in the filter head
- two-piece bowl for size DF...990 and above (optional for size DF...660 and above)
- drain screw with pressure relief (standard for size DF...330 and above)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BH4HC):	210 bar
Optimicon® Pulse (ON/PS):	20 bar
Optimicon® Pulse (OH/PS):	210 bar
Wire mesh (W/HC):	20 bar
Stainless steel fibre (V):	210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	DF...M A/MHA/MHE:	250 bar
	DF...Q E:	315 bar
Fatigue strength	10 ⁶ cycles (DF...M A/DF...Q E) 10 ⁸ cycles (DF...MHA/DF...MHE) from 0 to nominal pressure (for other pressures, see graph, Point 1.8)	
Temperature range	-10 °C to +100 °C (-30 °C to -10 °C: p _{max} = 0.5 x nom. press.)	
Material of filter head	EN-GJS-400-15 (DF...M A/DF...Q E) ADI (DF...MHA/DF...MHE)	
Material of filter bowl	Steel	
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)	
Pressure setting of the clogging indicator	5 bar (others on request)	
Cracking pressure of bypass (optional)	6 bar (only DF...M A / Q E)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

DF 60, 110, 140 M A

DF 160, 240, 280 M A / MHA

DF 30 Q E

DF 60, 110, 140 QE

DF 160, 240, 280 Q E (also /-OAI)

DF 330, 500, 660, 990, 1320 Q E / MHE

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Filter DF...M P side-flanged up to 550 l/min, up to 260 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- mounting holes in the filter head
- bypass valve built into the head
- two-piece bowl for size DF...990 and above (optional for size DF...660 and above)
- connection for a clogging indicator
- drain screw with pressure relief (standard for size DF...330 and above)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889

Filter elements are available with the following pressure stability values:

Optimicron® (ON): 20 bar
 Betamicron® (BH4HC): 210 bar
 Wire mesh (W/HC): 20 bar
 Stainless steel fibre (V): 210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	260 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-10 °C to +100 °C (-30 °C to -10 °C: p _{max} = 0.5 x nom. press.)
Material of filter head	EN-GJS-400-15
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	5 bar (others on request)
Bypass cracking pressure	6 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Pressure filter for flange mounting

1.6 SPECIAL MODELS AND ACCESSORIES

- Seals in FPM, EPDM
- Without clogging indicator connection
- Filter in top-removable version (version 3.x; only for size 660 to 1320 with two-piece bowl)
- Test and approval certificates

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS on request

1.9 COMPATIBILITY WITH

HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

DF 160, 240, 280 M P

DF 330, 500, 660, 990, 1320 M P

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Pressure Filter for Sandwich Stacking DFZ up to 80 l/min, up to 315 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- Service access on the right
- Without clogging indicator connection

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BH4HC):	210 bar
Optimicon® Pulse (ON/PS):	20 bar
Optimicon® Pulse (OH/PS):	210 bar
Metal fibre (V):	210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	315 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-30 °C to +100 °C (-30 °C to -10 °C: p _{max} = 157.5 bar)
Material of filter head	Steel
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	8 bar (others on request)

Pressure Filter for Manifold Mounting DFP and for Reversible Flow DFPF up to 620 l/min, up to 315 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl. DFPF filters are suitable for flow in both directions.

Standard equipment:

- connection for a clogging indicator
- two-piece bowl for DFP/F 990 and above (optional for DFP/F 660 and above)
- without bypass valve
- drain screw with pressure relief (standard for DFP/F 330 and above)

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BH4HC):	210 bar
Wire mesh (W):	20 bar
Stainless steel fibre (V):	210 bar

1.4 FILTER SPECIFICATIONS

Nominal pressure	315 bar *
Fatigue strength	At nominal pressure 10 ⁶ cycles (LC) from 0 to nominal pressure
Temperature range	-30 °C to +100 °C (-30 °C to -10 °C: p _{max} = 157.5 bar)
Material of filter head	EN-GJS 400-15
Material of filter bowl	Steel
Type of clogging indicator up to	VD (differential pressure measurement 420 bar operating pressure)
Pressure setting of the clogging indicator	DFP = 5 bar DFPF = 8 bar (others on request)
Bypass cracking pressure (optional)	6 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Pressure filter for manifold block mounting, with or without reversible oil flow

1.6 SPECIAL MODELS AND ACCESSORIES

- Bypass valve built into the head
- Seals in FPM, EPDM

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS on request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using visual clogging indicators, the BM version (visual with manual reset) only should be used.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

Symbol for hydraulic systems

Filter material

ON, BH4HC, V, W

Supplementary details

V, W (for descriptions, see point 2.1)

2.3 REPLACEMENT CLOGGING INDICATOR

VD 5 D . X /-L24

Type

VD differential pressure indicator up to 420 bar operating pressure

Pressure setting

5 standard for DFP filters 5 bar
 8 standard for DFPF filters 8 bar } others on request

Type of clogging indicator

D (see Point 2.1)

Modification number

X the latest version is always supplied

Supplementary details

L..., LED, V, W (for descriptions, see Point 2.1)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

DFP 60/110/140

DFP 160/240/280

DFP 330/500/660/990/1320

DFPF Δp -Q housing curves on request

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Return Line Filter HF4R up to 450 l/min, up to 10 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head, filter bowl and a bolt-on cover plate.

Standard equipment:

- bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170

Filter elements are available with the following pressure stability values:

Betamicon® (BN): 10 bar
Stainl. steel wire mesh (W/HC): 10 bar
Paper (P): 10 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	10 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-30 °C to +100 °C
Material of filter head	Aluminium
Material of filter bowl	Steel
Type of clogging indicator	VMF (return line indication)
Pressure setting of clogging indicator	2 bar (others on request)
Bypass cracking pressure	3 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 MOUNTING

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Without bypass valve
- Without port for clogging indicator

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

On request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

2.3 REPLACEMENT CLOGGING INDICATOR

VMF 2 D . X /-L24

Type of indicator

VMF return line pressure indicator

Pressure setting

2 standard 2 bar, others on request

Type of clogging indicator

D (see point 2.1)

Modification number

X the latest version is always supplied

Supplementary details

V for all VR indicators, for all VMF indicators only for types B, LE, LZ and C /-EX2G (all other VMF indicators have FKM seals as standard)
L..., LED, W (for descriptions, see point 2.1.)

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

HF4R

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Inline Filter or Pressure Filter for Manifold Mounting HF2P up to 100 l/min, up to 280 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

Standard equipment:

- bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Betamicon® (BN): 20 bar
Betamicon® (BH): 210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	280 bar
Fatigue strength	At nominal pressure 10 ⁶ cycles from 0 to nominal pressure
Temperature range	-30 °C to +100 °C
Material of filter head	EN-GJS
Material of filter bowl	Steel
Type of clogging indicator	VD (differential pressure measurement up to 420 bar operating pressure)
Pressure setting of the clogging indicator	5 bar (others on request)
Bypass cracking pressure	6 bar (others on request)

1.4 SEALS

NBR (=Perbunan)

1.5 INSTALLATION

Inline and manifold-mounted filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Without bypass valve
- Without port for clogging indicator

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

On request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

SSRF 160

SSRFD 160

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a bolt-on filter bowl.

Standard equipment:

- bypass valve
- connection for a clogging indicator
- oil drain plug in filter bowl

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BN4HC)	
"-SS-SO361":	20 bar
Betamicon®/	
Aquamicon®(BN/AM):	10 bar
Wire mesh (W/HC):	20 bar
Ecomicon® (ECON2):	10 bar

3. FILTER CALCULATION / SIZING

The total pressure drop of a filter at a certain flow rate Q is the sum of the housing Δp and the element Δp and is calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$$\Delta p_{\text{housing}} = (\text{see Point 3.1})$$

$$\Delta p_{\text{element}} = Q \cdot \frac{SK^*}{1000} \cdot \frac{\text{viscosity}}{30}$$

(*see Point 3.2)

For ease of calculation, our Filter Sizing Program is available on request free of charge.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

Size 30: 1/4" BSPP/NPT

Size 30: 1/2" BSPP/NPT

Size 60-110: 1/2" BSPP/NPT

Size 60-110: 3/4" BSPP/NPT

Size 60-240: 1" BSPP/NPT

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

Pressure Filter SSDF Pressure Filter for Reversible Oil Flow SSDF

up to 15 l/min, up to 700 bar

1. TECHNICAL SPECIFICATIONS

1.1 FILTER HOUSING

Construction

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl.

SSDF filters are suitable for flow in both directions.

Standard equipment:

- without bypass valve
- connection for a clogging indicator

1.2 FILTER ELEMENTS

HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO 2941
- ISO 2942
- ISO 2943
- ISO 3724
- ISO 3968
- ISO 11170
- ISO 16889

Filter elements are available with the following pressure stability values:

Optimicon® (ON):	20 bar
Betamicon® (BN4HC)	
/-SS-SO361:	20 bar
Betamicon® (BH4HC):	210 bar
Betamicon® (BH4HC)	
/-SS-SO361:	210 bar

1.3 FILTER SPECIFICATIONS

Nominal pressure	700 bar
Temperature range	-10 °C to +100 °C
Material of housing and cover plate	Stainless steel 1.4462 and 1.4404
Type of clogging indicator	VD (differential pressure indication up to 420 bar operating pressure) with ATEX directive Indication for higher differential pressures on request
Pressure setting of clogging indicator	SSDF: 5 bar SSDF: 8 bar (others on request)
Bypass cracking pressure (optional)	6 bar (others on request)

1.4 SEALS

FPM (Viton)

1.5 INSTALLATION

Inline filter

1.6 SPECIAL MODELS AND ACCESSORIES

- Seals in NBR, EPDM
- With bypass valve
- Without port for clogging indicator

1.7 SPARE PARTS

See Original Spare Parts List

1.8 CERTIFICATES AND APPROVALS

On request

1.9 COMPATIBILITY WITH HYDRAULIC FLUIDS ISO 2943

- Hydraulic oils H to HLPD DIN 51524
- Lubrication oils DIN 51517, API, ACEA, DIN 51515, ISO 6743
- Compressor oils DIN 51506
- Biodegradable operating fluids VDMA 24568 HETG, HEES, HEPG
- Fire-resistant fluids HFA, HFB, HFC and HFD
- Operating fluids with high water content (>50% water content) on request

1.10 IMPORTANT INFORMATION

- Filter housings must be earthed.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

NEW: Sizing online at www.hydac.com

3.1 Δp -Q HOUSING CURVES BASED ON ISO 3968

The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s. In this case, the differential pressure changes proportionally to the density.

Size 30: 1/4" BSPP/NPT

Size 30: 1/2" BSPP/NPT

Size 60-110: 1/2" BSPP/NPT

Size 60-110: 3/4" BSPP/NPT

Size 160: 1" BSPP/NPT

3.2 GRADIENT COEFFICIENTS (SK) FOR FILTER ELEMENTS

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

HYDAC

INTERNATIONAL

**Pre-Filtration
for Ultimate Cleanliness
and Efficiency:
HYDAC Diesel PreCare.**

Dual function: Diesel filtration + Water removal

E 7.125.2/11.16

HYDAC

557

Recipe for success: Constant progress.

Continuous product improvement is our driving force.

It is through product innovation and efficient solutions that we meet the steadily growing demands of our customers as leaders in technology.

With over 8,000 employees and over 500 sales and service partners we are in close contact with our customers all over the world.

Innovative solution and sound design.

Mobile machines and commercial vehicles are subject to the toughest working conditions all over the world. To ensure smooth running of vehicles and to protect both the engine and the whole drive system from damage, optimum diesel fuel conditioning is particularly important. With its new Diesel PreCare, HYDAC offers a modern system for diesel filtration which protects vehicle manufacturers and operators from failures, breakdowns and expensive service interventions.

Our solution "HYDAC Diesel PreCare", is a cup filter system available in two versions:

Manual water discharge (BestCost design)
The conventional, operator-dependent solution.

Fully automatic discharge Plug & Play (High Tech design)
The innovative solution for fully automatic dewatering, independent of the operator, even during suction-side operation.

Outstanding performance data achieved by 2-stage water removal and superb filtration characteristics through the use of synthetic media - these are the special features of these filters.

Both systems are designed for use as pre-filters on the suction-side and as such protect all the pumps and components in the fuel system from water and contamination.

Innovative diesel filter. In black and white:

SPECIFICATIONS

Flow rate:	BestCost design: up to 600 l/h HighTech design: up to 600 l/h
Temperature range:	BestCost design: -40 °C to +90 °C HighTech design: -20 °C to +90 °C
Nominal voltage:	24 V DC (option 12 V)
Rated power Fuel preheating:	300 W
Filtration rating:	Various (Standard: 10 µm)
Water separation efficiency:	> 95 % to ISO CD 16332
Operating pressure:	< 1 bar (suction-side application)

BestCost design

- Inlet / Outlet: M22x1.5 (others on request)
- Water discharge: manual drain plug
- Available in 2 sizes: HDP BC 340 and HDP BC 600

HighTech Design

- Inlet / Outlet: G^{3/4} (others on request)
- Water discharge: Automatic discharge unit (including electronic control, safety valve, pump and water sensor)

DIMENSIONS

DIMENSIONS

Reliable performance.

Unbeatable quality!

Compared to the competition, HYDAC Diesel PreCare shows clear advantages with regard to water removal and filtration performance.

Clean-side water removal using purely synthetic filter media combined with the hydrophobic barrier, has proved itself under the toughest conditions.

Competition: Massive water penetration after a test time of just 180 minutes.

HYDAC Diesel PreCare: Clean-side water removal using purely synthetic filter media combined with hydrophobic barrier has proved itself in comparison to the competition, and after a very long test time (730 minutes).

TÜV certified filtration system.

Both versions of the HYDAC Diesel PreCare Filtration System are certified by TÜV.

HYDAC Filbertechnik GmbH

Fuel filter, 340 l/h Fuel filter, 600 l/h

Test of fuel / water separation efficiency according to ISO CD 16332 (edition of 15.05.2009) and filtration efficiency using particle counting and contaminant retention capacity according to ISO 19438:2003, conducted at 300 / 600 l/h filter element

 E-Mail: fuel@hydac.com

HYDAC Diesel PreCare Product benefits.

- Low residues of diesel left in the filter element when servicing
- Compact design
- Reliable radial seal
- Captive seal design
- Visual analysis of the contamination possible (Rust, metallic swarf, unusual deposits, which require further investigation)
- Protection from imitations by means of Quality Protection
- Prevents first-line contamination by hard particles
- Prevents ingress of contamination as a result of corrosion

Reliable machine availability.

- Resulting from first-class contamination retention
- Due to highly effective and stable water removal on the clean-side for the entire life of the filter element
- Life-long efficiency, because at element change, the water removal stage is always replaced
- Due to the excellent water removal, (achieved by using first class materials) of >95 % to ISO/CD 16332

This comparison of three diesel samples after filtration provides the proof. Even with the naked eye the exceptional cleanliness of the diesel filtered with the HYDAC Diesel PreCare is obvious.

HYDAC

Diesel PreCare: The Clear

Guaranteed HYDAC quality

thanks to HYDAC Quality Protection.

TÜV Certification

Best cold start characteristics

due to low pressure drop
and cup filter design

Environmentally responsible

uses incinerable elements.

Outstanding water removal

achieved by the two-stage system.

Link between Diesel Fuel and Diesel Power.

High performance stability

Efficient water removal over the entire service life.

Element change = Complete overhaul

The water removal stage built into the element is replaced when the element is changed.

Extremely easy to maintain

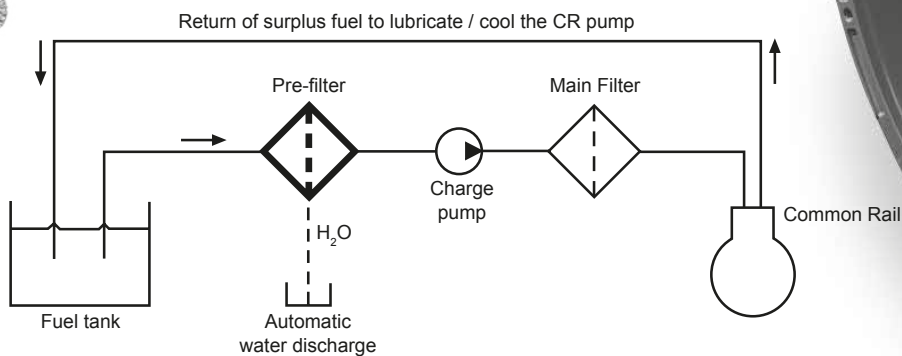

due to quick and simple element change.

Flexible in use

due to inlet/outlet options

Ready-to-use at any time

self-sufficient system, Plug & Play

Compact and Easy-to-Service.

New element technology: Fuelmicron Filter element with 2-stage system.

Element construction

Particle removal and droplet coalescence (1st Stage)

By using purely synthetic filter media, a high contamination retention capacity and steady coalescence is guaranteed.

Water removal (2nd Stage)

A hydrophobic barrier on the strainer tube guarantees reliable separation of the water droplets formed during Stage 1.

Filter element Fuelmicron

A new type of filter element in two-stage design which combines outstanding dewatering irrespective of the contamination level with excellent particle filtration at the same time.

Unique filter element design.

The Diesel PreCare in the BestCost design has a filter element with a **unique end cap design which is integral to its function.**

Function:

The end cap has separate fluid pathways so that the cleaned fuel flows to the clean side (ring channel in the filter housing), while the separated water collects in the water trap.

Increased operating reliability: achieved through strict separation of contaminated and clean sides.

No risk of contamination at the fluid outlet of the housing during element change because the clean-side and inlet-side channels are vertically parallel to each other.

Integrated Quality Protection: Highest level of reliability.

Unless an original HYDAC element is fitted in the housing, then the full function of the filter is not guaranteed

because element end cap which is integral to its function will be missing.

We prevent inferior quality imitation elements from being fitted because the element end cap design is critical to its function, and has **Quality Protection.**

As a consequence, we can always guarantee our customers proven and first-class HYDAC Quality.

Ultimate system protection and guaranteed operating reliability achieved through guaranteed spare part quality.

■ Fuel water mixture

■ Fuel

■ Water

Innovative Technology

Easy to service and environmentally sound.

Easy to service as the element can be changed in 3 simple steps:

1. Unscrew clogged element
2. Fit O-ring to new element and cover plate
3. Screw in new element

We are helping to protect our environment by using **fully incinerable filter elements (no metallic components)**.

HYDAC Diesel PreCare Customer Benefits.

General:

- **Great flexibility with regard to installation position**
since inlet and outlet can be in either direction
- **Consistent dewatering over the entire life of the filter element**
since water is removed on the clean side
- **Robust design**
thanks to aluminium housing

BestCost design:

- **Low investment costs**
due to cost-optimized design
- **Economical and technically reliable operation**
as a result of long element service life
- **Water sensor and fuel preheating available as options**

HighTech design:

- **Reliable dewatering**
thanks to automatic water discharge, even during suction-side operation
- **Small installation space required,**
since lower section of filter does not have to be accessible
- **Simple adaptation to the on-board power supply (Plug & Play)**
through the use of independently controlled water discharge
- **Ultimate in weather protection**
Robust design for the rough, long-term site operations

Development on a scientific basis.

In developing filter solutions to suit specific applications, HYDAC leaves nothing to chance. In addition to using the most up-to-date programs from CAD to FEM to make their designs, HYDAC invests heavily in the most modern research and test laboratories. Based on the results of scientific tests, efficient filters can be produced and tested systematically.

Development of filter and element to suit the specific application.

Tensiometers, Karl Fischer titration equipment, rinsing cabinets to determine component cleanliness, test rigs for multipass tests and water removal efficiency are in use on a daily basis.

These are just some of our in-house capabilities for testing and improving our products in addition to numerous other test and measuring equipment.

With filters which have passed through these test laboratories, you can be sure of success.

HYDAC Laboratory and test rig to determine the efficiency of water removal.

Oil analysis in the HYDAC Laboratory at company headquarters.

Just one example of the numerous filter testing procedures: Multipass test rig.

Diesel PreCare HDP up to 1800 l/h

1. TECHNICAL SPECIFICATIONS

1.1 FILTER

The Diesel PreCare is an innovative system for diesel prefiltration which protects vehicle manufacturers and operators against breakdowns, downtime and expensive service calls. The HYDAC solution "Diesel PreCare" is available as a cup filter in two versions:

- Manual water discharge (BestCost) - the conventional, operator-dependent solution
- Fully automatic water discharge Plug&Play (HighTech) - the innovative solution for fully automatic dewatering, independent of the operator, even during suction side operation.

1.2 FILTER ELEMENTS

The filter element Dieselmicron® features 2-stage water separation. HYDAC filter elements are validated and their quality is constantly monitored according to the following standards:

- ISO CD 16332
- ISO 19438

1.3 FILTER SPECIFICATIONS

Operating pressure	< 1 bar absolute
Flow rate	BestCost: up to 1800 l/h HighTech: up to 1800 l/h
Mounting thread	BestCost: M22x1.5; M27x2 HighTech: G 3/4 (others on request)
Temperature range	BestCost: -40 °C to +90 °C HighTech: -20 °C to +90 °C (extended temperature range on request)
Nominal voltage	24 V DC (optional 12 V)
Rated output Fuel pre-heating	up to approx. 300 W
Water separation efficiency	>95% in accordance with ISO CD 16332

1.4 SPECIAL MODELS AND ACCESSORIES

- Water sensor (present as standard on HDP "HighTech")
- Fuel pre-heating
- Clogging indicator (only HDP "HighTech")
- Multiple filter module (2-fold or 3-fold version) for higher service life or higher flow rate
- With integrated hand pump or electric pump (only HDP 600 BestCost and multiple modules)
- Others on request!

1.5 SPARE PARTS

See Original Spare Parts List

1.6 CERTIFICATES AND APPROVALS

On request

1.7 COMPATIBILITY WITH FUELS

Diesel, biodiesel (B0-B100),
(non-conductive)
Others on request.

1.8 MAINTENANCE INSTRUCTIONS

- Only for suction-side operation
- Filter housings must be earthed.
- When using electrical clogging indicators, the system must be disconnected from the power source before removing the clogging indicator plug.
- Due to the likelihood of freezing, there must be no restriction in the drain line. This is to compensate for the expansion.

Symbol for hydraulic systems

Return of surplus fuel to lubricate / cool the CR pump

Diesel MainCare HDM Diesel Fine Filtration for Engine-Side Installation

1. TECHNICAL SPECIFICATIONS

1.1 FILTER

Extremely high dirt holding capacity and filtration ratings which meet the requirements of modern injection systems are core features of our HYDAC Diesel MainCare (HDM) Standard series.

Easy installation and maintenance as well as excellent filtration performance for engine-side installation ensure this is the filter of choice for exacting end users.

The filter element is completely incinerable and the materials are used in an ecologically responsible manner.

1.2 FILTER ELEMENTS

The filter element (Dieselmicron®) is notable for its fully synthetic filter media.

For us, outstanding service life in conjunction with maximum filter efficiency is just as important as demonstrating excellent cold start characteristics and compatibility with all conventional diesel fuels.

In comparison to commonly available fuel filters, HYDAC Diesel MainCare filters are significantly more compact in size without any loss in service life.

Constant monitoring of the filter performance according to ISO 19438 and stringent criteria regarding component cleanliness are considered essential for state-of-the-art fine filters.

Diesel MainCare HDM Diesel Fine Filtration for Engine-Side Installation

1. DESCRIPTION

1.1 FILTER

Today's injection pressures of up to 3000 bar call for very high fuel cleanliness levels. Effective fine filtration is crucial to preserve the injection components. HYDAC Diesel MainCare was developed as a cup filter system to meet the stringent demands for fine filtration and achieves a cleanliness class of 12/9/6 even when subjected to engine vibration and load cycle changes. High capacity filter elements designed for specific applications and highly compact, complete filters form the basis of our products. Our products are also compatible with all standard mineral fuels and bio-fuels and demonstrate sustainability through the use of metal-free elements. Excellent cold-start characteristics, even when fuel has already thickened up, completes the picture.

1.2 PRODUCT ADVANTAGES

- Fitted with the latest Dieselmicron® element technology
- Increased operational reliability due to high-performance filter media
- Extremely easy to service due to simple, quick element changes
- Environmentally friendly due to incinerable filter elements
- Versatile in use due to flexible types of connection
- Cost-effective and efficient pipe installation due to optimised connection options in the housing

1. TECHNICAL SPECIFICATIONS

1.1 FILTER

The change-over Diesel PreCare is a modern system for diesel prefiltration which protects vehicle manufacturers and operators against breakdowns, downtimes and expensive service calls.

The change-over "Diesel PreCare" filters consist of a module with multiple filter housings. They are connected by a ball change-over valve with single-lever operation. The HYDAC solution is available in two versions:

- Manual water discharge (BestCost) - the conventional, operator-dependent solution
- Fully automatic discharge Plug&Play (HighTech) - the innovative solution for fully automatic dewatering, independent of the operator, even during suction-side operation.

MAINTENANCE INSTRUCTIONS for Hydraulic Filters

INSTRUCTIONS FOR USE FOR FILTERS

Information

This pressure equipment must only be operated in conjunction with a machine or system.

Information

The pressure equipment must only be used as stipulated in the operating instructions of the machine or system.

Information

This pressure equipment must only be operated using hydraulic or lubricating fluid.

Caution

The user must take appropriate action (e.g. venting) to prevent the formation of air pockets.

Caution

Repairs, maintenance work and commissioning must only be carried out by trained personnel.

Allow the pressure equipment to cool before handling.

The stipulations of the operating instructions of the machine or the system must be followed.

Danger

Caution: pressure equipment! Before any work is carried out on the pressure equipment, ensure the pressure chamber concerned (filter housing) is depressurized.

Danger

On no account must any modifications (welding, drilling, opening by force...) be carried out on the pressure equipment.

Information

It is the responsibility of the operator to comply with the water regulations of the country concerned.

Caution

Statutory accident prevention regulations, safety regulations and safety data sheets for fluids must be observed.

Caution

When working on, or in the vicinity of, hydraulic systems, naked flames, spark generation and smoking are forbidden.

Caution

Hydraulic oils and water-polluting fluids must not be allowed to enter the soil or watercourses or sewer systems. Please ensure safe and environmentally friendly disposal of hydraulic oils. The relevant regulations in the country concerned with regard to ground water pollution, used oil and waste must be complied with.

Caution

Whenever work is carried out on the filter, be prepared for hot oil to escape which can cause injury or scalding as a result of its high pressure or temperature.

Caution

Filter housings must be earthed.

Danger

When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

CUSTOMER INFORMATION IN RESPECT OF MACHINERY DIRECTIVE 2006/42/EC

Hydraulic filters are fluid power parts/ components and are therefore excluded from the scope of the Machinery Directive.

Before using these components, ensure compliance with the specifications provided by HYDAC Filbertechnik GmbH in this documentation.

The specifications also contain information on the relevant essential health and safety requirements (based on Machinery Directive 2006/42/EC) that are to be applied by the user.

We hereby declare that the filters are intended to be incorporated into machinery within the terms of the Machinery Directive 2006/42/EC.

It is prohibited to put the filters into service until the machinery as a whole is in conformity with the provisions of the Machinery Directive. Furthermore, our Terms of Sale and Delivery are available on our website (www.hydac.com).

GENERAL MAINTENANCE

This section describes maintenance work which must be carried out periodically. The operational safety and life expectancy of the filter, and whether it is ready for use, depend to a large extent on regular and careful maintenance.

MAINTENANCE PROCEDURES

- Spare parts must fulfil the technical requirements specified by the manufacturer. This is always guaranteed for original HYDAC spare parts.
- Keep tools, working area and equipment clean.
- After disassembling the filter, clean all parts, check for damage or wear and replace parts if necessary.
- When changing a filter element, a high level of cleanliness must be observed!

INTERVAL BETWEEN ELEMENT CHANGES

In principle we recommend that the filter element is changed after 1 year of operation at the latest.

We recommend fitting the filter with a clogging indicator (visual and/or electrical or electronic) to monitor the filter element.

If the clogging indicator responds, it is necessary to change or clean the filter element without delay (only W and V elements can be cleaned).

When no clogging indicator has been fitted, we recommend changing the elements at specific intervals. (The frequency of changing the filter elements depends on the filter design and the conditions under which the filter is operated). When filter elements are subject to high dynamic loading it may prove necessary to change them more frequently. The same applies when the hydraulic system is commissioned, repaired or when the oil is changed

The standard clogging indicators only respond when fluid is flowing through the filter. With electrical indicators the signal can also be converted into a continuous display on the control panel. In this case the continuous display must be switched off during a cold start or after changing the element.

If the clogging indicator responds during a cold start only, it is possible that the element does not yet need to be changed.

MAINTENANCE INSTRUCTIONS for Fuel Filters

INSTRUCTIONS FOR USE FOR FILTERS

This pressure equipment must only be put into operation in conjunction with a machine or system.

The pressure equipment must only be used as stipulated in the operating instructions of the machine or system.

This pressure equipment must only be operated using diesel fuel.

The user must take appropriate action (e.g. venting) to prevent the formation of air pockets.

Repairs, maintenance work and commissioning must only be carried out by trained personnel.

Allow the pressure equipment to cool before handling.
The stipulations of the operating instructions of the machine or the system must be followed.

Caution: pressure equipment! Before any work is carried out on the pressure equipment, ensure the pressure chamber concerned (filter housing) is depressurised.

On no account must any modifications (welding, drilling, opening by force...) be carried out on the pressure equipment.

It is the responsibility of the operator to comply with the water regulations of the country concerned.

Statutory accident prevention regulations, safety regulations and safety data sheets for fluids must be observed.

When working on, or in the vicinity of, fuel systems, naked flames, sparks and smoking are forbidden.

Fuels and water-polluting fluids must not be allowed to enter the soil or watercourses/ sewer systems. Please ensure safe and environmentally friendly disposal of fuels. The relevant regulations in the country concerned with regard to ground water pollution, used oil and waste must be complied with.

Whenever work is carried out on the filter, be prepared for hot fuel to escape which can cause injury or scalding as a result of its high pressure or temperature.

Filter housings must be earthed.

HYDAC is not liable for inappropriate use.

Ensure that the design specifications and parameters are adhered to.

The Diesel MainCare HDM is approved solely for use in technical applications. The device must not be used in situations where human lives depend on the correct functioning of the device.
